A sportsman's assurance of quality firearms— Remington craftsmanship

Here in Canada, heartland of North American shooting, the tradition of excellence in sporting firearms and ammunition is high indeed — thanks to the quality craftsmen of Remington Arms of Canada Limited. Sportsmen themselves, the men who make Canada's finest firearms use their experience in the field to help contribute materially to the shooting satisfaction of all other sportsmen.

The time-honoured craftsmanship with which their talented hands build Remington firearms is a sportsman's guarantee of satisfaction, whether he shoots just once in a while or for a whole season.

Many of these fine shotguns and rifles are now being manufactured in Canada; the Nylon 66 autoloading 22 and the Model 870 shotgun were the first. More are due to follow as production facilities expand.

So, if you want a quality firearm, made by Canadians for Canadians, and backed by more than 145 years of experience in the gun-making business, shoot Remington. Join the thousands of sportsmen who agree:

"If it's Remington, it's Right!"

"TRIGGER TALK" is a trade-mark

Editorial comment

The need for a truly Canadian gun book has been evident for some time. We discussed this need with Dave Wilson, president of Peterborough Guns Ltd. Fortunately, Dave's ideas on this matter parallelled our thinking. So much so, in fact, that he had already applied for a copyright for the name "Trigger Talk" as a trademark.

By making the considerable facilities of Peterborough Guns available for distribution purposes; and pledging the support of the gun experts associated with this organization, Dave made the production of this book possible now.

We are indeed grateful to Peterborough Guns Ltd. for the unqualified support they have given us. Also for permission to use the name "Trigger Talk" for our gun book.

We are also grateful for the enthusiasm indicated by Canada's noted hunters, championship shooters, conservationists, and others.

The various provincial departments throughout Canada, devoted to game and wildlife, have assisted us immeasurably.

We hope the first annual edition of "Trigger Talk" will fill it's role as the "Gun Book of Canada" — providing articles and information for Canadian hunters and shooters; and stimulating interest for sportsmen throughout the dominion.

Doug. Landry

LETTER FROM THE DISTRIBUTOR

GUNS LTD.

Gentlemen:

We at Peterborough Guns are indeed proud to have been chosen to assist in compiling the Gun section of "TRIGGER TALK"; also to be appointed the sole distributor of this new and very complete Canadian Gun Book.

Everyone recognizes the need for such a publication as this for Canada, a complete Gun Book with Canadian articles and Canadian prices. Our congratulations to publisher Doug Landry for fulfilling this need so capably.

MERCHANDISE IN THIS BOOK CAN BE PURCHASED ONLY AT YOUR LOCAL GUN DEALER

We hope you like the first edition of "TRIGGER TALK". Each year it will become larger and better. We are sure Mr. Landry will be grateful for any helpful suggestions and criticisms from you his readers, to help improve this publication from year to year.

GOOD READING GOOD HUNTING

Sincerely yours,

David A. Wilson,
President.

PROBLEMS OF GAME MANAGEMENT IN ONTARIO

D. N. Omand

It has been said that game management in North America is 90% management of people and 10% management of animals. Although the percentage may not be completely accurate, the comment is as true in Ontario as it is anywhere else on this continent.

The process of evolution by which the practice of game management has emerged from rule of thumb pronouncements, often based on incomplete or faulty observation, into a highly systematized scientific discipline, in which controlled experimentation adds continually to the total of knowledge of the field, has accelerated in recent years. There is a great deal to be learned, for the laws which govern populations of living things are infinitely more complicated than those which govern the behaviour of inanimate objects.

At the same time, a great deal of the knowledge which has been gained cannot be applied to the management problems which are encountered so frequently here. The wildlife resources are, by law, the property of the people of Ontario, and any action which is taken to manipulate these resources must have the full support of the people. It is here, if anywhere, that the wildlife or fishery manager has failed. He has not inspired the confidence in his knowledge and skill, which would surmount the doubts which arise in the mind of the general public, if any proposal is put forward which is contrary to established tradition.

A tradition of restriction has grown up around the management of fish and wild life resources in Ontario over the years of this century. Changes which took place in populations of wild life as the human population increased were immediately attributed to increased hunting pressure. The passenger pigeon is often cited as a classic example of the extermination of a species by man. In fact, the settlement of the country, the clearing of agricultural land, logging in the forest, draining of swamps, and all the other adjuncts of civilization made drastic changes in the habitat upon which the animals and fish depended. For some species, the changes were a vast improvement. Deer were able to invade areas of the province where they were unknown before as logging and burning converted over-mature hardwood forests to young mixed wood stands, and opened up the canopy of tree tops which previously covered the majority of Pre Cambrian Shield. The brush wolf was unknown in much of Ontario before farms were cleared at the forest edge.

For other species, these changes were catastrophic and left no alternative but a retreat into those areas of the Province in which the human invasion had had the least effect. The moose, the fisher, the marten, the lynx, virtually disappeared from many of their former haunts. Many species of fish were drastically affected by siltation and pollution of spawning streams.

The effect of these changes was attributed to predation by man, and the answer was clearly to restrict, and if possible, halt these predatory processes. Bag limits and seasons were imposed and all sorts of restrictions applied to discourage and complicate the hunting and fishing process. This tradition is with us to-day, and at present it constitutes one of the most serious obstacles to a rational game and fish management program in the Province.

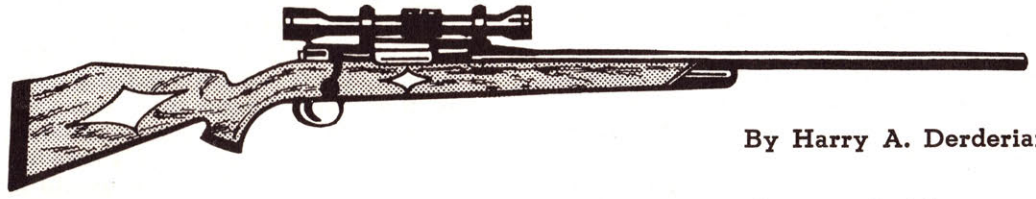
We know now, that the upheaval in wild life and fish populations which followed the early opening up of the Province was due to the change in the face of the land, much more than to the direct impact of humans upon animals. We know that all species of fish and most species of animals have the potential to restore depleted populations with startling speed under suitable habitat conditions. We know that diminishing return halts the process of depletion by hunting or fishing long before a critical level is reached. We know that animals, in the wild, have a very short life span under the best of conditions, and animals which man is prohibited from utilizing now will almost certainly be dead from starvation, disease, old age, or some other natural cause in a few years. We know that in some lakes fish could not grow to the minimum size limit established by law because protection had caused them to be so numerous that they depleted their own food supply.

A logical application of these facts, and hundreds of others in the same vein, to a fish and wildlife management program would, of course, lead directly to liberalization of fish and game regulations. Longer seasons, greater bag limits and fewer restrictions would be the result. Over most of the North American continent, game and fish managers are doing everything in their power to convince the public that such a program is highly desirable. In very limited fields, they have succeeded. The state of Ohio now has very few restrictions on fishing, for example. Some liberalization of deer seasons in Michigan and Wisconsin has resulted from an elaborate publicity program on these lines. But in the main, the public eyes will distrust any attempt to remove any of the shackles which bind the angler or the hunter especially when experience and memory lead back to a period of greater abundance before the face of the land had changed.

Here in Ontario, minimum size limits on some species of fish have been removed, and seasons have been lengthened on some species of game birds. With increasing knowledge of the numbers and distribution of moose, it has been possible to open the season on this animal south of the French and Mattawa rivers. Longer seasons on deer have been proposed, as well as deer shoots in concentration areas where the deer population far exceeds the capacity of the land to produce food to sustain it over the winter.

These changes, we hope, indicate a trend which will accelerate as the years go by. They are small in themselves, and the information at present available to the game manager would legitimately carry him much further along the road to liberal management programs. However, he cannot get out of step with public opinion, and his most important problem is now, and will be for some years to come, the leading of public opinion along the same road.

HAVE GUN - WANT TO SHOOT



By Harry A. Derderian

As most gun owners and hunters are aware our American counterparts have been fighting a desperate battle against the creeping encroachment of legislation on their shooting activities. They have had the good fortune of stout support from the National Rifle Association, which has made a mighty attempt to keep tab on proposed restrictive Bills which keep finding their way on to the floor of the State and Federal Legislatures. The N.R.A. has over the years kept its shooters informed on the progress of these prohibitive Bills and has interpreted the effects of them so clearly that the American gun enthusiast had a fairly clear course laid out for him in his fight against their passage into law. As a result, they have managed to preserve a goodly portion of their hunting and shooting activities, but one fact stands out clearly in America—the war is not won, only most of the battles. Attempts are still being made, as determinedly as ever, to little by little strangle the right to own and shoot arms.

If this situation is a stark reality in America, where the possession and use of arms is incorporated directly into the Constitution in clear language without ambiguity then where do we the Canadian gun owners and hunters stand? Up to a few months ago we did not have even a Bill of Rights in Canada. To-day we have a Bill of Rights, but there is a marked difference between ours and that of the United States of America.

The Constitution of the United States of America was a direct product of the birth of a new nation on the eve of its realization as an entity. Gunsmoke still practically wafted about after the pangs of its emergence and no one had a doubt in the world as to who or what had made possible this happy event. It was the armed citizenry who had risen up in wrath and indignation and turned its knowledge of stalking and shooting to the establishment of the new nation America. Is it any wonder therefore that the Constitution would acknowledge this tremendous debt to its gun-loving citizens and seek to establish the rights of these citizen warriors to their arms as a deterrent to those who would try to overthrow its new found freedom.

The American Constitution by its wording in reference to the right of every citizen to own and use firearms, was intended to make it impossible to destroy this right by the law-makers who might later seek to little by little encroach upon and finally take away this built-in deterrent to despotic government. In Canada no such specific right is given in our Bill of Rights, and so as a result our position is so much the weaker. If, in spite of the right given to each American to own arms, he is still put to a desperate battle to preserve this right, then our fight in Canada is certain to be many times more difficult.

We are open to any interpretation being rendered with regard to the ownership and use of arms as may be expedient to the interests of the lawmakers and the Courts from time to time. It is therefore incumbent upon us all who are interested in guns and shooting to speak up in a loud, clear voice whenever and wherever any person or group seeks to impose restrictions upon us and our sport.

Remember that Bills proposing gun restrictions are always presented in a manner and in such language as to cloud the real purpose that they hope to achieve.

Many anti-gun laws are proposed by persons or groups who believe that these laws will prevent crime and shootings, acci-

dental or otherwise, and there are others proposed by groups or individuals who attempt through legislation to assist the police in the arrest and conviction of criminals. No doubt some are advanced by those who would like to see our society disarmed. In any event present-day gun legislation is channelled in the wrong direction. It seeks to disarm the law-abiding citizen, who after all is the only one who will obey the law, and it fails totally in its avowed purpose of disarming the criminal element. It seeks to abolish and outlaw the gun which is in itself incapable of doing wrong, instead of meting out the just deserts to the criminal who uses the gun in his unlawful pursuit. It must be obvious to any reasonable person, although the principle seems to escape the proponents of restrictive gun legislation, that no legislation can prevent thugs from securing arms. It was only a few years back that a military establishment was broken into and a goodly number of semi-automatic pistols and submachine weapons were stolen along with a large quantity of ammunition.

Just as shooting accidents cannot be eradicated by the passing of a law aimed at the gun, neither can crime be stamped out by a similar approach. It is the man behind the gun who triggers the shot, and just as with traffic accidents the problem boils down to education, not eradication.

Here, the Clubs come into their own, and if it is a properly run Club its senior members will see to it that all junior or new members progress through a course of instruction in the handling and use of arms. Outside of the Clubs, we who are bringing up our children to face the facts of life should undertake the responsibility of educating our boys and girls in the handling and use of arms.

We on this continent who have grown smug in the knowledge that we are a free people living in the lap of luxury, should not lose sight of the fact that the world about us is growing ever smaller. We are no longer safe from the economic and military pressures which once might have seemed remote.

We must be vigilant as a nation and as individual men and women to see to it that our guard is never down. Weakness invites attack but strength lends strong support to sane argument. We must never permit ourselves to be disarmed, content in the belief that our armed forces will take care of emergencies. England had already reached that state of placid acceptance when hostilities broke out in 1939. I suppose all of us know something about what happened at Dunkirk. We might also have some dim recollection that the effect of the Dunkirk evacuation was felt in Canada in a most direct way.

It seemed that over a period of years England had been imposing one restriction after another on the country's gun enthusiasts, until the point had been reached where very very few weapons remained in the hands of the citizen for either self-defence or hunting purposes. England felt that the use of firearms was the sole and exclusive prerogative of the soldier and those citizens of affluence who could afford the prohibitively expensive hobby of possessing arms. It seems however that after the Dunkirk evacuation practically all the military arms possessed by England at that time had to be left on the beaches in France as there was not sufficient time nor shipping space to carry these arms out. England therefore found herself exposed to military disaster by invasion with only unarmed citizens and soldiers to defend her.

What could they do? Germany was armed to the teeth and threshing about under the heady smell of victory. Who or what could stave them off? The United States of America was as yet not too far underway in its defence production and had very little arms surplus to ship to England. England's own arms industry was just getting underway but as they well knew time was running out rapidly and something had to be done immediately. A call was made to Canada for weapons, any weapons at all, which would lend themselves to the defence of England. This call was promptly answered and in such a manner as to reflect everlasting credit upon the Canadian gun enthusiast. There were literally hundreds of thousands of pieces turned in to the local police stations by the peaceloving gun enthusiasts of Canada, and they were promptly shipped to England and used to arm the Home Guard units and militia upon whose shoulders a direct invasion attack on England would have fallen.

These sporting arms, rifles, revolvers and shotguns no doubt contributed greatly to the confidence of the English in their ability to defend their land.

If the citizens of Canada had also been disarmed what would the English have done? There might not have been a sufficient deterent to an invasion attempt even in spite of the fact that British Fleet commanded the Channel.

A well-armed and trained civilian body is a reserve of strength to any country in time of war or unrest. We are all familiar with the word "guerilla", and that peculiar successful pattern of warfare which it represents. It is well known that a small body of these guerillas with only small arms have not only tied up large units of enemy regular troops but have actually inflicted defeat upon them.

Castro, of Cuba, overthrew the regular government in spite of the naval and air force units which were at the disposal of the government to back up the regular army. Algerian rebels not only held out against France but fought so hard and successfully that it compelled France to seek peaceable solutions to the problems they share.

Fighting in the next major war will almost certainly be visited upon our own soil, and if this should come to pass all our ablebodied citizens will come face to face

with the moment of truth and it will be incumbent upon all of us when called upon in this event to exercise all of our faculties, knowledge and energy to a degree never before required.

It is important therefore that the civilians who will be carrying on the fight at home be trained and fully familiar with the use of personal arms. More and more the individual civilian will be compelled toward self-reliance and the greater his proficiency with small personal firearms the greater will be his contribution to the defence of our soil, and the greater his chance of survival. After all, the tiny country of Finland managed to hold off the mighty Russian effort to devour it for more than a year, and in fact never actually suffered total defeat at the hands of the Russians. A small nation cannot afford the luxury of a huge military establishment and the only logical alternative is a well-armed, trained and determined citizenry, which could be called upon in a national emergency such as in Finland to perform the task of defence.

We cannot afford the luxury of sitting back and allowing our sport and recreation to be little by little written off at the pleasure of the anti-gun groups. The knowledge and proficiency of our shooting citizens is too valuable to be lost to our nation. Let us see to it that our present generation is prepared to meet the challenge of our time with the same skill, determination and courage, as the people of Finland met their's. That little country of Finland gained the respect and admiration of the world by her stand against Russia, and should the necessity arise we in Canada should be prepared to fight and sacrifice to preserve our way of life and our beliefs with equal determination.

SKINNING OUT MOOSE - photo by Newfoundland Tourist Development

NEWFOUNDLAND

Canada's most easterly province, Newfoundland, offers one of the nation's finest hunting areas.

In the line of game animals are moose, caribou, bear and rabbit. About 5,000 moose are taken each year and while many fewer caribou are shot, the excellence of their heads makes them a fine trophy for the hunter. The bear and rabbits are also plentiful and supply good shooting and fine yields.

The shotgun hunter is furnished with good sport by snipe, wild geese and a large variety of ducks.

—Around the turn of the century there was not a single moose on the Island of Newfoundland!

It was not until the introduction of six pairs of moose to the woods of the Island that this animal came to Newfoundland. It is now estimated that the moose population on the 17,000 square miles of good range in Newfoundland is 2.5 animals per square mile.

TRIGGER TALK—Are moose getting tame?

There are many who believe they are. After all there is no longer any untouched wilderness. Wood-cutting operations are everywhere. Tractors, bull-dozers, chain saws are splitting the silence of the woods and if moose became frightened every time they heard a noise they would go crazy.

If they ran every time they saw a woodsman, fisherman, hunter, canoest or traveller in the woods they would be running all the time.

Civilization in other words is closing in on the moose and it isn't doing him any good.

PRINCE EDWARD ISLAND

P.E.I., the smallest province of Canada, is intensely cultivated. For this reason, no game animals are left and only wildfowl shooting is to be had. The many small farm woodlots for cover and the plentiful supply of food, however, makes this sport an excellent draw for the island and visiting hunters. Hungarian partridge, ruffed grouse and ring-necked pheasant are usually plentiful and yield good shoots. Waterfowl shooting along the province coastline is, for the most part, fairly good.

BIRD SANCTUARY - P.E.I. TRAVEL BUREAU

NOVA SCOTIA

Fleet, handsome, white-tailed—the Virginia deer is the principal game animal in Nova Scotia. The Virginia is found in numbers throughout this Atlantic Province and is a very popular quarry. The annual bag in Nova Scotia racks up a score like 35,000 to 40,000 Virginia deer during the Fall open season.

Another popular game animal in Nova Scotia is the varying hare or snowshoe rabbit. Larger than the cottontail rabbit it inhabits all kinds of Nova Scotia woodlands. Here is a prolific breeder—a specie of wild life adept at concealment. The snowshoe rabbit is an ambitious quest for hunters and while it is subject from natural causes to variations in abundance it supports hunting pressure without difficulty and is usually common to abundant in population.

But the deer and the rabbit are not the sum total of targets for Nova Scotia hunters —what about some of the more or less predatory animals — the black bear, the wild cat or bobcat, the red fox and the raccoon. Seasoned hunters in the Nova Scotia woodlands and forests caution others to develop hunting plans in consultation with a guide or outfitter who is familiar with local conditions.

Game birds also provide thrilling sport in Nova Scotia. Of the two kinds of native grouse or "partridge", Spruce Grouse are protected through the year because they are so fearless and simpleminded that without that protection they would soon be exterminated. The hunting of Ruffled Grouse and Birch Partridge, common game birds, is permitted.

The Common Pheasant and the Gray or Hungarian Partridge have both been introduced successfully into suitable areas of Nova Scotia where they provide good sport.

Some sportsmen hail the hunting of the wise and self-reliant Canada Goose as the best of field sport. Nova Scotia lies on the Atlantic migration route of flocks of Canada Geese passing between northeastern breeding grounds and New England. First-class hunting for these noble birds is enjoyed about shallow harbours and some of the lakes in the province. Annually several thousand Canada Geese winter on the southwestern coast of Nova Scotia where tidal feeding-grounds provide them with eelgrass rootstocks and other food through the cold season.

Teal, Whistlers, Bluebills, Buffleheads, Eiders, Scoters and Black Ducks are all seen down the barrels of hunters but it is the Black Duck that gets the most buckshot! These game birds are hunted extensively through the province, are common in many areas and are considered unexcelled for sporting qualities and for the hunters dinner table.

TRIGGER TALK ——

Two phenomena occur every time you go out on a winter's day hunt. The hunter perspires with the exertion of rambling over the hunt area and he becomes aware of this fact. But there are still those hunters who have little or no nowledge of the fact that guns sweat!

On a cold day in winter a gun feels the feathery touch of a snowflake, a drop of rain, the brush of sleet on the barrel. Moisture infiltrates the air in the barrel.

Home from the hunt the hunter comes and the first thing the neophyte does is stand the gun in the corner or return it to his newly purchased gun holder or rack. And the gun suffers for it — man how it sweats. From freezing temperatures to a radiant heated house.

No matter what game you are after and did or did not get — fox, rabbit, wolf — never let the day or night pass by without cleaning your gun.

A gun that is allowed to sweat it out without getting any treatment is the gun that ultimately winds up with a badly rusted condition.

Now no gun can sweat it out standing in the back shed or leaning up against the garage wall — you couldn't. So why not find a respectably warm place! Is your gun a takedown model — then take it down. When it is completely thawed out — wipe it clean.

This is no hurry up job. Let it dry. Now you are ready to run a cleaning rag over the whole gun — and down the barrel. Hoppe's solvent does a good job here.

Don't put that gun away! You are not finished. Wipe the gun clean and then take an oily rag and run it down the barrel and over the gun.

Now Mr. Hunter — head for the shower, a good hot bath and towelling you have done your good deed for your gun!

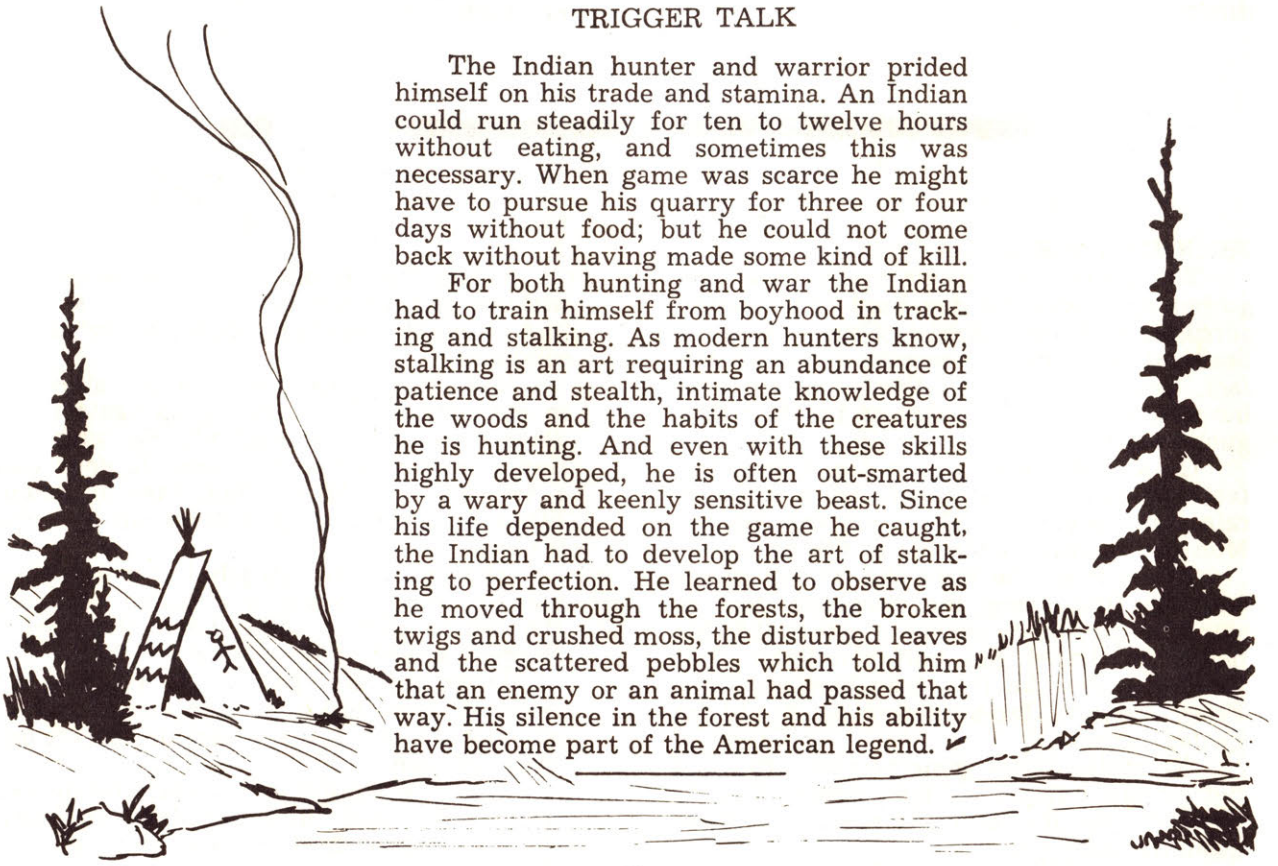
NEW BRUNSWICK

New Brunswick, the second largest of the Maritime Provinces, has over 14 million acres of woodland, and this, coupled with a network of waterways provides ideal conditions for game animals and wildfowl.

Vast, unbroken, interior tracts offer cover for white-tailed deer and black bear. Both of these animals are hunted, in season, with great success. The moose of the province, while on the increase, are still on the protected list.

Not on the protected list are the large numbers and great varieties of upland and water birds. Ruffed grouse are plentiful and the woodcock hunting is as good as anywhere on this continent. The hunting of migratory birds, such as ducks, geese and many others, is excellent on all the province's waterways and along the bays and estuaries of the coast.

Photo—Canadian Government Travel Bureau



TRIGGER TALK

The Indian hunter and warrior prided himself on his trade and stamina. An Indian could run steadily for ten to twelve hours without eating, and sometimes this was necessary. When game was scarce he might have to pursue his quarry for three or four days without food; but he could not come back without having made some kind of kill.

For both hunting and war the Indian had to train himself from boyhood in tracking and stalking. As modern hunters know, stalking is an art requiring an abundance of patience and stealth, intimate knowledge of the woods and the habits of the creatures he is hunting. And even with these skills highly developed, he is often out-smarted by a wary and keenly sensitive beast. Since his life depended on the game he caught, the Indian had to develop the art of stalking to perfection. He learned to observe as he moved through the forests, the broken twigs and crushed moss, the disturbed leaves and the scattered pebbles which told him that an enemy or an animal had passed that way. His silence in the forest and his ability have become part of the American legend.

QUEBEC

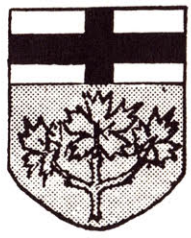
Quebec, Canada's largest province, with the majority of its population concentrated in the south, is still, in its northern reaches, a land left in its natural state. In the greater part of its vast forested area, dotted with lakes and laced with rivers, the game animals and wildfowl live and sustain their population fairly safe from the inroads of civilization.

While some areas of the province are under lease to private clubs or groups for hunting purposes, large areas are still open to hunters with licences and the age-old desire to hunt. Hunting deer with dogs is prohibited in Quebec but "still-hunting" or "stalking" still provide good yields. Moose, bear and wolf also present their challenge to the hunter in this province.

Ducks, geese and other waterfowl, along with excellent partridge hunting provide the shotgun hunter good sport and high yield.

Photo—Canadian Government Travel Bureau

ONTARIO



WHITE TAILS & BLUE TICKS

by J. E. MILLHOFER

What enthusiastic shotgunner has not felt his blood pressure rise to the boiling point on hearing a beagle's excited voice on a fresh cottontail track? And when the beagle comes perceptably closer until he's sure Mr. Cottontail will come busting into his vision, Joe Shotgunner's fondest dream comes true.

Multiply that thrill at least five-fold and you have a reasonable facsimile of the same sport but with big game as the quarry. Unless you hunt in the province of Ontario however, you had better not sample this somewhat novel method of deer hunting. Ontario alone among the Canadian provinces, and a very few states south of the border, permit the hunting of the white tail with dogs and this unique system offers sustained thrills that only the chase can offer.

This does not mean to imply that still-hunting or stalking is second rate. In fact, considerable more skill, patience, and endurance is required of the lone hunter and when he does bag his deer, his is undoubtedly the greater accomplishment. But it is doubtful that he enjoys the heart pounding excitement that dog driven deer provide. Although the deer will not generally circle as the cottontail will when being chased by dogs, he will often change course frequently and in so doing, he may offer himself as a target for more than one shooter. It is not unusual for a chase to go on for 20 minutes and more with dogs barking in every key, and every hunter in the line is sure that the whole pack with game in front of it, is bound to run right up his gun barrel. A strong man's knees can turn to jelly and buck fever is the lot of the uninitiated under these conditions.

Even the firing of a gun further up the line does not quiet the tingling nerves of our excited watcher. He is sure that his buddy has missed and that even now the deer has turned and is heading his way. Only when the dogs stop their racket at the kill or else are heard to be growing fainter and fainter in the distance signifying that the deer is through the line and heading for faraway places, is he sure that this was not his day. His only thought then becomes "How soon can we start another run?"

The methods used are usually of the same pattern. The hunters string themselves out in a line or horseshoe, a safe distance between each man, and find a comfortable place to sit with the best field of vision available. With Ontario bush conditions, the latter is often limited to 50 or 60 yards. When the guide or the dog-man is reasonably sure that each man is on his watch, he releases the dogs and begins his trek from a point distant enough from the line to cover a substantial piece of what he hopes to be, productive bush. He zigs and zags back and forth toward the line of watchers until he or the dogs pick up a fresh track or visibly put up the deer. The chase is then on and if the plans have been properly laid, and if the deer co-operates, he should provide the waiting hunters with their shot.

Any dog with four legs and a voice can be found in deer camp but blue ticks, plott hounds, red bones, beagles, or a mixture thereof, generally turn out best. Speed is important in a good deer hound. If he is too fast, the deer will "bee-line" out of the country in high gear, may void the line, and at best will present a difficult fast-moving target. If the hound is built too close to the ground and is consequently too slow, the deer will not be pushed, will be super-cautious and may wind or hear the men on watch and slip through. A happy medium hound will push the deer just fast enough to keep him concentrating on his tormentor and not on possible danger ahead; he will bound along at a good pace but not at an express train speed so that a good, clean, killing shot is made possible. Really first rate deer hounds who will ignore all but deer and who will come back after a reasonable length of time if the deer makes good his escape, are not easy to come by and their owners are not often open to propositions.

The best deer mutt this deer buff had the pleasure of hunting with was a common, garden variety, farm dog whose parentage was obscured by an indiscreet collie bitch. He would disdain a rabbit or a fox track with cold aloofness but a deer track held his interest until no more than 5 minutes after he passed through the line if the deer should be so lucky. To a hound fancier, his voice was atrocious but to a man on watch in front of him, it was music beyond compare. Laddie was so intent on his work that it finally became his undoing. After many years of yoeman service, he finally packed it up. On a particularly fast chase, he ran into a sharp wind-fall limb, drove it into his chest and died with his boots on.

Almost every type of rifle and calibre can be found in the bush when the season is under way but a marked swing to heavier, more modern calibres is apparent among white tail hunters in Ontario. Of particular interest is the new REMINGTON slide action carbine. At 6½ pounds it is not a burden to carry and in spite of its light weight, its recoil is remarkably soft. Its 38½ inch over-

all length makes for an extremely fast handling and easy pointing weapon and these factors have already resulted in excellent acceptance as the long awaited ideal bush gun with modern, hard-hitting calibres. The new 280 Rem calibre is likewise gaining ground as a deer-slayer, par-excellence. The 165 grain bullet in this calibre can cut brush and deliver the punch that guarantees an immobilized target and not one that is wounded only to suffer a lingering death. The 280 has the added advantage of being one of the best all-round cartridges available. In four excellent bullet weights, it is ideal for everything from ground hogs to moose.

It has been said that hunting deer with dogs is not sporting and some rash souls contend that the proverbial fish in the barrel has the same chance as a chased deer. These remarks must have originally been made by someone who has never had the opportunity to partake of this type of deer hunting. The deer has yet to be born who can't outsmart a group of hunters and dogs in Northern Ontario. The typical white tail country of Northern Ontario can only be compared to tropical jungle for dense, almost impenetrable bush, extremely limited vision, and to make matters worse, it's as noisy underfoot as the Toronto subway during rush hour. Put a still hunter or stalker in it and I'll put my money on the deer and give odds. A string of men and good dogs evens the odds considerably, but even under these conditions fewer deer wind up on the dining room table than those who go on nipping buds in the hard woods.

There may be more deer in Nova Scotia, there may be bigger deer in Alberta, the scenery in the B.C. deer country can't be beaten, but if it's thrills you're looking for, you had better try Northern Ontario white tails with a pack of noisy hounds on his tracks.

MANITOBA

Manitoba, the most easterly of the Prairie Provinces, has long been famous for its waterfowl shooting and some of the greatest wildfowl breeding grounds in America are located here. Duck, geese, ptarmigan, snipe, grouse and many others are to be found in abundance.

Although Manitoba is referred to as a prairie province, about 75 per cent of its area is wooded, providing excellent cover for moose, white-tails, mule deer, bear and wolf. In season these animals present the hunter with all he could desire in adventure and yield.

SASKATCHEWAN

In the heart of the "Big Duck Factory" of North America, Saskatchewan affords excellent hunting for over 50,000 hunters a year. As well as waterfowl, the shotgun enthusiast can find excitement in trying his skill against the swift, explosive flight of the Hungarian partridge. Pin-tail grouse or "Prairie-chickens" are plentiful and provide tops in hunting. Because of their small numbers and the need to sustain their population, pheasants and sage grouse are protected by short season hunting but ruffed grouse and spruce grouse are plentiful and provide good hunting.

White-tailed deer and to a lesser extent mule deer, are found in the province. The moose has made a strong comeback in recent years to the degree that there are now two separate moose seasons with good kills reported.

Black bear are very plentiful in the wooded section of Saskatchewan and a year-round season and bag limit of four, for non-residents, draw many hunters.

For the most part, though, the waterfowl shooting still is the province's biggest draw to the hunter and the full length of the season provides full limit shooting.

Photo—National Film Board of Canada

ALBERTA

With its prairie grasslands to the south, the gently rolling aspen-treed country of the north, and the foothills merging into craggy mountains to the west, Alberta presents a veritable hunter's dream.

For gamebird shooting, no area of Canada offers the hunter a greater variety or opportunity for "limit" shooting as does Alberta. On the uplands pheasant, grouse and partridge abound; while the water areas present excellent shooting for the duck and goose fancier. The variety of ducks and their great numbers draw hunters from far and near for autumn shooting. On many days in the fall migrating ducks and geese can be seen flying in an almost unbroken line from horizon to horizon.

The big game hunter is not neglected by Alberta either. Two species of deer, the Rocky Mt. mule deer and the white tail, along with moose, elk, bighorn sheep, mt. goat, antelope, caribou, grizzly bear, and even buffalo are hunted and present excellent yield to the hunter.

BRITISH COLUMBIA

British Columbia Government Photograph

British Columbia, large, mountains, for the most part unsettled and almost inacessible—a land of dense forests, soaring mountain peaks and rushing streams—offers the hunter a paradise of adventure.

The game of B.C. includes a great many varieties and a great many record trophies have been taken.

The hunting territory of B.C. is so vast and varied that it can best be described by naming the region and offering the game which it is most likely to produce.

WEST COAST—This area includes the rough mountainous coastal area and the islands along the coast.

In this region are excellent opportunities for goat, mt. sheep, bear and in some sections wapiti have been shot.

This is also a good wildfowl district,, with blue and ruffed grouse, duck, goose, snipe, pheasant, partridge and quail in abundance.

SOUTHERN INTERIOR — Accessibility and a plentiful supply of such game as mt. sheep, mt. goat, mule deer, black and grizzly bear, as well as a full range of wildfowl makes this region one of B.C.'s most popular hunting districts.

THE KOOTENAY—Difficult to reach and hard to hunt over this area consistently produces some of British Columbia's finest trophies in such game as moose, wapiti, caribou, mt. goat, mt. sheep, deer and bear. The game birds of this area include grouse, ducks and geese.

CENTRAL INTERIOR—From the rail lines access points to this area lead to excellent hunting grounds with bear, deer, moose, mt. goat, mt. sheep and caribou in abundance. Ducks, geese, snipe and grouse are the main game birds for the shotgun enthusiast.

NORTHERN INTERIOR—This district because of its inaccessibility abounds in most of the larger game animals found in the province. Mt. sheep, mt. goat, grizzly and black bear, mouse, caribou and wolf make their stand here as do many wildfowl including, ptarmigan, grouse, prairie chicken and duck.

To reach the better areas here often takes as much as fifteen days of arduous travel.

PEACE RIVER—Caribou, moose, Mt. sheep, Mt. goat, bear and many species of wildfowl are found here in abundance, but difficulty of travel and transportation have kept this region mostly untouched to date.

YUKON

For the sportsman seeking new frontiers to conquer, the Yukon Territory offers a full measure of attractions with its vast uncharted area.

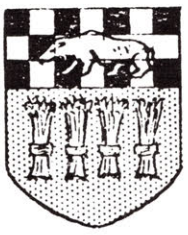
One of the most prized trophies for the hunter in this region is the mountain sheep, of which there are three species to be found in the Yukon namely; the Dalls, Fannin and Stone Sheep. In the St. Elias and Coast Mountains the Dall is plentiful also in the McKenzie Mts. and the Ogilvie and Selwyn Ranges. The Stone sheep are to be found mostly in southwestern Yukon, while the Fannin use the Yukon and Pelly River areas.

Other species of big game are the mountain goat of the Coast Range, moose, barren ground and woodland caribou, grizzly and black bear.

Five varieties of grouse, three of ptarmigan are found in the higher regions. September and October provides good waterfowl shooting in the lower areas.

Climate and soil conditions of the Yukon tend to encourage a phenomenal bone growth in the larger game animals and record heads of moose, sheep, goat and caribou have been taken here. The Yukon still holds Canada's all time record for a moose head and the world's record white Dall's sheep.

NORTHWEST TERRITORIES



In the Northwest Territories, the only game animal hunted is the buffalo and that on special licence only.

For the rest the hunter mostly seeks certain game birds in season. These include various species of grouse, prairie chicken, and ptarmigan. Good shooting for ducks and geese can also be enjoyed in this far northern land.

BUFFALO HUNT

Alan Dawson,
The Globe and Mail
Toronto.

The biggest game in North America and a visit to one of the continent's last frontiers —what more could any outdoorsman ask?

That's buffalo hunting in the Northwest Territories, now open for a few weeks each fall in the area north of Fort Smith, the capital of the Territories. It's a country of huge rivers rolling north to the Arctic, of great billiard-table plains waist deep in coarse grass, of endless miles of scrub poplar, birch and evergreens. And game—moose, bear, geese, ducks and so many grouse that they are often seen strolling down the dusty streets of the capital.

To the south lies Wood Buffalo National Park, as big as the entire province of Nova Scotia, and the home of the birds two nations have banded together to protect—the fabulous five-foot snowy whooping cranes. They nest in the park, flying north each year from their winter refuge on the Gulf of Mexico and Ed Olsen, superintendent of the parks, says the Pentagon and Ottawa alike may send out frantic vibrations at the slightest hint of harm to any of these last three or four dozen whoopers in the world.

But Ed Olsen's true love are the 20,000 unlovely black shaggy wood buffalo he cares for in the vast meadows of the park. By careful herd management, helicopter roundups and a program of TB testing and inoculating he's gradually weeding out the weaklings, the sick animals and the poorer prairie strain that some misguided person introduced among the verile wood buffalo 35 years ago.

About 4,000 buffalo have spilled out of the borders of the Wood Buffalo Park in a northerly direction, to thrive and grow fat and propogate in the lush meadows along the banks of the mighty Slave River. Here they roll in the wallows, caking their hairy hides with thick black mud to ward off the clouds of flies in the spring and summer—flies that killed cattle or left them more emaciated than when they came to the area, despite the rich feeding.

In the winter the buffalo brush the snow aside with their shaggy heads and short thick horns, to get at the grass beneath. And so they thrive all year round, unmolested, apart from the timber wolves, since 1893 when all hunting of them was forbidden lest they become extinct.

Now once again man is their enemy but in the bright sunny September morning of 1959 when I rode out to the meadows to become the first hunter of the 20th century to bag a wild buffalo they did not know this. It was not difficult to ride through woods to within a quarter mile of two bulls grazing in a great meadow. We tied the horses and two of us — Bruce Thompson of Burns Lake, B.C., and I — crept to within a couple of hundred yards of the pair.

Bruce was using his .375 H. and H., a Model 70 he had re-stocked, and his own handloads; I had my Epps custom .30-06 with 200-grain pointed soft point handloads. He had installed peep sights, I had a 2X-7X Weatherby scope.

I was sighted in for 200 yards and I guessed that to be the range; I held the hairs on the bulls ribs just behind the shoulder and squeezed off a shot. My animal gave no sign whatsoever of being hit though I had heard the solid thud of the bullet striking. As fast as I could, I bolted in another round and hit him again in the same spot. Again no reaction for a second, then he turned and began to run, angling away from me. Twice more I shot, beginning to despair of ever downing the brute, and dimly beside me I could hear Bruce shooting again and again.

Suddenly my bull somersaulted and lay still and seconds later the other bull followed suit. We approached cautiously but both animals were dead.

Thus these two bulls were no more difficult or dangerous to shoot than the average deer or moose—but the next one was a different story indeed. The hunter was Roger Barlow, a freelance U.S. cameraman and gun writer. He was testing the new Winchester .338, fitted with a Bausch and Lomb variable power scope.

We rode nearly 20 miles that day—quite a tough chore for a deskbound worker—before we were able to get within range of two big old bulls in a small meadow. Other animals we had seen had taken fright and galloped away.

So there we were, at last, crouched behind bushes, cameras ready. Roger shot once, twice, three times—and the bullets could be heard slapping into the great 2000-pound hulk. Then both bulls turned and fled for the woods a couple of hundred yards away with Roger desperately firing at one until his rifle was empty.

We followed the animal by the heavy blood trail but in the dense bush you couldn't see more than 20 or 30 yards.

Suddenly, from an evergreen 20 yards away came a loud snort and the bull charged out. Roger fired, the bull turned and ran.

We found later that this .338 bullet had hit the buffalo in the nose, turning it.

Again we took up the blood trail, feeling more apprehensive by the minute, and wondering if this one could ever be killed or if one of us would be the victim of a short-range charge.

Roger was out of ammunition now so he took Bruce's .375. Suddenly the bull appeared from nowhere, right in front of us, and Roger hit it full in the centre of the chest from 20 yards. It should have stopped a Sherman tank—but the buffalo fled again.

Again a tense period of following the heavy blood trail. But the big bullets had taken their toll and we caught up to the bull. Believe it or not, that bull had to be shot again and again with the .375 to kill it—in all a total of 13 .338 and .375 shots were used on it. It stood more than six feet at the shoulder and weighed a ton.

So there you are—some buffalo are hard to bag, some are easy. But Ed Olsen, who knows more about them than anyone, says all bulls are very dangerous indeed. One-shot kills from a safe range are the best course and a .30-06 should be the minimum rifle used.

"A charging bull can smash down six-inch poplars," says Ed. "If you should be charged by one, you might be able to wait until he was close and dodge him—but if you were charged by several in a group you would certainly be killed."

The cost of a buffalo hunt? The outfitters charge $100 a day, minimum five days; license is $50 for Canadians, $200 for Americans; you pay your own way to Fort Smith.

I paid $50 to have my buffalo hide tanned only to find it's so big it covers the floor of my den and starts up the wall; I paid $20 to have a pair of horns mounted for a gun rack. I did not want the huge head.

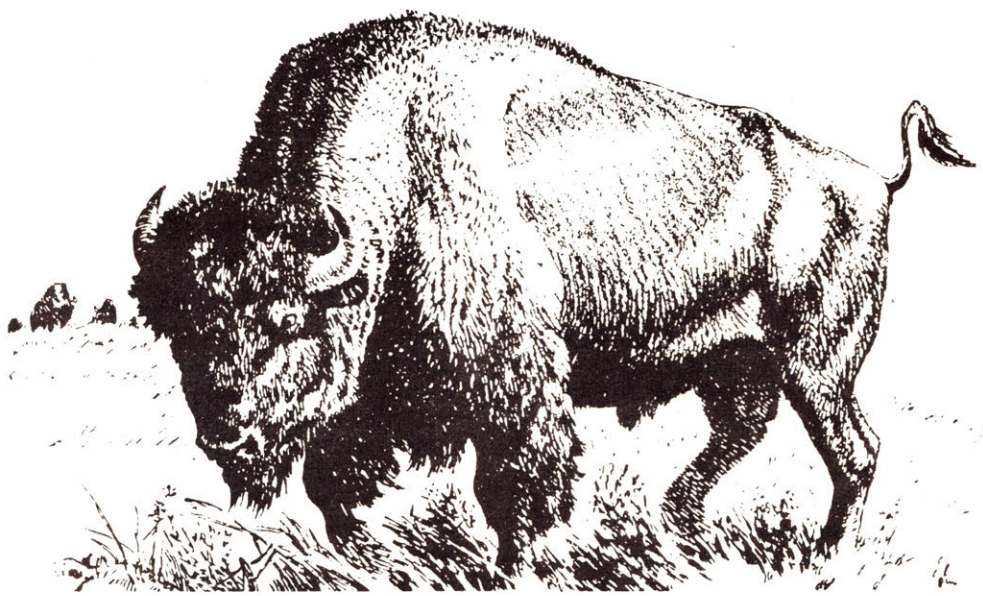
The meat of a young animal is delicious, marbled with fat like beef. But the only transport to Fort Smith is a plane from Edmonton, 500 miles to the south, so the cost of bringing out meat is fairly high. It cost me nearly $10 to get 25 pounds of choice steaks to Toronto, but they were worth it.

Added dividends of a buffalo hunt are the easy-to-bag ducks and grouse, sometimes geese too.

At one waterhole where we stopped to water our horses I wanted to flush a flock of ducks so that I could photograph them taking off. But I was frustrated because there was not a stone to be found to throw at them; we were far north of the Precambrian shield of Canada — north of the rock belt. Even the river bottom of the mighty Slave was silty mud.

During the hunt we lived in tents on the riverbank. There were three Indian guides for our party of four hunters, three cowboys to look after the string of 20 pack and saddle horses and one pretty cook. We reached this camp by bush plane and the only communication with the world for the next week was by battery-operated radio telephone. It took half an hour one night to get a four-word messange through to Fort Smith for relay to Edmonton, thence to Toronto—I wanted to let my office know that my assignment was completed.

The message read: "Buffalo in bag. Regards."



THE MEAT HUNTERS

Killing game and selling it was a traditional and legitimate way of earning a living during the early days of this country but severe and sometimes irreparable damage to our wild life resorted because the practice was permitted to continue long after there was any need for it.

Most of the early settlers hunted for themselves. As the settlements grew, a few men who liked life in the rough, made a business of hunting game and selling their kill to town dwellers. Some of them such as Daniel Boone became picturesque figures in early history, legend and literature. Without these buck-skinned clothed specialists and the game they hunted, the course of history might have been different. Certainly civilization's march across the continent would have been slower, for it was the professional hunter who, on many successive frontiers, supplied the meat for men of other occupations, who transformed a wilderness into a great Nation.

As long as these hunters killed game only to supply isolated settlements with fresh meat, their killing, heavy as it was—was justified. But conditions changed when the railroads caught up with the frontier. Beef and pork being easily obtainable (and preferable by the frontiersmen) game meat was no longer an essential food. The sale of game should have been stopped then. It was not stopped because no one realized that game is one of our renewable natural resources. Some men believed that the supply of animals and birds was inexhaustible Others thought that all game had to disappear when the country became completely settled. Both were wrong, so the slaughter continued. Frank Meyer, a famous buffalo hunter and a good business head, is purported to have made the following contract: "to furnish a wholesaler every week with at least three tons of big game, rough dressed". He was to be paid ten cents a pound for deer and other animals, twelve cents for sheep and fifteen cents for bear.

A freighter agreed for a fifty per cent, cut to send out a twelve-horse team once a week to fetch the kill to town.

Meyer, a combination cook-and-handyman set out for the high country of the Blue River in Colorado. His gun rack held three single-shot rifles; two Sharps and a Ballard. Meyer manufactured his own hollow-nosed bullets for use in these weapons.

On the first day out Meyer with a single shot broke the necks of two mule deer standing together. By the end of the first day he had 2,600 pounds for the days work (not an outstanding piece of work for the abundance of wild life and game in the area). Meyer was not a stingy man, particularly with his ammunition, but it is alleged that on the second week of the shoot he had amassed 2,500 pounds of meat and he used up only 20 cartridges.

Like Meyer, all professional hunters of the frontier killed mercilessly to meet the needs of the town they supplied with meat. Because lack of transportation restricted their hunting to areas close to those towns, the damage they did to big game was localized. They never bothered with game birds or water fowl except for their own campfire pots.

One record indicates that in the State of Michigan in the early 1880's market hunters bagged most of the 80,000 deer taken by hunters in that State in one Fall.

Sportsmen finally got the season in Michigan shortened from four months to one in 1887. Seven years later they persuaded the Legislature to pass a licence by-law and impose a season limit of five deer. But the law did little good. Market hunters took out licenses in the names of relatives and friends; they did not, it is true, kill quite so many deer in subsequent seasons, but they were better off because the restrictions had forced up the price of venison. Not until the season limit was reduced to one buck and the sale of venison made illegal could market hunting for deer be stopped.

Some hunters hired out to kill white-tails for the logging camps, but this could never mean a serious drain on the deer because lumberjacks were beef-eaters who roared their disapproval if venison appeared on the table too frequently.

One of the most shocking and completely documented crimes against our game was the extinction of the passenger pigeon. From earliest Colonial times until long after the Civil War, millions of these fast-flying birds migrated each year. In 1857 the Ohio Legislature tried replying to pleas for their protection stated, "the passenger pigeon needs no protection . . . no ordinary destruction can lessen them". The indictment of the hunter is that the last passenger pigeon died in a Cincinnatti zoo in 1914.

Although market hunters are rightly blamed for the extermination of this excellent game bird, the professional shot gun hunters played only a small part in it. The pigeons could be bagged easily by other methods, and the price they brought did not justify much expenditure of powder and shot.

The slaughter was instigated by market buyers and carried out by gangs of killers assisted by thousands of men and boys eager to cash in on a few days of bloody work.

An example of the wanton destruction of the now extinct passenger pigeon was that they were released from cages and shot by trap shooters. Millions were slaughtered this way before the "sport" was finally outlawed.

Doug Vaisey

KING WHYTE SAYS: "GUNNERS ARE GONE GEESE AT JAMES BAY"

Just about the greatest thrill that can come a shotgunner's way is to be hunched down in a willow blind on the mud flats of James Bay and see and listen to the tens of thousands of snow and blue geese darkening the sky. His Cree Indian guide begins to call and a flight turns and pitches towards the decoys. When they're within range the guide hollers, "Shoot! Shoot!" and the sportsman ups with his gun and blazes away. If he connects, and it is hard not to, the geese coming down seem like falling bombers.

In the Fall of each year the geese stop off on these mud flats to feed on the tender roots of the sedge grasses and fatten up for their long flight to Louisiana and Texas. Unlike the Canadas they decoy readily and it is rarely a problem, even in bluebird weather for a man to get his take of five geese in a short period of time. And no one can call geese like a Cree. From the time they are little tads they practice the art until they can almost call them down your gun barrel. I had one guide who called a flock back to the decoys three times in a row even though they were being shot at.

Moosonee, at the mouth of the Moose river a few miles south of the bay itself is pretty well the jumping off place for shooters. This village is reached by the Ontario Northland Railway from Cochrane or North Bay. One camp on the Harricanaw operates a fly-in service from Cochrane while Arctic Tourist Outfitters of South Porcupine flies up to Pontax on Hudson Bay. The railway operates ones of the original camps and the James Bay Goose Club runs a posh layout with all the comforts and amenities of a modern hotel. Rates, all found, run from about $250 to $300 for a five day shoot. This includes guides, plucking, dressing, freezing and packaging of the birds, accommodations, meals and transportation from the jump-off spot.

Some hardy characters prefer to hire a guide at Moosonee and tent out but this is doing it the hard way. Personally, I prefer to ride in a bombardier to the shooting grounds rather than slug it out for a mile or so over the mud flats.

Guides are a must in this country as one can get stranded miles out on the flats by the tide. A night spent out there waiting for enough water to float a canoe is a mighty uncomfortable experience. The tide must be caught at the right time in canoeing to the bay from Moosonee and return and only the local boys know when to start up the motor. Canoes, incidentally, are usually the big Rupert House freighters and are both safe and comfortable.

As for equipment you'll want the warmest clothing you can buy, hip boots, shooting mitts, and windproof rain gear. It's a good idea to take along something lighter for lounging around the camp.

I'm partial to my Winchester Model 21, a double barrel job which unfortunately is now obtainable only on special order. I take a variety of shells with me—4's for the blues and snows — trap loads for snipe — a few rounds of 2's carried in a separate pocket in case some Canadas should come over—and a couple of boxes of 5's for duck.

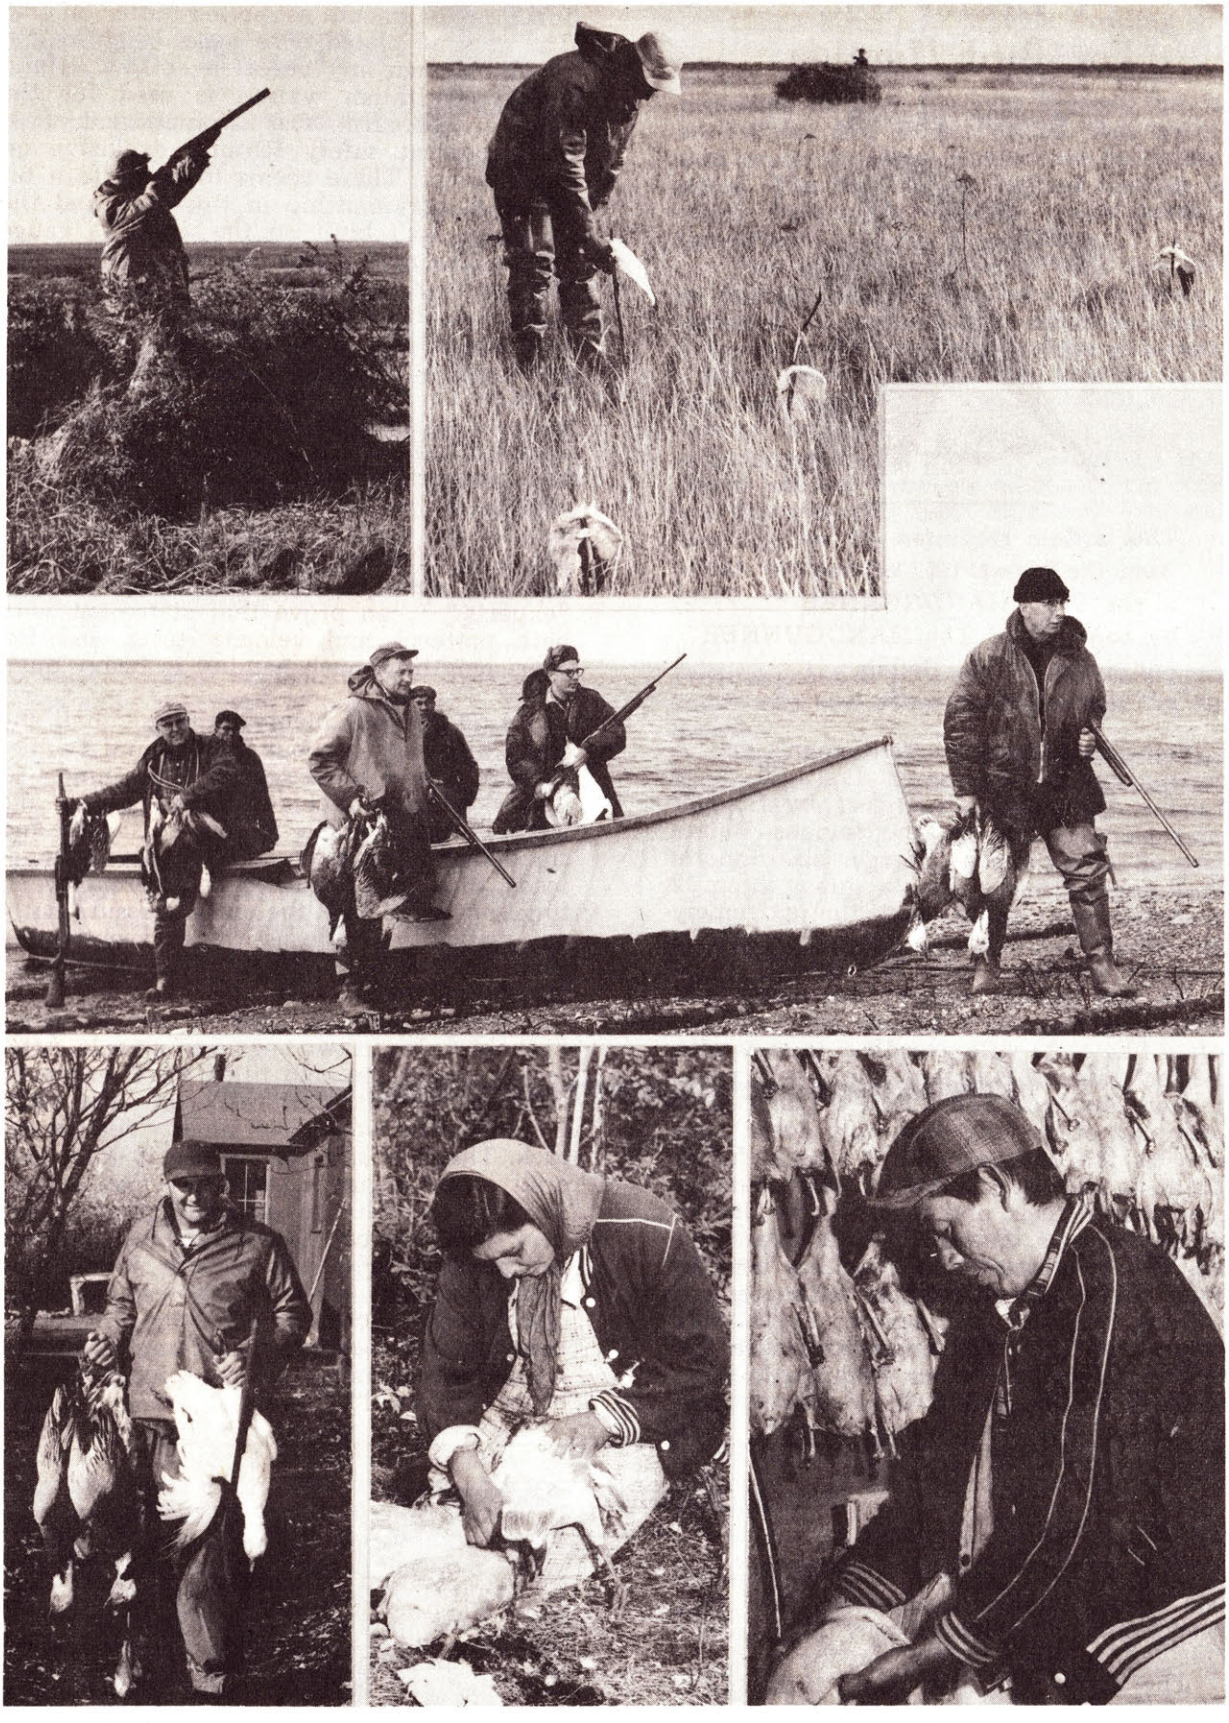
Blue geese and snow geese are the same goose according to the biologists—just colour mutations.

There you have it gentlemen. The shooting trip of a lifetime. But, make your reservations early.

I'll see you next Fall up in that lonely bleak country where you sometimes have a bit of a problem getting to sleep at night because of the cackling of the geese going overhead.

CBC PHOTOGRAPH by Henry Fox

King Whyte, familiar to TV viewers across the Dominion for his CBC show, is very likely Canada's best known hunter and sportsman.



GEESE AT JAMES BAY ——————— Photo—Ont. Dept. Travel & Publicity

A Dream Gun For Bird Hunting

By KENT BELLAH

This article reprinted from the March 1957 edition of the U. S. HANDGUNNER by courtesy of The HANDGUNNER and author, Kent Bellah.

Gentlemen, I have a gentleman's gun. A sporting gun for sportsmen. It's a 20 gauge Franchi Automatic, an import by Stoeger Arms Corp., made by the famous Italian firms of Luigi Franchi. Stoeger also imports the luxury Franchi double guns, their 12 gauge Magnum Auto, and the extremely light standard 12 gauge Auto. But this is about the excellent little 20 bore.

Its the lightest weight automatic gun made, weighing only 5 pounds and 2 ounces, to feel like a .22 rifle. Needless to say, with a perfect balance, it swings fast to gain yards on quail, and you don't need a gun bearer at the end of the day. It simply doesn't get heavy as the day gets old. It's beautiful to look at, it feels better than it looks, handles better than it feels, and shoots better than it handles! It gets on target faster than any shotgun I ever fired. The trend has been to lighter guns, and this is the ultimate, yet recoil is certainly not severe, even with heavy loads. The weight compares with the finest lightweight custom English doubles, and the third shot adds 50% more fire-power

The action is the Browning type and functions as smooth as melted butter on silk. The chrome plated bore looks brighter and smoother than any bore I ever saw. Hand checkered Italian walnut is used for the stock and forearm. The automatic cut off is an important safety feature, exclusive on the Franchi. There seems to be quite a bit of hand workmanship in this gun, and the 20 gauge isn't built on the usual 12 gauge frame. The neat frame and small tube, plus the receiver design, give it a "continental" look, like the fine custom guns. The price isn't competitive with inexpensive American guns, but it wasn't designed especially for farmers to shoot skunks in the henhouse either. The standard model with plain round barrel is $157.50. I got a hollow rib barrel in standard grade, that sells for $169.50, then added a Poly Choke and recoil pad. My barrel has an overall length of 22", which is about as efficient ballistically as a longer tube, in spite of the recommendations of "experts." I can prove that statement with both patterns and velocity tests, and the short length is much handier in heavy quail cover.

A 20 gauge is plenty large for quail and small bird shooting, but the 6 pound 4 ounce 12 bore would be better for all around use, where hunting includes ducks, crows and larger birds. My little 20 seemed so tiny and small that I test fired it with heavier handloads than are available commercially. It functioned and took the extra pressure without difficulty. Patterns were exceptionally good, both before and after installation of the Poly Choke.

Stoeger supplies both 12 and 20 gauge Franchi Autos in two engraved models. After seeing one of the gold filled scroll engraved Eldorado models, that retail for only $283., I thought one would look mighty fine on my rack. That's in spite of the fact I don't generally want a gun for anything except good shooting, which the standard model does very well indeed. Everyone who has seen my gun is carried away with it, and amazed with the light weight and fast handling qualities. If I get flush someday, I'll put an Eldorado in the rack, just because its pretty! It will also powder a clay pigeon or bag birds, or I wouldn't want it.

THE NUT BEHIND THE WHEEL!

One of the "seasons" that is frowned upon by all wildlife authorities, provincial departments of highways and the majority of drivers is "open season" on the road.

The highway toll of game is fantastic! Slaughter of animals that cross the public highway! This is no hunter's sport— this is the running down of game by four-wheel vehicles — with a heinous driver steering the wheel.

A collection of accounts of these incidents when game has been run down on the highway would show that over the years the toll has been terrific. All of this needless slaughter and injury to wild life could be avoided if motorists would drive with caution in these areas where they know they are likely to encounter wandering wild life and particularly noctural animals.

GRIZZLY

Cantankerous, unpredictable, great, "Ursus Horribilis"—these are all words that describe the grizzly bear of the West. For an animal with no science sense, his name gives him a title that attaches the appropriate name for this great creature of the wilds and the woods.

But do not confuse him with the Eastern black bear, a playful animal at times, a bit of a cowardly fellow. It has often been said that if an Indian got close enough to slugging an Eastern black bear on the head he usually tapped him on the shoulder to make his apologies before the club connected.

The grizzly—now here is an entirely different story. The bear that marched off his own limits without having to post signs: "Keep Out—Grizzly Here". The bear whom the Indians hunted with all the caution and respect they could muster. To the Indian the grizzly was a mighty animal—to take him was a great prize—to take him and live was an achievement.

Early western pioneers—the people who pushed the face of the West back rated the grizzly as the most courageous of the denizens of the wilds—a tough opponent, who would fight to the last ounce of energy in order to live.

Today—where is the grizzly? The truth is you have to travel great distances to find him—but wherever he is found "Ursus Horribilis" is a foe who has a bag full of tricks —an unpredictable temperament — a cantankerous character. From the time of the early West until the space age the grizzly bear hasn't changed one iota in his habits. But he has become a smarter bear — he knows more of the ways of men, he is wary of human beings who come into his domain and he will fight to the limit anyone who challenges or pushes him further than he wants to go.

Here is savagery bundled up in a bear skin.

Experience shows that it is not safe to test the proposition: will a grizzly bear attack a man without provocation? Who wants to take the risk of finding out at the feet of a grizzly that he was "provoked"? From the early West comes this quotation on the subject of reasoning with grizzlies: "After all, it is the bear that decides what provocation is; sometimes you just have to be in the same county with him to get him riled". How true!

There are men who have stood up to a grizzly and they died an agonizing death; those who escaped with their life bear the scars of struggle with the grizzly; mauled, seriously injured.

The grizzly has two qualities that make him the most feared of the bear family. Ability to deal death blows and the desire to kill. Man can be mauled to death, torn to ribbons, ripped with claws, slashed with fangs; he is no match for the grizzly with ability and desire.

Out in the Rockies we now find the grizzly that once dominated the West: in the mountains of Western Canada and Alaska he is the king of the range.

In the days of the early history of hunting on this hemisphere the grizzly had the upper hand. He had all the advantage—and he knew it. But today he has lost all of his assets of advantage and against the high-powered rifle and explosive ammunition his odds have dwindled. Where he could rely on speed to escape he is caught by the great power of guns. Today the hunter can fire as many as three shots while the first one echoes and rings around the range.

The grizzly has a great capacity to absorb lead and still rally to the offence. He is a huge animal with great reserves of strength and courage. He does not lay down his life for nothing. It is when the grizzly is in this do-or-die state that anything can happen—a mis-cue and he wins—a moment of confusion and he capitalizes—a moment of panic and he becomes the pursuer.

One early story of a grizzly hunt tells of eight men who each shot the same grizzly. They expected the bear to drop in its tracks and were surprised and alarmed to be running for their lives when the bear with eight shots in his body gave chase with great vigour and tenacity. Almost on top of two of the men the bear was finally killed by a single shot in the brain.

Over a hundred years ago the grizzly roamed with great freedom—they were observed on trail rides, fifteen or twenty in a single day.

Continued Over Page

Through propagation and their natural abilities to get into trouble the grizzly became a menace to the advancement of communities and to the opening up of the West. They (the grizzlies) had it pretty much their own way since the middle 1800's, the quality and calibre of guns was not sufficient to deal death-dealing blows to the bears. With the weapons of that time the hunter had to move in on the bear and score a head or heart shot; a strike in any other place turned the grizzly into a rampaging tank of terror capable of moving at great speed and full of determination to eradicate the hunter.

Modern day cartoonists make much out of depicting the hunter up a tree with a sort of Yogi Bear standing on hind legs reaching up for the terrorized treed man. This was not quite so funny in real life. There are many men who owe their life to the fact they could crawl out on the limb of a tree to get a good second shot at a bear. They knew full well that a wounded bear is a crafty conniving creature and that unless they made the second shot good — it might be their last chance. The grizzly cannot climb but standing on his hind legs he can stretch out a long reach! (The Eastern black bear is not aloof to the idea of tree-climbing, but the grizzly likes two feet and preferably four on the ground).

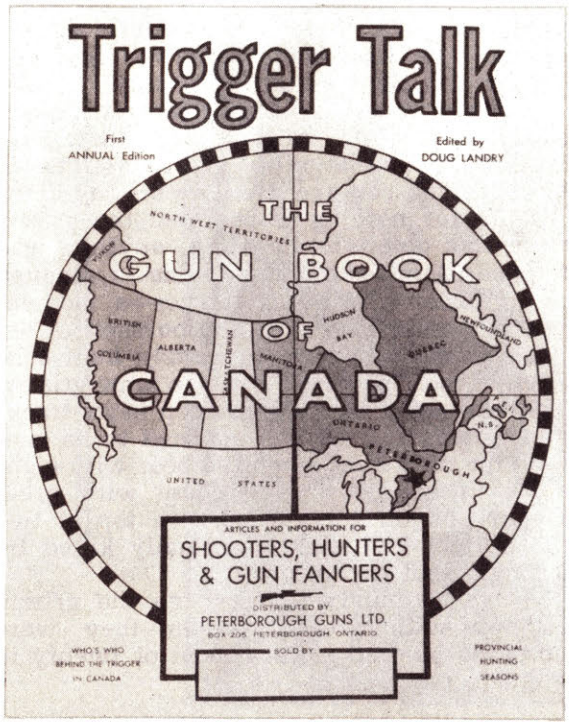
Eighty forms of grizzly (and the Alaska Brown Bear) have been identified by naturalists.

The coat of most grizzlies was dark brown, deepening to black along the spine and on the legs and ears with a white patch behind each shoulder. The fur was tipped with white, which gave the bear his nickname "Silver Tip".

As a creature of destruction the grizzly bear has no peer. In California it was reported that "the hunters kill large numbers of bears and the bears kill a considerable number of hunters". In search of the grizzly early Westerners hunted them with dogs; cornering the bear, the guns of the party destroyed the grizzly. From the low ranges the bears were forced to withdraw to the upper mountain reaches — but even then they continued to make fast stories in raiding on the lower levels. As many as 1,000 sheep were destroyed by a single grizzly over a history of ranch raiding covering fifteen years. This grizzly was sought, pursued, run by dogs, and yet was only seen by human eyes two or three times.

Today—"Ursus Horribilis" is a trophy that many sportsmen covet for their gun rooms—club trophy cabinets—he is sought as a prize and not the object of slaughter. The grizzly bear is becoming scarce—and it takes a real sportsman and a crack shot to chalk up — one grizzly dead!

"WHATS IN A NAME?"



Canada has been in need of a gun book since Adam Dollard stood on the site of Long Saulte with his musket pouring shot at the Iroquois. Almost three hundred years later Canada produced its first gun book—The Gun Book of Canada!

The name "TRIGGER TALK" is an all-embracing term covering topics of interest to all hunters and shooters. It was originally suggested during a discussion between Dave Wilson, president of Peterborough Guns, and his firm's solicitor. P. G.'s lawyer is a former Peterborough boy, Garry Braund, B.A., LL.B., who now has his office in Toronto. We feel that Mr. Braund's suggestion could not be more appropriate.

It is our hope that the first annual edition of "Trigger Talk" will fill a needed role as a gun book for experts, by experts—providing articles and information—fact and fiction for Canadian hunters and marksmen. "Trigger Talk"—a book that will be of interest to the expanding ranks of sportsmen across the face of Canada.

MOOSE HUNTING

Ellwood Epps

One of the finest forms of hunting, is done late in the season—the time that we will try and describe. By late season, we mean from mid-November on. True, it is a little cooler, but that leads to nicer hunting conditions, no flies or bugs, the leaves are off the trees, the days are clear and frosty which helps put a spring in your step, and clears the cobwebs out of your head. If you have never enjoyed the late hunt you have missed the finest experience of your life. In the north when it is cold, it is also clear and quiet — too quiet to sneak up on a single moose, but on two or more, they make noises too—but I will tell you more about this later on.

Equipment:—The following are **musts** and do not skimp—get good ones. A metal waterproof match box with matches that you must never use except in emergency, carry a lighter for other times. A good sturdy compass, a pin-on is handy if well made. A map of the area, this can save lots of walking and sometimes prevent spending a night in the bush. A good hunting knife with about a 5" blade—do not carry on your belt at your side or your front, as you see tenderfeet do, you can fall and receive sometimes a fatal cut. Carry the knife on your belt at the centre of your back, in this position it is almost impossible to fall on. A short length of string—deer hunters will know what this carry is for. A tea pail and a cup, and I also like to carry a hatchet with about 1½ pound head. This is handy in many ways, to quickly take down a tree to bridge a creek that you cannot get over, also to chop ice in a river or lake for water for the tea pail. I always carry all of this in a small rucksack along with a flashlight, a towel and of course the food for lunch in the bush, because this is all part of the hunt.

Clothing:—Fine wool underwear, this past year my wife Isabel and I tried out this highly advertised Thermo underwear and in spite of all claims, it certainly was not nearly as warm or comfortable as the good fine wool. A pair of red checked wool hunting pants, a good heavy wool shirt, a wool jacket or extra heavy wool shirt, and a good reversible red hat. Nothing but wool for the outside clothing is quiet enough for still hunting. Boots or Shoes:—For fresh soft snow, nothing but rubber boots will keep your feet dry something along the lines of the old Jack Rabbit boot, and for the real cold dry snow a good pair of rubber bottoms and leather tops are good, and should also have a soft sure gripping sole, and large enough to wear at least 2 pair of socks. I like one pair of fine wool and one pair of heavy wool, and good insoles. Insulated boots are fine, but heavier to walk in. If deep snow, snow shoes are required, and a pair large enough to do the job.

Suitable Gun:—We have found a well placed bullet—**but it must be perfectly placed**—will kill a moose quite easily, but if not in the proper position, then it is a different story, so our recommendation is a good accurate bolt action rifle in a caliber from 7Mm on up and that I would say is about the minimum. A bullet should weigh at least 150 grains, round nose for good brush bucking, and preferably at 2500 F.P.S. or more. Main reasons for choosing a bolt action is that it is more accurate, more dependable and not so liable to freeze in cold weather, easier to carry and usually quieter to handle and always faster for the first and all important shot—so take a rifle that will do the job. A moose is too fine a game animal to use an inadequate gun. If you are going to kill one, kill it clean and quick.

Getting the shot:—Moose, contrary to what some writers claim, at least in the latter part of the season, are a lot smarter than deer. They have a nose that can scent you a quarter of a mile away, and those big ears can hear a match break at 100 yards, so go easy and work up wind, but once you hear them—if more than one—close in fast, they seem to be confused on a fast approach, if you are close when you start.

This year's hunt four of us were out hunting, Isabel and I went one way, the other two went another way; we saw nothing, but the others jumped five moose, they started to run, and so did the boys, and one old hunter jumped on a dead tree—made a crash on purpose, and the moose ran to clear timber, and stopped thinking another moose was coming, they got shooting, getting three before they ran out of shells, and while dressing out one of them a bull and a cow came back and was looking at them. Moose tend usually to drift down wind when feeding, so if you cut sign today and you have a South wind, look for them from ½ to 4 miles farther north the next day, and again never try to track a moose down wind, just keep working them from the side. Try and learn the area because they are something like deer they have their favourite trails and feeding grounds, but they may be many miles apart. Once you spot a moose, the battle is almost over—or it seems like it; they look big—they are big—but oh so easy to miss!

One time Isabel and I came up on a moose, just at dusk, I leaned sideways so Isabel could shoot past, we were within 75 feet of a nice 4 or 5 year old bull. When she shot it did not look right to me, so I followed up and away the moose went. On checking

Continued Over Page

further, a combination of three things happened—it was almost dark, and a moose is black, and in front of the moose there was one, and only one Black Birch tree 2½" in diameter and believe it or not—we both hit the same tree. The tree being the same colour as the moose, we could not see it. Result—our hunting pals cut the piece of the tree out for us as a momento. When we went back the next day to get what we were positive would be a dead moose, but instead it was a dead birch. Another lesson learned was—these highly advertised, special tipped, pointed etc., bullets are no good in the bush, use a heavy round nosed soft point bullet only.

This article would not be complete without a note about the ladies. Isabel has hunted with me for about nine years and during this time she has shot five deer and this years' score makes five moose, but you will be more interested in the problems of the females hunting. Where we hunt the little lady must be able to walk—not fast but able to keep going all day from 8 a.m. until dark, 4.30 p.m., with about ¾ of an hour off for a real lunch in the bush. The clothing about the same as described previously for men, it seems impossible to obtain good wool lady's hunting pants, so Isabel uses men's, and finds them comfortable and warm. Another item I forgot to mention is a good wide pair of braces, nothing tires your back like trying to hold your pants up with a tight belt. Same footwear—socks—and underwear—Isabel likes the quilted insulated top underwear and sweater, these can be taken off and carried in the pack sack if you get too warm. She also carries a large John E. Handwarmer, on cold days, pin on compass, large handkerchielf for the neck, lots of kleenex for running noses, which they do at 10 below.

Rifle—Here again it should not weigh over 6½ pounds with a proper fitting stock, and a carrying sling, and this almost requires a custom stock, and then for a cartridge, not too heavy in recoil, but still powerful enough to kill cleanly. One of the best we have found answering these requirements is the popular 7 x 57 with 160 or 175 grain bullet, our own 6.5 with a 140 or 160 grain bullet in larger calibers, you should use hand loads reduced to cut down the recoil to a suitable level, if they cannot stand the recoil, they cannot place the shots.

Other useful items:—A good pair of compact Binoculars—I use a small pocket set 7 x 25 the only small ones I ever used that were good, I tried over 15 pair before I found these good ones. They sure save lots of walking and allow you to make sure of your game. **Scopes**—yes and no—they are one of the finest sighting and safety devices ever put on a rifle, but like lots of other items they also have their disadvantages. **On the Good Side:**—There is no record of any hunters being shot by a hunter using a scope sighted rifle, and give more positive sighting especially in unfavourable light conditions, like the time Isabel and I shot the tree—with our scopes on that would never have happened.

The Bad Side:—They are useless on days when a bit of snow is falling or is on the trees, or in a misty rain, so by all means have a scope, but one that you can put on in detachable mounts, so you can use your other sights when the scope is off. I would not have had my moose this Fall if I had not had a scoped rifle—I shot it at 465 measured yards—one of those "Once in a Lifetime" deals. The cartridge was a 30 Newton, with 180 grain Epps pointed bullet at 3100 F.P.S. loaded just for open long range shooting. All of this boils down to the fact that if you can get back in the bush and out again hunt up wind carefully on the ridges on bright clear days and on the draws on the days the barometer is falling allow yourself enough time, do not underestimate the moose, and you should be successful.

One more little note. Regarding a Fire:—A lot of people cannot build a fire in the bush. I have never yet been in a bush that you could not get lots of wood for a good fire, any standing dead tree, if not rotten, and few of them are, especially good are any of the evergreen class—like spruce or pine makes excellent wood. To start the fire any of the dead branches on the bottom of a spruce will start almost like oil soaked rags. Birch bark can be lit even in a heavy rain, and when soaking wet, so gather a little of the above and have some dead limbs handy, start the needles or the bark and add small twiggs, then the branches, and you will have a fire before you know it. Everyone who goes into a bush should know how to build a fire, many lives would be saved by this simple bit of training. If you never have hunted, and the above does not give you all the information wished, we have a very extensive check list that we use, so if you are interested we will be pleased to help.

BUCK THE MOOSE

All of the problems of railway companies do not have to deal with the questions of economics or transportation of live stock or their passenger services or the maintenance of their rolling stock. In Alaska one of the problems for the railway is — the Moose.

Reliable sources have it that moose will oftimes plant themselves on the railway tracks and even charge oncoming locomotives. Methods designed to educate the moose against the danger of their bent on running down tracks and bulling their way into engines have been the use of huge ocillating lights mounted on the engine, various types of pistols, and the setting off of firecrackers. "Parking lots" for moose have actually been bull-dozed out at strategic points along the railway lines.

None of these ideas has completely stopped the moose. If this story is a little too hard to digest and sounds like one of Baron Munchausen's tall tales you can obtain pictures and news reel photographs of the moose actually roaring down the track propelling head-on for a tangle with a train.

It is not likely a matter of record but it is safe to assume that the railway company have not yet lost a buck on the rails with a moose.

WHO'S WHO
BEHIND THE TRIGGER

CGAM PHOTO

G. S. Boa F. McCormick **W. R. Jones** **E. V. Gering**

E. L. Warner **G. W. McMahon** **G. J. Henderson** **G. Brunner**

The 1960 Olympic games were held in the historic city of Rome. Canada was represented by seven shooters, who were accompanied by team manager, F. McCormick of Beaurepaire, Que. Entry in each event was restricted to two competitors per country, allocated as follows:

W. R. Jones, Vancouver, B.C. — Clay Pigeon.

G. J. Henderson, Long Branch, Ont. — Clay Pigeon.

E. L. Warner, Lennoxville, Que.—Small bore Rifle Prone and Free rifle.

G. S. Boa, Islington, Ont.—Small bore Rifle Prone and 3 position.

E. V. Gering, Toronto, Ont.—Small bore Rifle 3 position and Free rifle.

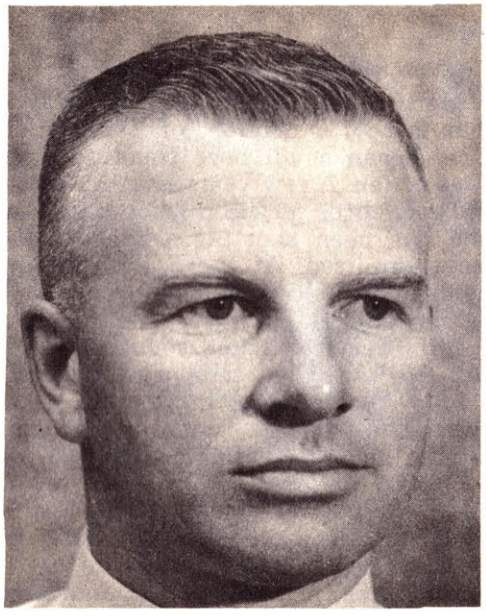
G. W. McMahon, Dartmouth, N.S.—Free pistol and Rapid fire pistol.

G. Brunner, Hanover, Ont.—Free pistol and Rapid fire pistol.

There was a total of 18 sports events held in Rome. Track and field came first in popularity with a total of 77 nations participating. Shooting came second with 61 countries entered. However, in actual number of competitors, the shooting events far outranked others.

In practice sessions, in some elimination series, and even in some final competition, Canadian shooters demonstrated that they rank with the world's best.

The Olympiad did not close in a blaze of glory for the Canadian team, however, we can be proud of the sportsmanlike way they represented our country.



ZAVITZ

"Maintiens le Droit" is the phrase that the R.C.M.P. bears on its coat-of-arms—maintain the right.

Sergeant J. R. Zavitz of the RCMP, Vancouver, British Columbia, has been efficient at maintaining another phrase—a straight shooter. He has a record of performance extending from 1951 to 1959 to prove it. A crack shot with a pistol, Sergeant Zavitz, at one time in his Mounted Police career couldn't score a hit with ten rounds at 20 yards. But practice made perfection and there is now a string of championships knocked off by this Ottawa-born marksman. He has represented Canada at the Olympics, the Pan American Games (Chicago) and World Championships at Venezul, Venezuela and Moscow.

In 1957 G. W. McMahon began pistol shooting at Halifax. Now after three years —two in tough competition, he is recognized peer in the free pistol and centre fire classes of pistol shooting.

Winner of the Canadian Open Pistol Championship in 1958, he was a member of the Maleigh Cup Team in 1958, 1959 and 1960 (and his team won the Cup in 1959) He attended the Pan-American Games in 1959 and won the Bronze Medal in the Centre Fire event. The four-man Canadian team won the Bronze Medal in the Free Pistol event. Mr. McMahon was a member of the 1960 Canadian Olympic Team in Rome and was well up on the scoreboard in the Free Pistol Event.

McMAHON

Godfrey Brunner was born in Austria 40 years ago. He has resided in Canada at Hanover, Ont., since 1949, and is keenly interested in the sport of shooting. He placed first on the Mayley cup team in 1958. At the Pan American Games at Chicago in 1959, he was a team member representing Canada, he placed 6th in the Free Pistol Event. For the 1960 Olympics held in Rome, he was selected to represent Canada in the 2 man Free Pistol Event, placing 30th in this event.

Brunner

Tiilen

Edgar Tiilen is 37 and married. Born in Estonia where his keen interest of marksmanship was first inspired by the high standing of national marksmen and champions.

Settling in Canada in 1948, he has been actively engaged in his field of sport since 1951. Within the past 9 years he has established a very impressive record as a marksman.

Having competed both in Canada and U.S.A., he won the 1959 Ontario Indoor Championship for all three positions. His standing of 1126 points in the International Smallbore Target was recorded in the 50 meter meet, which took place in Lakewood, N.J. He has also competed within the various Correspondence Meets, where he has placed 1st in numerous occasions—both in prone and standing positions. In 1959 he was a member of the team which represented Canada in the Pan-American Games. Placing 5th in the individual standing, he holds a gold and 4 bronze medals for the team competition.

Presently, Edgar Tiilen is the 1960 prone position Indoor Champion of Ontario with an excellent result of 800x800.

E. Gering was born in Estonia, May 24, 1918 but is now a resident of Toronto, Ontario. He began small bore shooting at the early age of ten. A few years later he formed the 300 m, three position shooting. Since then he has been shooting whenever time or place permitted. At the World Shooting Championships held at Stockholm in 1947, Gering participated in three position small bore and Service rifle souvenir badge matches. He was then temporarily residing in Sweden. Since living in Canada he has an impressive record, winning Canadian match rifle gallery Championships 1957 and 1958. He has also been a member of the National Indoor League Three-Position Championship Team in 1955, 1956, 1957, 1959 and 1960. In 1959 he participated in the Pan American Games and won a gold and bronze medal in the 4 man rifle squad. At the 1960 Olympics in Rome, he represented Canada in smallbore and bigbore free shooting.

Gering

HARTMAN

If there were among the dictionary words a single expression to describe Canada's crack skeet shot Squadron Leader Barney C. Hartman of the Royal Canadian Air Force, Ottawa, it would be "marksmen extra-ordinary" or "perfectionist". Hartman, a Westerner, from Tisdale, Saskatchewan found prime targets in partridge, prairie chickens and ducks in his early experiences in shooting. This was the beginning of an interest in marksmanship that took Hartman from the game bird areas of Saskatchewan to the firing line in Provincial, Canadian and World Championship competition. He is now recognized as a peer in skeet shooting; the man with a record of achievement in all-round competition in the skeet shooting world that will not likely be bettered in this decade.

How did Squadron Leader Hartman rise to the peak of marksmanship? He was not a natural born crack shot. It took years of practice, study, knowledge of gun workmanship and the compiling of records.

Analysis of score sheets — round by round—is one of the secrets of Hartman's success. He did not become the best in the business by reading a do-it-yourself text on skeet shooting; he did not become the protege of a contemporary crack shot. No — it took hard work. Barney Hartman is a self-taught skeet shooter.

Hartman now approaches the art of skeet shooting with the same attention and research as the physicist in probing the atom. What happens to each shot is of concern. The factors, elements, conditions are all examined in a complete analysis of the shot. Too high, too low, too early, too late—whatever the probabilities for perfection are—this—Hartman is concerned with. Score cards maintained by Hartman point out errors and the corrective action required to make the shot do what he knows his skill and the weapon are capable of producing.

Hartman is no fair weather marksman. It is a year round hobby with him, cold, stormy, windy, hot, humid days will find Hartman down at the skeet range or in his Manor Park home at Ottawa continuing the study or the practice that will keep him on top of the roster of competitive skeet shooters.

Standing six feet in his socks, **Hartman** weighs about 180 pounds, does not smoke or drink and puts tremendous physical effort, concentration and study into reaching the position of precision and accuracy that makes him Canada's greatest in the gun game.

It was at the RCAF base at Goose Bay, Labrador, where he seriously took up the business of marksmanship. Hartman and others built a skeet range near the air base. It was on this range where Hartman began the business of shooting, analyzing, correcting, studying and recording his performance.

To read accounts of the experiences of Barney Hartman is to learn of a man who is totally dedicated to the perfection of his skill with guns. Every factor having to do with the firing of a charge of shot is vital—from the composition of the charge to the barrel design—from the choke measurement to the shot pattern on the target or clay pigeon.

Most men change their shoes for slippers after a hard day of work. Hartman changes his "shooting shoes" to match the weather and the soil on which he stands to shoot. Hartman guarantees that with the right shoes when he stands to shoot his feet do not shift — for with an infinitesmal degree of shift and the shot is spoiled.

"Tailored to shoot" is the best description of Hartman's gun garb, a good fitting jacket looks right on any man—but to Hartman the fit is vital. It avoids any interference with the smooth, controlled actior of movement required by top marksmen. A right-handed shot, Hartman has his right sleeve made slightly shorter than the left. To the unskilled eye you could not tell the sleeve length difference—but to Hartman this is another method of avoiding one of the traps of marksmen — sleeve interference —the catch of a sleeve that throws the shot off target.

Hartman's advice to the fair weather marksman is evidence by his own practice —match the weather with the right cap. He has a dozen different caps. A look at the weather forecast tells him which one to use on a particular day; he has caps for warm, sunny, cold, dry and cloudy days.

Soft, thin pliable leather is the substance of Hartman's gloves. With the exception of warm weather Barney Hartman has this leather type of glove. His "wet or warm weather glove" is specially made to prevent any unnecessary movement from perspiration.

Under his marksman's cap Hartman wears any one of three pairs of optically ground shooting glasses. Here the choice depends on the quality of light and the nature of the elements.

Test - test - test is one of the secrets of Hartman's success as a marksman. To do this he uses rolls of wrapping paper on which he checks the patterns made by his guns. This is hard, exacting work—to produce the perfect pattern.

Many things happen in the development of a marksman, many things require to be understood. Hartman is interested in what happens to the charge after it leaves the gun barrel. The substance of the shot—what it takes to make it consistent—all of these matters are mighty important to Barney Hartman. It is one of the points that makes him a great marksman.

Hartman brings to gun knowledge, experience and ability what the modern day physicist brings to UNIVAC or the scientist

Continued Over Page

to the electronic computer—he attempts to make a science out of shooting. He endeavours to understand, relate and execute every single factor that stands between Hartman and the perfect score. A study of the sport that enables him to have an understanding of trajectory, velocity, flight speed, shot content, patterns and other integral parts of developing the skills of a crack shot.

Hartman's advice to skeet shooters is "when you are shooting at a target released from the low house you must not only lead enough but lead high enough to crack that rising target." And Hartman has almost a decade of records to prove it!

Hartman is a marksman who works at his art on a year-round basis. He takes the warm days with the cold; the gusty with the calm, on the general principle that some day he will be in competition on a day when the weather is against him—and he will be ready, his practice will stand him in good stead at the range.

A slogan pertinent to Hartman's zeal as a marksman might well be: "What I did well before I can do better". Perfection!

Few people driving by his Manor Park home in Ottawa would believe that in the home of Hartman there is a detailed record of the progress he has made over the years in range competition and practice; that he has a library of gun texts available for study —that a fine gun workshop is located in the basement and that here is recorded in trophy and target—literally shot by shot—the Hartman history in marksmanship.

Hartman holds world records to evidence his excellence in the craft of marksmanship and guns

As to the future, Barney Hartman, states in frank terms, "to stay near or at the top in the years ahead will require a great deal of self-sacrifice". And Barney Hartman is the man who has the dedication to make that kind of self-sacrifice.

GILMOUR S. BOA

A dad and a lad is the story of the early training of G. S. Boa, and the record of achievement in military rifle matches and small bore (.22) rifle matches is a tribute to the instruction received and the hard discipline of study and practice.

Competing as a member of the 48th Highlanders of Canada rifle team, Mr. Boa scored many successes as a marksman. Major individual prizes won by Mr. Boa were:
1951 King's Prize—Bisley, England,
1955 Governor-General's Prize—Ottawa,
1948 Lieutenant Governor's Medal (Ontario)
1950 Lieutenant Governor's Medal (Quebec)

In small-bore competition Mr. Boa won the Canadian Open Championship five times, the Canadian Closed Championship nine times and was British Champion in 1949.

As an International competitor he was a member of the Canadian Olympic teams in 1952, 1956 and 1960, winning a bronze medal at Melbourne, Australia and a fourth place at Helsinki. He won the World Championship (English Match) at Caracas in 1954 as a member of the Canadian team and also was on the team at Moscow in 1958.

BARNEY HARTMAN

HOW YOU AND YOUR FRIENDS CAN START A GUN CLUB . . .

EDWARD A (TED) TWISS

Ted Twiss is in the Sporting Goods business in Barrie, Ontario representing the third generation of the Twiss family to operate a shop known as "Canada's Gun House".

Two very successful clubs have been organized in the Barrie, Ontario area and it gave me a great deal of pleasure and satisfaction in being able to take part in the organization of these clubs.

More interest is evident each year in gun clubs development through Canada, and for what it may be worth I have set down a few ideas and suggestions that may be helpful to those interested in formation of a club.

The Barrie Gun Club Incorporated was formed in July of 1946. From a small beginning it grew till we have a very active up to date club in all respects. Most of the credit for the formation of the club is due to the efforts of the late Major Jack Stiver. After his war work was finished at nearby Camp Borden he came to Barrie as Managing Director of the Barrie Chamber of Commerce. Having been a member of the Bisley Team he was an ardent shooter and his enthusiasm sparked sufficient interest among local shooters that it wasn't long before our club was formed.

How much will it cost to start a Gun Club?

In 1946 we were very fortunate in being able to rent 1½ acres of land for $200.00. The location was about 5 miles from Barrie. Our stay there was very short as we found that we were too close to other people who objected to the sound of 12 gauge shotguns.

We looked for other suitable land and were able to purchase 52 acres of land from the C.N.R. This was done the second year of our operation and we are still there. Our skeet and trap fields, low and high houses and traps cost us $400. I don't think that this could be done as reasonably to-day unless you have a lot of enthusiastic members who are willing to get out and do a lot of the work themselves. We started off at that time without a Club House but eventually we did build one which cost us approximately $150. By careful management of our club budget we gradually built up our club facilities so that to-day we have an up to date club house with stewards quarters attached, 2 sheet fields, a trap field and rifle and pistol range. Our last valuation on our club and equipment was $5200 so you see that by proper management and planning even from such a small start as ours what can be accomplished.

Thousands of clay targets are thrown at clubs that operate from farm lots using the tail gate of a pick up truck as the squadding desk and cashier. The shooting fun is the same as enjoyed at elaborate clubs but the club limiting its operation is curtailing its growth and in some way limits the sporting pleasure to members and their families

I know of a club that has developed into a genuine recreation and social center. This particular club offers eleven club activities attracting active participation of all age groups and entire families. Their activities include trap-skeet-riflery-hand gun shooting, bait fly casting, archery and social dancing. This club has grown from just a gun club and I feel the example points out the value of an attractive comfortable club house.

One thing is important. Do your best if you are purchasing land to keep away from an area that might be absorbed by future growth and development of your community zoning and other regulations will greatly effect your decision in selecting your pro-

Continued Over Page

perty. Stay away from farm houses and at the same time make sure that you will have good accessibility as you will go shooting through the winter months.

Sandy land is ideally suited for a Gun Club. Rain drains away quickly and there is no problem with foundations for the low and high house and club house. Usually this type of land is not as expensive as regular farm land either. Frankly, I think the best way to find suitable land is seek advice of your Real Estate Agent some one who knows the zoning laws and will have an idea of likely development in the future.

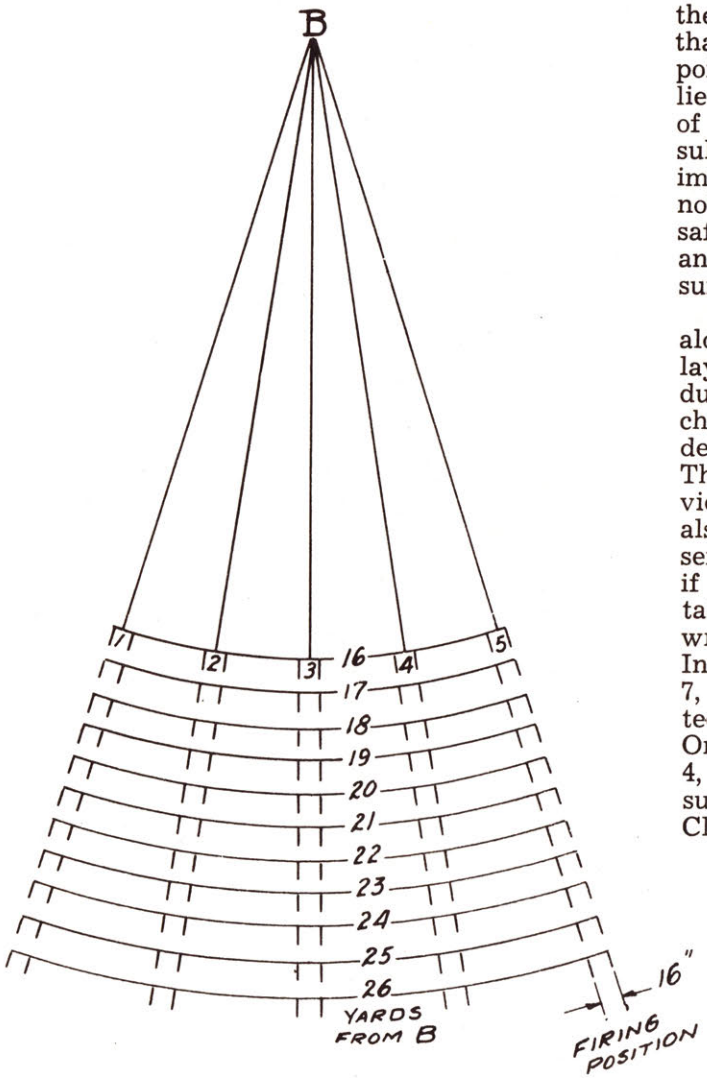
Trap and skeet fields should face North-East or North. Go out on several different days to see if the sun is going to be in the eyes of the shooters, particularly at the time of day when you expect to use the club. There should not be any high obstructions in the line of view since the sky is the best background for visibility of targets. Take a look at the illustrations showing traps and skeet layouts. They will give you an idea of the amount of land required for trap shooting 100 x 300 yards, for skeet — 600 x 300 yards. The quail walk depends entirely on location and proper layout.

To start off with you should have at least 5 to 10 sportsmen who are genuinely interested in the club foundation. From there on this group will spread the news of the budding club. Contact your local sporting goods, hardware dealers, gasoline station managers, merchants, lawyers, doctors and dentists. Tell them what you are doing. You'll be surprised at the enthusiastic response you will receive.

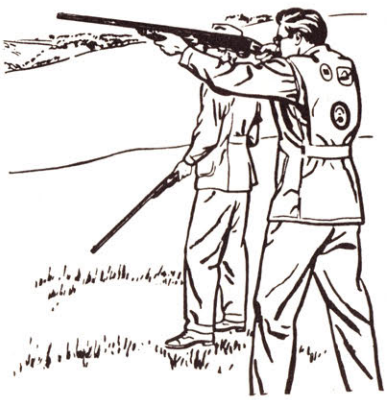
Make sure in your inaugural meeting that the 5 to 10 originals know definitely what they are about. They will need to know approximate costs and have some suitable locations selected. In other words form your plans delegate responsibilities and then get down to business.

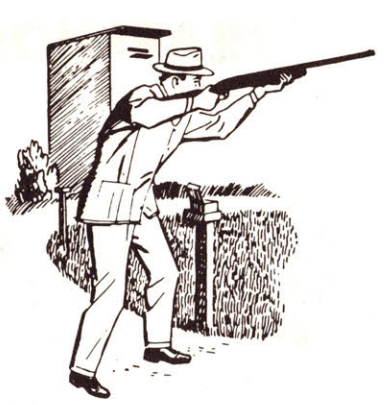
You may have noticed that I keep saying the Barrie Gun Club Incorporated rather than just the Barrie Gun Club. From my point of view Incorporation is a must, to relieve individual members of liability in event of litigation. Your attorney should be consulted regarding this. Insurance is another important consideration. Many Gun Clubs do not carry insurance, but shooting sports are safe sports and insurance to cover members and spectators is much cheaper than insurance on your car.

One of the first things you will need along with your property is a proper skeet lay out and or trap lay out. Canadian Industries Ltd., Remington Arms and Winchester have free booklets showing complete detailed drawings of traps and skeet layouts. These companies are most helpful in providing score sheets without charge. They also have field representatives that they will send around to help with your tournaments if you plan on holding any and you certainly should. Here are the addresses to write for any help you may need: Canadian Industries Limited, 1303 Yonge St., Toronto 7, Ontario, Remington Arms of Canada Limited, 36 Queen Elizabeth Blov., Toronto 18, Ontario, Winchester Arms Co., New Haven 4, Connecticut, U.S.A. Good luck and lots of success in your efforts to establish a Gun Club in your area.

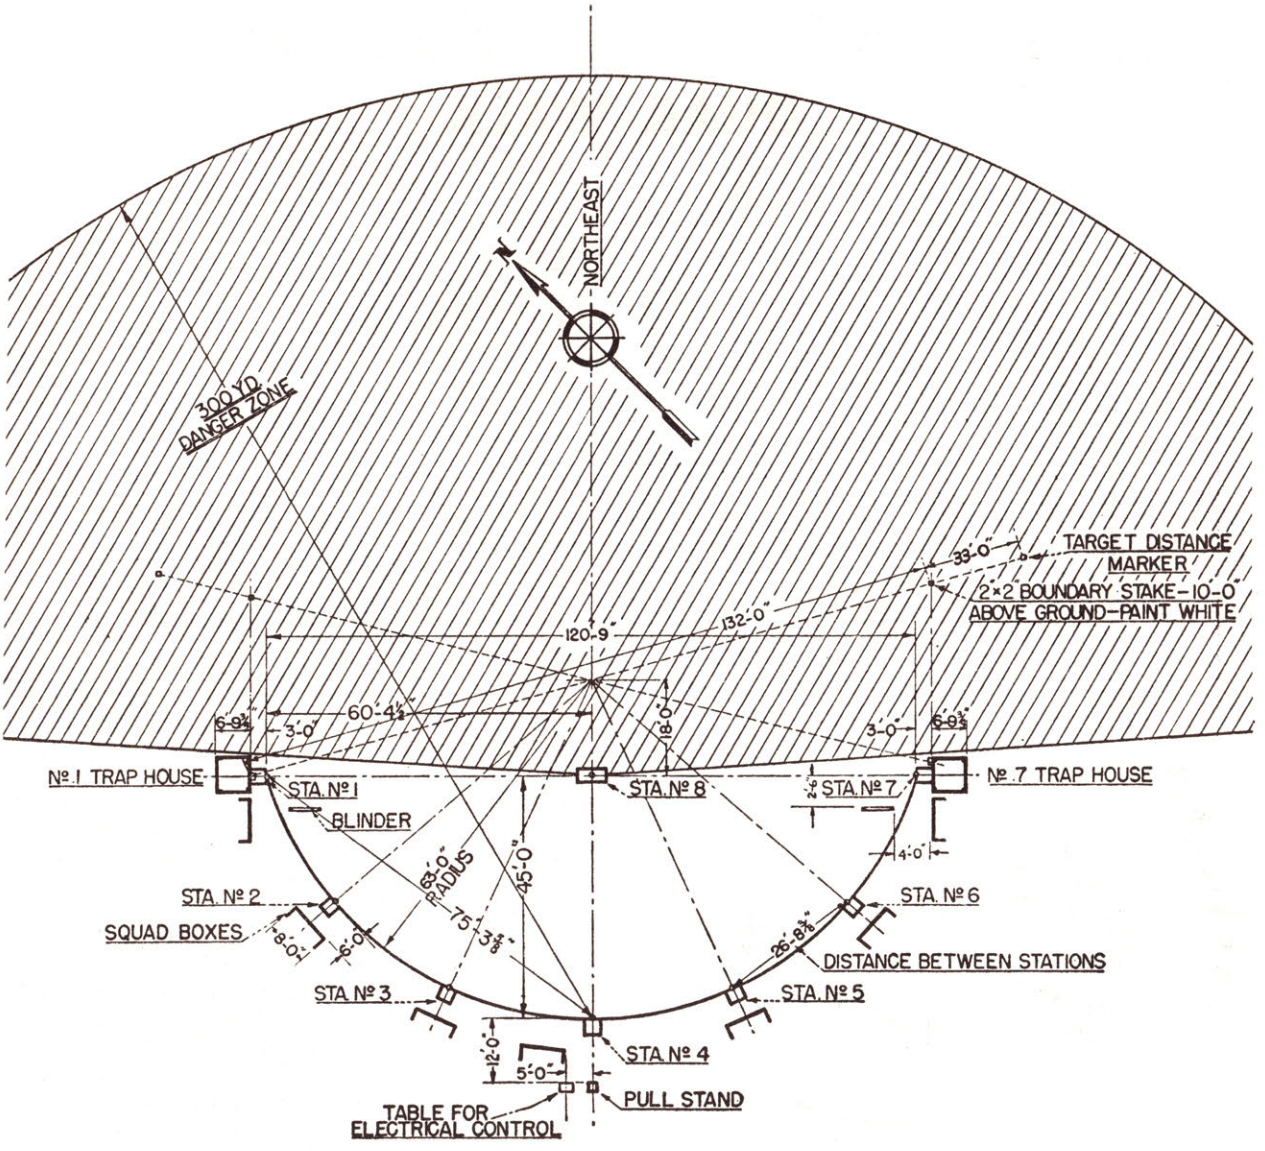


TRAP AND FIRING POSITIONS
B - Trap.
1 to 5 - Firing Points spaced 3 yards apart and sixteen yards from B





Layout of Skeet Field



SKEET

A tract 600 yards by 300 yards, with the shooting semi-circle located in the middle of the long side. Fifty yards must be added to the long dimension for each additional Skeet field, so that a club with two fields will require a site 650 yards by 300 yards.

TRAPSHOOTING

A tract 100 yards by 300 yards, with the trap located in the middle of the short side, provided the layout is located in open country where persons approaching may be easily seen. In a timbered or brushy location, a site 300 yards square is preferred. For each additional trap, add 30 yards to the width of the field. Thus the minimum area for two traps would be 130 yards by 300 yards.

QUAIL WALK

For installation of a quail walk or other form of progressive shooting, minimum measurements should be the same as for Skeet—600 yards by 300 yards—**plus** such additional ground that no shot will be fired toward a boundary less than 300 yards away.

A LOT TO LEARN.....

Waste of game of any kind was almost unheard of among the Indians. In the main they killed game only according to their needs and they were always aware of the necessity of conserving the game in their territory.

One tribe - the Wiandotte spared all female game at certain seasons. The killing of female bears at any time was forbidden by some Iroquois tribes. The Penobscot tribe never took breeding beavers. Hunting grounds were given definite boundaries by most families among the Algonquin tribes and they kept a careful count of the game populations within their territories. If a specie appeared to be diminishing in number closed seasons were enforced. It was a basic principle by all Indians that there should not be wanton slaying of any wild life. This principle the Indian attempted to teach to the white settlers with little success. Long after the first European immigrants came to North American wilderness did their leaders appreciate that wild life is not inexhaustible and that measures must be taken to preserve it.

The Indian was a conservationist because he had to maintain the basic necessities of life. He was also a remarkable hunter and sportsman, one who all modern hunters can respect for his courage and skill with the most primitive of weapons.

PRONGHORN

FLEET-FOOTED PRONGHORN ....

If the Olympic standard would only permit a Pronghorn to run for Canada in the 440 we would get at least one Gold Medal out of the effort. Unfortunately the Pronghorn does not run to establish its superiority—it relies on its speed as a safety device.

But for the hard work of provincial government in implementing conservation policies and making sportsmen stick to them —the Pronghorn would have long ago lost its fight for survival.

This game animal — kin of the deer — once roamed the Great Plains region in massive herds. It has been estimated by wildlife experts that in the place of what is the modern day population of the Pronghorn there once were 40,000,000 of these animals.

To look at a congregation of Pronghorns in the days of the early West was to see a virtual sea of white-rumped, reddish-brown animals. A living mass of white-splashed necks and pale abdomens that gamboled across the plains. A mile a minute was the top speed of the Pronghorn—an animal with almost inexhaustible energy while in motion.

The Pronghorn is a game animal with a built-in warning system. Curiously enough Nature has provided it with a "reflector". The reflector is found in the circular white rump patch. It is a mass of long hairs over a muscular sheath. When the warning system goes into operation the muscles cause the hairs to become erect—in the shape of a shield. The hair has a peculiar quality in that it reflects large amounts of light. A Pronghorn bounding over the plain — with its reflector rump in operation can telegraph a warning to other members of the specie as far away as three miles. Without a sound whole herds are alerted to any presence of danger.

But the Pronghorn needs his "reflector" because he has a sense of curiosity that gets him into trouble. This sense almost proved the undoing of the Pronghorn—in the face of guns shouldered by hunters. At one time there was a wholesale slaughter—their meat brought high premiums on the market; the growth of communities with arteries of communication cut deep into the home of the Pronghorn and they have moved out into upland plains and mountainous areas for refuge.

Antilocapridae — that's just another name for the Pronghorn, but behind the name lies an interesting fact—the Pronghorn, according to some authorities, is the only living hoofed mammal whose ancestors were native to America. Identification of this handsome creature by scientists was no easy task—it has some of the features of the deer family—since it did not relate to any group of animals classed in the group "even-toed hoofed mammals". All this when added up means—the Pronghorn is a separate family of animal.

Winter brings with it the deadly enemy of the Pronghorn—snow, deep and drifting. Caught in snow the Pronghorn becomes a flounderer and easy prey for the predators—the wolf and the coyote. Often if the Pronghorn does not fall prey to its natural enemies it is trapped by the long-suffering trial of starvation in winters of severe intensity.

Conservationists, government agencies and good sportsmen can never restore the Pronghorn to its original habitat—now encircled and sometimes engulfed by the pressing progress of civilization—but they are doing what they can to ensure that by good game management future generations will thrill to the challenge of a chase with "the fastest animal"—the Pronghorn out in front —running.

TRIGGER TALK—If you go out in the woods—into good pheasant country or stalk through the natural habitat of bears—do you know what you have run into if you see more than two of a specie?

What about crows roosting in a tree? A covey—yes, but also a bovey, flock, bunch and clutch!

Here are a few more "collections":

a fleet of sheep is called a flock;
a bevy of wolves is called a pack;
a school of buffalo is called a herd;
a troop of partridges is called a covey;
an audience of peacocks is called a muster;
a flight of larks is called an exaltation and if it is starlings it is called murmuration;
a swarm of foxes is called a skulk.

MASS HUNTS

A mass hunt was both a great social and significant and religious event in many Indian groups. There was often solemn dancing, sometimes fasting by the leaders of the hunt who also prepared special and sacred batons of office. Some tribes insisted that even the arrows used on a hunt had to be treated by the medicine men to their specifications. In most Northern tribes a sacred tobacco was smoked in a long-stemmed pipe, or the traditional calumet, after the route of the hunt had been determined or the quarry had been sighted. In all cases there were customs that had to be followed rigidly and innumerable taboos to be observed. The discipline of the tribal hunt was strict.

The nature of the mass drive or tribal hunt depended on the game and the terrain. Most deer drives involved some kind of a huge corral which enabled the hunters to force the deer unsuspectingly down a gradually narrowing passage-way, where other hunters awaited them. The Menomini prepared for the hunt by felling many trees to form a giant "V", which ran for several miles through the woods. The trees were dropped so that the trunks remained attached to the stumps but lay close to the ground always pointing in the same direction.

When the drive began, a band of hunters concealed themselves at the apex of the "V", other hunters—and sometimes their women and children—gathered at the wide end of the "V" and walking slowly and noisily forward, moved toward the bottle-neck. The deer fled before them, but the drive had to be well-paced. If the hunters moved too fast, the deer became panicky and leaped over the fallen logs and out of the "V". But when the hunters proceeded cautiously the deer followed the line of least resistance inside the barricade and finally found themselves trapped.

CANADIAN HUNTER ....

Great discoveries are often made by accident — prospectors have stubbed toes on rock out-croppings which later became gold strikes and chemists mixing compounds have exploded laboratory truths. It was by pure accident that it was discovered that the first Canadian was a hunter. He came from over the rim of the northern world out of Siberia. He was a hungry man in search of food. His larder was filled with meat of animals of another world. His "big game" hasn't roamed this world for thousands of years. Canada's first hunter pursued the mammoth, the cave-dwelling ground sloth and the mastodon.

Legend and lore have it that the Indian was the first hunter in what is now called Canada. His prowess is told in story, in film and in poem. But, he was not the first to assault the woods and terrain of the country in search of game. In 1924 the discovery was made that revealed a peculiar form of spearhead arrow. Near Mortlach, Saskatchewan, a young Englishman was out on an Indian arrow hunting expedition. In his prodding and prowling around the countryside he found a flint that had no peer in his collection of arrow heads. Indented at the base, grooved on either side, the flint was long and tapering. In the hope that some one else would find such a flint he placed his find in his collection and waited.

New Mexico flashed into the news with an item about a similar flint spearhead found buried in bone fragment. It was located in the bone fragment of a Taylor's bison. For the uninitiated this specie of bison is not new — it roamed the feeding grounds in New Mexico in great numbers — it has been extinct some 10,000 years.

With two discoveries now in the record book the scientists began to take a keen interest in these events. They investigated the two finds. With the resources of their work a tracking operation began that backtracked the grooved spear hurler down the Mackenzie valley, with more clues the trail swung up the valley toward Arctic country and on into the lank of the Yukon and into Alaska.

Here was a tough assignment — crime laboratory experts have never had to deal with this type of problem — here the scientists were searching for a man they had never seen, about whom they knew little except with bare clues. A search extending back over 10,000 years in the life of this globe.

Conclusions were reached after sifting and sorting the evidence that include these facts: Canada's first hunter came out of the north-west corner of this land on a journey that took him over the ice bridge of frozen seas — out of Asia into a new land. An alternative conclusion might be that he came in warmer atmospheric times in skin covered boats hedge-hopping from island to island as he crossed the sliver of water that we now know as the Bering Strait.

But this man did not come alone—he, according to other evidence, may have in concert with others "invaded" our shores some 20,000 years ago. This means that for 10,000 years our Canadian hunter roamed the hunting grounds, scanned streams and fended for himself. It is concluded that these people came in waves of migrating masses.

WIRED FOR SOUND?

The man who stumbled on to the gadget called a buck call may have discovered more than he intended. It was primarily designed to give the hunter advantage over the four-footed fleet deer. Once an instrument roughly shaped, with about as much neat appearance as a twice-chewed cigar — the buck call of today is a finely designed piece of hunter's equipment.

But what the originator of the buck call did not know — or guessed at — was that he has found a system of communication between a buck and a doe. He opened the door to the question that has puzzled man for years — do the male and female deer "call' 'and do they "communicate"?

The most popular sound out of a deer is when at a tender age it blats; other more unpleasant sounds from these animals are heard if they are wounded by gunshot. But apart from this what actual sounds do they make? One answer is — no sound at all (other than that of bodily movement).

Does the buck call reach the buck in the same manner and tone as the original call or has the buck a specially built-in antenna or yaggi that transforms the sound into something unintelligible to the human ear but what is in fact a beautiful sound for the buck to hear. (The call of a mate decoded into a sound that brings the buck a-running.)

Does this antenna or radar system have a built in "alert" system? How is it that the deer when approached within certain ranges suddenly is off like a shot, leaping behind some large, bushy cedar or around the sharp corner of a rock out-cropping?

What assists a doe to project an alarm to fawns? Is there somewhere within the beautiful head of a doe a special "early warning system? How is it that a doe without emitting any sound at all can warn fawns of approaching danger?

Dog experts know that with the use of a silent whistle, pitched beyond the range of human ears, they can communicate with their animals. Can it be that there are sounds so highly pitched passing between the creatures of the forest that human beings are unaware that messages of warning, or caution or imminent danger are passing by their ear drums?

AND THEN THERE WERE NONE!

"DATELINE — OTTAWA, January 1, 1990 — At a meeting of the Provincial Governments' Conference on Wildlife the ten Ministers of Game and Wildlife unanimously agreed that there is no longer a need for regulations governing the fish and game of Canada. It has all been removed by indiscriminate hunting and fishing practices by thousands of Canadians".

Now wouldn't that kind of a story bring Canadians up short in their tracks—no game to shoot—no fish to catch. All gone! What makes you think it will not happen? This may be a perfect prediction, a forecast of things to come! What are you doing to guarantee that "it can't happen here"?

There was a time—around 1961—when the provincial governments worked at feverish pace to ensure that regulations enacted protected the game and fish of their Province. They preached—they legislated—they regulated—they controlled. They did everything humanly possible (except that one thing they could not do). Protect an image in the minds of the sportsmen of the nation that unless they recognized the importance of laws to protect all forms of wildlife and paid more than lip service to regulations they could by their callous disregard of regulations destroy the wildlife of Canada.

In other words sportsmen have mismanaged their heritage of an abundance of game to the point where it could be destroyed; they relegated deer, bear and other wildlife to the doom of rotting garbage in the forest.

History proves that man needs to be controlled in his relation with wildlife. The Indian did it by instinct — permitting so many to live in order that they might propogate the specie for future generations. The early Canadian pioneers recognized that all the game and wildlife they needed was what they could economicaly use.

Today man has to have a legal-muzzle placed over his gun barrel, a red tape sticker wrapped around his trigger finger in order that wildlife will be safe-guarded for the enjoyment of future generations of Canadians.

Every year Provincial Governments are required to put more teeth into their legislation protecting wild life—and why, because man takes a bigger bite out of the wildlife population than he can economically digest!

Civilizations are spreading out, cities pregnant with expansion, pushing back the natural habitat of wildlife. Hunters are moving out like columns of the Eighth Army into the woods and hunting areas. But they should pause lest the land they hunt in becomes like the land in which the 8th Army so valiantly fought—a desert, barren of wildlife, forest and glade denuded of the deer, moose, bear and other animals.

To point up the problem what is being done in your part of the world by hunters? Do they adhere to the laws and regulations or do they consider them acts of Parliament without meaning! Do the hunters you know practice conservation. Do you? Are you one of the "sportsmen" who rather than point out a hunting regulation breach on the part of a fellow hunter just overlooks the act with an attitude of "hail hunter, law skirter!" Or do you take the position that a law-breaker in the woods is a menace to the existence of wildlife, a part of Nature that is entrusted to your safe-keeping?

If you are around in 1990 are you going to be able to read through feeble eyes with a weighted conscience:

Ottawa, January 1, 1990—At a meeting of the Provincial Governments' Conference on Wildlife the ten Ministers of Game and Wildlife unanimously agreed that there is no longer a need for regulations governing the fish and game of Canada."

PHOTOS ON PAGES 44, 45, 46, & 47
BY COURTESY OF
NOVA SCOTIA INFORMATION SERVICE

Nova Scotia hunters and sportsmen have raised cudgels with the Legislature—they are pressing for reform of the Provincial fish and game laws.

Reform measures by tradition take a long time. History gives convincing evidence that reform measures are better obtained through group pressure than by the orations, pleas and heart-breaking work of an individual.

In Nova Scotia the hunters have made their stand for reform through the Province's Fish and Game Association — a strong body of men dedicated to the stand that hunters should take in developing good conservation and hunting practices.

The sights of hunters in Nova Scotia have switched from bearing down on wildlife — to pointing straight at the Members of Parliament. The Nova Scotia Fish and Game Association has some valid suggestions to make dealing with hunting legislation—they want these suggestions to come before the Legislature with all the force, emphasis and consideration that can be mustered either on the floor of the House or in the Committee delegated to study hunting legislation.

Members of Parliament—and the Legislature will be faced with the reasoning of 5,000 Nova Scotia hunters and sportsmen, a mighty formidable force; sifted down in committee study and crystallized in representations to the provincial government.

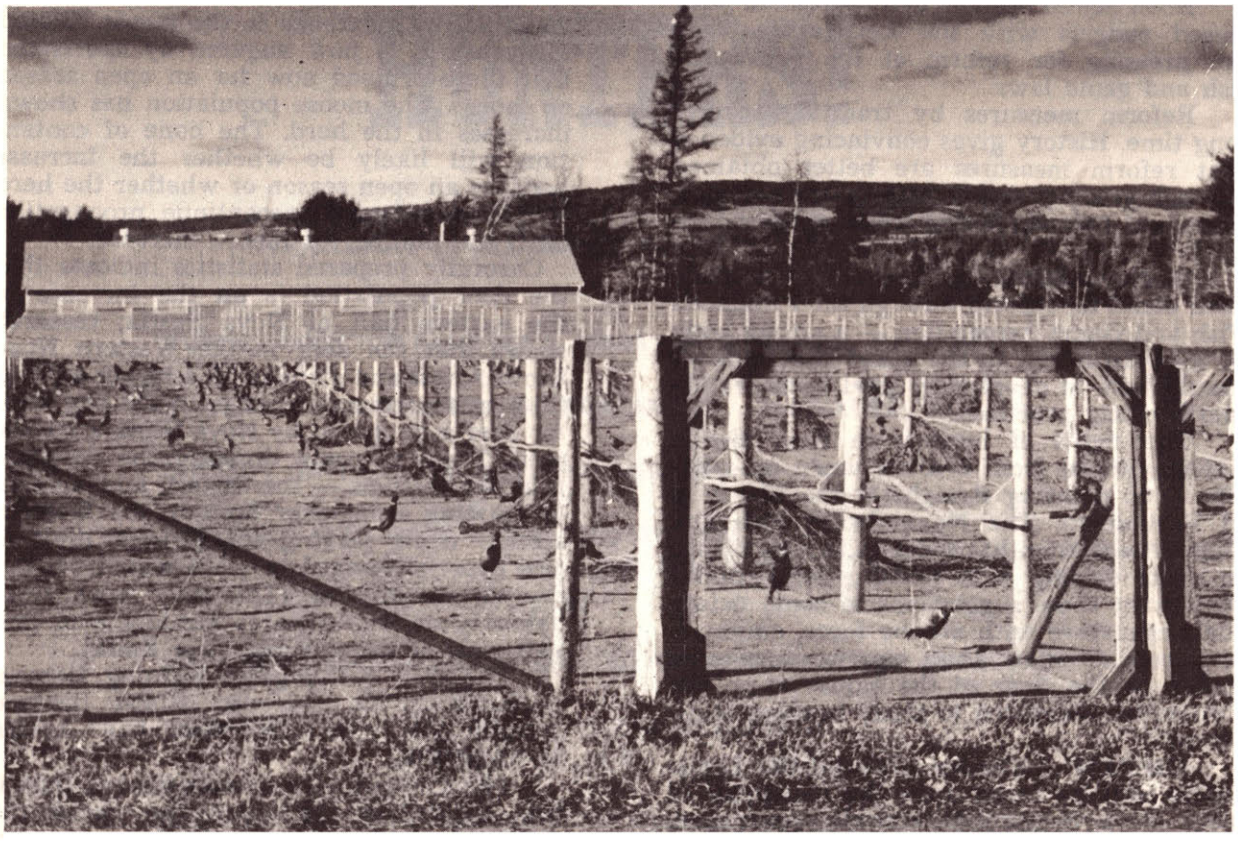
Proposals to the Government are triggered off by reference to the moose. Closed for years, it is now augered by sportsmen that there is need now for an open season on moose. The moose population has shown increases in the herd. The bone of contention will likely be whether the increase justifies an open season or whether the herd should be allowed to continue propogation until the number of moose increase.

Carefully prepared statistics indicate that the deer population is on the increase in the eastern half of Nova Scotia; research shows that the deer in the Western Nova Scotia forest and glade is (a) a bigger animal. (b) a better animal. Change in the bag limit for deer is proposed by Nova Scotia's sportsmen. They advocate dividing the province into two sections — the eastern and western — creating a one-deer limit in the Western section while leaving the present limit of two deer unchanged in what would become the eastern section. (This may work some hardship on western-area hunters who presently shoot under a two deer limit.)

The sale of big-game hunting licenses in Nova Scotia recorded 60,554 licensed hunters; the provincial "deer bag" netted 26,424 animals.

The Government announcement that it has decided to abandon the decade-old pheasant raising and releasing program brought an out-cry from sportsmen. They were completely taken aback by news that

Continued Over Page



the Government (because the pheasant-raising program had been termed a failure) was dis-continuing the project.

Nova Scotia hunters have had a big target to shoot at on the bird-lands of the Province — 11,000 pheasants were released by the Department of Lands and Forests. But the pheasant had the better part of the season and only a thousand fell before the guns of the bird-men. The Nova Scotia Fish and Game Association is not entirely convinced that figures of 1960 pheasant bag are entirely accurate; it was a short season (only two weeks).

The Association's 5,000 membership is pressing for a renewed appraisal of the Government's pheasant-raising program; they are also urging their local members of parliament to consider the extension of the pheasant season to seven weeks.

In a "get tough" policy, Nova Scotia hunters want a crack-down on deer-jacking. "Deer-jacking" is a frowned on practice of hunting at night. To give weight to their case the Fish and Game men are asking for legislation that will include confiscation of cars or other conveyances used by convicted violators either to assist in the kill or in transport of the illegal kill.

The Members of the Nova Scotia Parliament will have their hands full in dealing with the proposals of the Fish and Game Association on the floor of the House and in the slower, more inquisitive atmosphere of the Committee room.

Some matters with which Parliament will not be confronted immediately include: legislation to permit hunters to shoot cats in the woods suspect of being predators of wildlife, the legalizing of Sunday hunting, new colour schemes for the garb of big-game hunters: red, yellow or orange clothing to make the appearance of hunters distinctive in the woods of the Province, an attempt to change the license fees (a reduction from $4.00 to $3.00 for big-game hunters and the institution of a small-game license of $1.00.)

The future for Parliamentarians in Nova Scotia's Legislature is almost predictable in the field of fish and game regulations — the Provincial Fish and Game Association will be the watch-dog of existing legislation, the harbinger of new regulations as the body of unpaid protectors of Nova Scotia's wild life resources.

NOT FOR SALE .....

Man is a prolific exterminator! Look over this land and try and find a living

Passenger Pigeon
Eskimo Curlew
Labrador Duck
Heath Hen.

Save yourself the time and trouble. These creatures no longer exist. Man has done an ironically excellent job in making them extinct.

Let's take the case of the carrier pigeon. A century ago passenger pigeons were sold by the bushel basket at a penny apiece. In 1961 on this hemisphere or anywhere in the world—you couldn't buy one of these birds for all the gold in the mint.

Man slaughtered the passenger pigeon; his scant knowledge of wildlife together with his greed brought about the doom—and the end—of this bird.

All that mankind has left of the passenger pigeon are **stuffed** exhibits and paintings and pictures This graceful bird, slender of body, long, tapered wings at one point in time could "black out" the sun by the flight of a migrating flock!

Today our children read of the passenger pigeon—less than 100 years ago there were hundreds of millions of these birds girating around the sky, nesting, breeding, feeding.

There are still those among the living who can recall "seeing a passenger pigeon in flight"; they speak of those days when great flocks wintered in states like Kentucky and Michigan. One flock covered an area forty miles long and from three to ten miles wide. That is as large a bird roost as you will ever find. For food the pigeons would make lightning fast darts into Indiana and Illinois and then return to their winter roosting area.

Continued Over Page

NOT FOR SALE ... **Continued**

James Audubon recorded that in 1813 he witnessed the migratory flight of one flock of pigeons. It lasted three full days. During the day the flight of the birds blotted out the sun—the sky was virtually darkened. Observation of the flights indicated that the birds flew on various height levels—and at speeds of up to sixty miles an hour.

Swift of flight—the passenger pigeon was also a tasty morsel, and this more than any other thing was the factor that lead to extinction of the specie. They were destroyed by sticks, fire and firearms. In some areas passenger pigeon demand — as a delicacy, particularly squabs or young birds—brought about the organizing of small industries whose main commodity was—pigeons. They shipped them by the barrel to hotels and restaurants across the United States.

In rural areas the young passenger pigeons were used to feed swine when the standard food supplies for sty occupiers ran short.

Strangely enough it was the Indian who was the true conservationist—the passenger pigeon was able to survive under the "game laws" imposed by the Indian. They took only the older birds for their pots — the young birds were left to reproduce. The Indians made vain attempts to persuade the white men to employ some rules of conservation to protect the passenger pigeon, but their pleas were not received with favour and the beginning of the end for the passenger pigeon was wrapped up in their failure to understand the Indian's point of view.

But, let it not be said that this was the only road to ruin for the passenger pigeon. Man in his strides for progress stripped the forests—the source of some food supplies for the passenger pigeon. With the slashing and sawing of timber the forests that produced beechnuts, acorns, pine seeds—favourite foods for the birds—soon lay awaste.

The passenger pigeon attempted to survive without the food to be found in his natural habitat, the virtual decimation of flocks for the food tables of the citizens—and failed. The result: there is not a single passenger pigeon on this earth. They have been destroyed. The passenger pigeon joins other creations of **Nature** in the category —now extinct!

TRIGGER TALK—Some neophytes unwittingly send semiphore signals to ducks letting down to land on water near to the blind. They have taken all the standard precautions prescribed by the rule book—except the overlooking of one disastrous error. Flashes as readable as semiphore are glinting off the rim of the hunting badge jauntily stuck in the cap of the hunter.

One certain way to denude a duck feeding pond is to put a duck calling instrument into the hands of an unskilled user. This may be taken by some as indicating a very effective waterfowl conservation program—but for the members of the duck hunting party it spells disaster. The user may be extremely enthusiastic in his new-found vocation—duck caller, but he will scare away far more birds from the guns poking out of the blind than he will attract.

It has been said that expert users of duck calls very often change the minds of passing ducks. In the hands of a proficient user a good call is a tremendous aid in decoying ducks.

TRIGGER TALK—In this modern age of the high-powered rifle and the telescopic sight it is difficult to conceive of the elusive mountain goat being taken by anything other than this type of weapon and equipment. At one time in the history of hunting, the Indians of the North-West mountain region hunted the mountain goat with spears. With all the cunning, the planning, natural topography and the help of the "proper religious spirits" the Indians were highly successful at killing the mountain goat with a simple spear.

PANTHERS

If you read a news item that Panthers actually live in the woods of New Brunswick you might assume that the editor of the paper had made an application to join the Burlington Liars' Club. But, there are panthers in New Brunswick!

Evidence of their presence has been established by the fact they have been seen; their tracks have been spotted on forest trails; they have been heard; and they have been shot at and deer kill have been found and the slayers have been panthers judging from the prints in the vicinity.

It takes no expert in the woods or a veteran hunter to etablish that these are big cats—not when measurements of prints are reported to be from 4" to 5½" wide.

Men who are in the position to know estimate the population of the big cats in New Brunswick at between twenty and twenty-five. Hunters claim that the main sources of food supply for the panthers are the raccoon and the porcupine, and it is an established fact that they kill deer.

DON'T ARGUE !

The proper designation of wildlife has been known to cause arguments in hunting camps. The following list covers some of the better known Canadian game—

Species	Male	Female	Young
Antelope	buck	doe	fawn
Bear	boar	sow	cub
Beaver	male	female	kit
Buffalo	bull	cow	calf
Caribou	buck	doe	fawn
Cats	tom	lioness	cub
Coyotes	dog	bitch	whelp
Deer	buck	doe	fawn
Duck	drake	duck	duckling
Elk	bull	cow	calf
Fox	dog fox	vixen	whelp
Goats	billy	nanny	kid
Goose	gander	goose	gosling
Moose	bull	cow	calf
Pheasant	cock	hen	chick
Quail	cock	hen	chick
Rabbit	buck	doe	fawn
Sheep	ram	ewe	lamb
Swan	cob	pen	cygnet
Wolves	dog	bitch	whelp

Summation of gun handling safety rules: Be conscious at all times of the direction your gun is pointed, and where a bullet would strike if your gun was discharged at anytime.

MRS. HUNTER!

SATIRE BY DOUG. VAISEY

It is four a.m.

The station wagon loaded to the axle roared out the driveway, wheeled into the boulevarde and seconds later disappeared around the corner of the hedge. Then, for one fleeting second there was a glimpse—a flash of red from the driver's hunting cap. The hunter was off to the hunt!

Standing in the doorway clutching in one hand a long sheet of paper was the hunter's wife. Her free hand had just gone through the progressive stages of wishing a hunter a bon voyage. Stage one is the enthusiastic saluting wave to the man of the house off on the quest of wild life; stage two is the alarmed quickened jerk that communicates to the husband the thought in the mind of the wife (Watch out there here, don't clip the corner of the hedge!) and stage three is the resigned, almost pathetic flip of the hand that brings Mrs. Hunter back to reality — the business of checking over the lengthy list of hunter's accoutrements —the mixed bag of tricks, triffles and treasures.

It is at this point in time — this single instant — that the neurosis of the hunter's wife begins more commonly referred to as "housewife's heartache" or "hunteritis". Symptoms of this ailment of hundreds of Mrs. hunters are best depicted by the ordinary calendar of events. for the household.

Lets visit with the Mrs.!!

(It will take about four hours for Mr. Hunter to collect together the other members of the hunt party, load the individual gear and equipment for this six-man deer hunting army, and travel two hundred miles to the camp. Over well-paved road and down a country bumper, crash and carry over an old lumber camp trail and then—a two mile walk through dense forest and underbrush, skirting marshes to the place known to the men as the "Trout Lake Gun Club" — the home of this six-man party for seven days.)

Wait a minute—on this visit Mr. Hunter hasn't left yet! He is still at home standing in the middle of his living room surrounded by the things he WANTS to take on the hunt; the necessities of the hunter. Food, clothing, firearms. Inside the shoulder pack is some gear that Mr. Hunter hasn't counted on carrying. Some little things that his wife likes to make sure hubby has on the hunt. Hubby has an old relic of a tooth brush. He has carried it on the hunt for half a dozen years. (Mrs. Hunter has secreted in her "hunter's kit" three tubes of toothpaste and about twelve pounds of other assorted "little things" to keep her hubby happy while hunting).

Now, Mrs. Hunter hasn't bothered to tell hubby about the twelve pounds of extra gear or that she has put in extra socks, two woollen shirts, an extra pair of jeans and an old pair of shoes. This he will find out to his sorrow after he has slugged the smuggled stores over the rough two mile trail. So for the first phase of the hunt—the travel or approach to the hunt camp—Mr. Hunter really becomes Mr. Slugger. If you have ever carried extra heavy gear over two miles of hog's back range country—your sympathy will be with Mr. Hunter.

But now the boys are off — away to the hunt!

"Hey, did Pop get away?", is the question the Hunter twins raise as Jack pursues Jim around the corner of the breakfast nook. "Did he take that pile of stuff off the living room floor?" queries Jack. "Say where did it all come from?" pips up Jim.

Now there is a good question thought Mrs. Hunter going through some mental gymnastics that cast her mind back over ten years. (His first gun was a .22 rifle slung over his shoulder when he walked to the end of the street for target practice on the Gun Club shooting range. Now, with a note of chagrin; the idea crossed her mind—it takes one-sixth of a loaded station wagon).

Yes, it's all gone," said Mrs. Hunter, "and now its time for breakfast".

Breakfast!! Did the camp cook get in last night in time to get unloaded before dark? Will hubby get a square meal breakfast on the first day—he's such a grumpy character if he doesn't get two coffees with four cubes of sugar.

"Mum, do I have to walk to school today or can I take my bike?" said Jim.

Walk!! Oh, dear I wonder how hubby got along scrambling over that old trail—and the bridge they had to cross a mile this side of the lake — did it hold? They say every year when they come out: "Let's go back one fine week-end and do a real job at making the bridge secure. You know if it ever went when we were crossing it with the wagon, we'd be gonners". This flash-back of good intention focussed the mind of Mrs. Hunter on the imminent danger of crossing the bridge.

"If you're going to cross a bridge, you'd better walk today, Jim", she said.

What's that Mother — are you feeling all right", said Jim with a note of caution in his voice, "All I want to do is go to school —no bridge crossing for me today".

Sorry, Jim, "my mind was miles away, said Mrs. Hunter.

Mr. Hunter had unwittingly mentioned the "old bridge" a week or so before the hunt. "It's a virtual death trap", she had said, "it goes unattended 51 weeks of the year".

"With a wing, a prayer and a push we'll get through this year, dear," was the consoling remark to Mrs. Hunter in an attempt to delete this "neurosis factor" from her mind.

You may be doing the pushing—but I'm the one who does the praying, is the unspoken retort to this wishful statement of faith in nails and logs.

Coffee break!

In they come — the neighbourhood wives. This is known in the coffee club circles as the re-hash of resolution and defeat. Here it is — on this day when the coffee conversation takes this hue:

"Why do you let him go?"

"What do they really do?"

"I wonder how good a poker player Jack is?"

"Suppose one of them gets sick — you know like a sore throat or something serious like that"?

Sore throat—that is a simple sickness —thought Mrs. Hunter who vividly recalled all the details of a hunt when hubby in an attempt to shorten the walking distance to his deer run station short-cutted across a pond. And — the ice broke. Hubby took a header into the freezing cold water and later remarked, "Why I shook it off like a Labrador spraying water". Hah. Shook it off, eh! It took two weeks of nursing and nagging to put hubby back on his feet after they had brought him home from the hunt. They stayed the full seven days. Rick, who acted as spokesman for the hunters had said, "He's just got a slight cold; be all right in a few days". A few days — that's not what the doctor said, "keep him in bed for a week or more and when he gets some strength back you can let him sit up for an hour".

In the middle of the second cup of coffee the chatter was interrupted—the telephone rang.

Three wives paled—the others held their breath. "You take it", "no, I couldn't"—finally one of the non-hunter wives picked up the receiver.

"This is the National Poll on Shotgun Safety. We would like to ask you this question: Do you think orange colours are safer in the woods than red?" queried the interviewer.

This opened the door for (a) a sigh of relief, (b) a poll of the group.

"We think that a red-striped shirt, like a basketball referee's shirt would look very good", said the poll replier.

"A what—red-striped", roared the voice on the other end of the line, "I must have the wrong sport".

Red-striped!!

Mrs. Hunter sat up short. Filtering through the decade of hunts came the voice of hubby saying:

"You know I could have been killed. Some guy on the next hog's back let go with a fast shot and—why do you know it clipped the corner of my cap visor—shot it clean away".

(Mrs. Hunter re-lived the conversation and gripped the arms of the chair to keep from keeling over. It was so close—it could have been hubby's first shooting accident —and his LAST.)

Lunch!! In popped the twins and automatically Jim flipped the radio switch:

"And now the news: Five men today carried an injured hunting companion two miles over a rough track to their car. . . . .

(Five and one is six—and two is—oh, no it can't be . . .).

"The injured man was struck by a falling limb. He is one of a party of American hunters in the deer country near Upper-fludick Flats", droned on the voice.

Hang on mother—that was another close call. Don't be panicked by these telephone calls, radio reports—hubby is doing fine—he's hunted before.

Hunted before!!

(Why he hasn't been out with a gun since the last year's hunt. I wonder what shape he is in—been getting a little flabby around the mid-section. I wonder how his heart is—great day in the morning, he didn't have his physical check-up last week. Well he's got his vitamin pills packed in "my" bag in his kit!).

And so you can see how it is.

The hunter goes off to the hunt.

The hunter(ess) is embroiled in unrelated incidents that point to a specie of neuorosis that flowers and flourishes during the days of the hunt until, finally the poetic line.

"Home is the hunter home from the hills" rhymes with the pharmacist phrase

"And the hunter(ess) free from the pills".

KEEP HUNTING A SAFE SPORT

1. NEVER POINT A GUN AT ANYTHING YOU DO NOT WANT TO SHOOT: avoid all horseplay.
2. UNLOAD GUNS WHEN NOT IN USE, take down or have actions open; guns should be carried in cases to shooting areas.
3. TREAT EVERY GUN WITH THE RESPECT DUE A LOADED GUN.
4. WATCH THAT MUZZLE! Carry your gun safely; keep safety on until ready to shoot.
5. BE SURE BARREL IS CLEAR OF OBSTRUCTIONS, and that you have ammunition only of the proper size for the gun you carry.
6. BE SURE OF TARGET BEFORE YOU PULL TRIGGER; know identifying features of game you hunt.
7. NEVER SHOOT A BULLET AT A FLAT, HARD SURFACE OR WATER; at target practice be sure your backstop is adequate.
8. NEVER CLIMB A TREE OR FENCE OR JUMP A DITCH WITH A LOADED GUN; never pull a gun toward you by the muzzle.
9. AVOID ALCOHOLIC BEVERAGES before or during shooting.
10. STORE GUNS AND AMMUNITION SEPARATELY, beyond reach of children.

KEEP SHOOTING A SAFE SPORT

CANADA offers unrivalled opportunities for big game hunting.

In the vast wilderness areas extending from the northern parts of the provinces into the Northwest and Yukon Territories, game and animals both big and small live and multiply. They are the mainstay of our native citizens and provide enjoyment for all of Canada's people.

The advance of civilization has driven game animals from most of the southern parts of the provinces but there are still districts well-stocked with game throughout the length and breadth of Canada which are accessible by railways, highways, and other means of transport.

Both the Federal and Provincial Governments are keenly interested in the conservation of wildlife resources and have enacted laws for their protection which have been so successfully applied that many famous hunting areas are better stocked with game today than they were thirty or forty years ago.

Some of the methods of conservation which have been adopted include the setting apart of large tracts of public lands as game preserves and in the rigid protection of wildlife in the extensive national and provincial parks. In these areas, which include in the aggregate many thousands of square miles, the wildlife tends to increase and may overflow into the surrounding country, restocking it and adding to the game supply available for the hunter. This favourable condition, together with sound protective legislation regulating open seasons, bag limits, the issue of licences, and in some cases year-round close seasons for species which show the effects of hunting pressure, is a powerful factor in perpetuating wildlife.

Each province enacts its own laws relating to big game, fur-bearing animals and non-migratory birds. While the game Acts of the different provinces vary in detail, the general policy is the same and consists in defining the hunting seasons, protecting certain animals by close seasons, limiting the number of each kind that may be taken, and other related provisions. As the regulations are subject to change, prospective hunters should obtain up-to-date copies of the game laws of the province they intend to visit.

AFTERTHOUGHT..

IN THIS OUR FIRST EDITION OF "TRIGGER TALK", WE HAVE ATTEMPTED TO GIVE THE HUNTER AND THE CASUAL READER A CROSS-SECTION VIEW OF CANADIAN HUNTING AND VARIOUS SHOOTING ACTIVITIES. WE HAVE HAD ASSISTANCE FROM MANY SOURCES, BUT, WE REALIZE THAT OUR EFFORTS MAY HAVE FALLEN SHORT OF THE PARTICULAR NEEDS OF SOME. OUR TREATMENT OF DIFFERENT AREAS OF THE COUNTRY AND SKETCHES ON SHOOTING CHAMPIONS HAS BEEN LIMITED BY A LACK OF INFORMATION SOURCES, NOT FROM ANY DESIRE OF OURS TO DISCRIMINATE. FOR THIS REASON, WE EARNESTLY INVITE YOUR COMMENTS, SUGGESTIONS AND CRITICISMS. HAVE YOU A CANADIAN HUNTING STORY THAT WOULD BE SUITABLE FOR SUBSEQUENT EDITIONS OF "TRIGGER TALK"? - IF YOU CAN HELP US BY SUPPLYING SUCH MATERIAL, PLEASE WRITE TO LANDRY STUDIO.

AMERICAN HUNTERS, CANADIAN OVERSEAS, AND PEOPLE IN REMOTE AREAS OF CANADA, MAY WISH TO OBTAIN A COPY OF "TRIGGER TALK". WE OFFER THE FOLLOWING MEANS: WRITE TO LANDRY STUDIO, 509 BONNACORD STREET, PETERBOROUGH, ONTARIO - ENCLOSING $2.95 & .25¢ FOR MAILING, AND YOUR COPY WILL BE FORWARDED TO YOU.

IN FUTURE PUBLICATIONS WE ARE PLANNING A SPECIAL SECTION - "WHERE TO HUNT IN CANADA". THIS SECTION WILL BE AVAILABLE TO OUTFITTERS, LODGES ETC., AS A MEDIUM FOR PROMOTING THEIR BUSINESS. IF YOU THINK THIS SECTION WILL BE OF VALUE TO YOU, CONTACT LANDRY STUDIO, PETERBOROUGH ONTARIO.

POLICY-

NAACO policy is to provide the Sportsman wherever he may be with the highest quality products embodying the finest workmanship and materials available, and incorporating all proven and new NAACO safety specifications at the most moderate prices. All products manufactured or sold by the NAACO organization are covered by the following warranty:

WARRANTY

NAACO products are fully guaranteed against any defects due to faulty material or workmanship for a period of 1 year from the date of purchase by the consumer.

SALES-

NAACO products are sold in Canada by over 175 Distributors located in all parts of Canada to over 5,000 dealers. Our export affiliation is A. A. Bolte & Co. Ltd. of Montreal who covers all world markets except U.S.A. In U.S.A. Firearms International Corp. of Washington, D.C., are our sole representatives for NAACO Sporting Arms.

SERVICE-

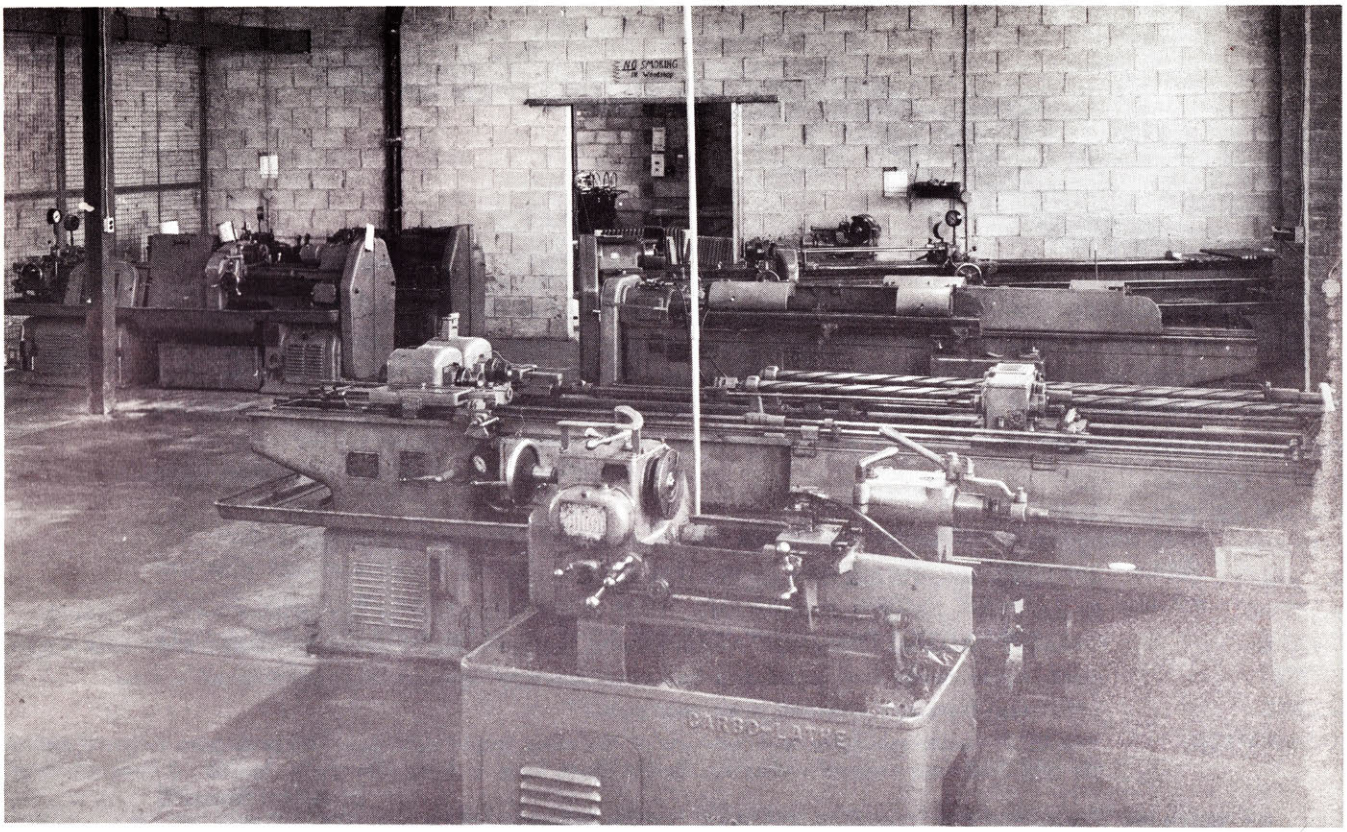
NAACO maintains a complete Service Department where all products sold by the organization are backed by a complete inventory of all parts ready for shipment to any point in the world to provide NAACO Service.

For the first time in Canada gunsmiths will be able to buy direct from the NAACO factory a full line of actions, Barrelled actions, Walnut stocks semi-finished, Walnut Blanks, Barrels, Parts, etc., to provide their customers with Custom Made Sporting Arms.

Also for the first time in Canada NAACO offers its new modern Testing Ranges to numerous Target Rifle Clubs who each evening will enjoy this fast growing sport and are guests of NAACO.

It will be a NAACO Service to arrange a trip through Canada's only complete arms plant.

NOTE— All NAACO Sporting arms, Trade Names and items published in this Catalogue are registered or covered by Patents Pending and cannot be published in any form without the written consent of North America Arms Corp. Ltd.



A SECTION OF NAACO BARREL DEPARTMENT

Here is a section of the NAACO Barrel Department where precision barrels are completely manufactured from special alloys, rigidly controlled throughout all manufacturing cycles.

For the first time in Canada a complete line of: 22 Calibre Barrels, High Power Calibre Barrels, Magnum High Power Barrels, Shotgun Barrels, Pistol Barrels, are being manufactured by NAACO and after being incorporated into finished Sporting arms are individually test fired, patterned and proofed.

Also for the first time NAACO employees are producing Sporting arms that are being exported to world markets and creating a new standard of Excellence that is fast gaining recognition of the world's most discriminating buyers.

MAKE YOUR 1961 SPORTING ARMS A NAACO.

NAACO

NORTH AMERICA ARMS CORPORATION LTD.

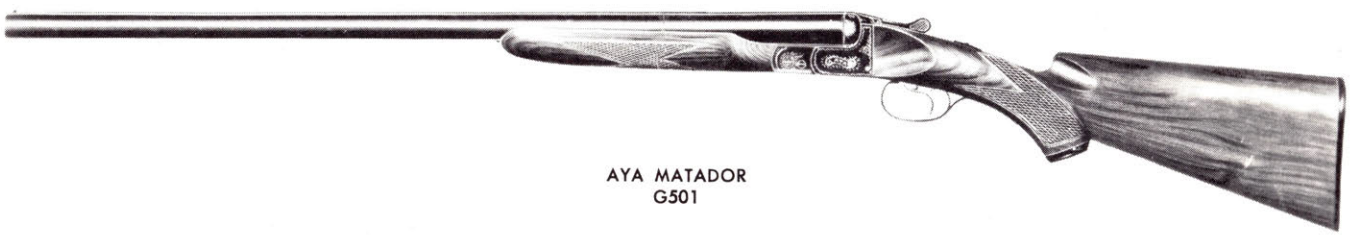
Model No. 35 Mallard 12 Ga. Magnum Automatic Shotgun 30" Barrel F.C.

3 Shot Gas operated with or without ventilated Rib

Here is one of the new models presented by NAACO for 1961. It is designed for a 3" Magnum shell and has the advantage of being able to also fire both a 2¾" magnum or a 2¾" standard. The magazine tube holds 2 shells and the chamber 1, providing the sportsman with long range effectiveness with minimum weight. Weight of the new Model No. 35 is approximately 6¼ lbs. Select French Walnut is used in forearm and stock with pistol grip and forearm finished in 16 line checkering. Recoil Pad has white line spacer between recoil pad and Walnut stock. Plain or ventilated rib barrels are available in plain or chrome lined. Stock dimensions are well proportioned and are the same as our Model No. 25, 3 Shot Pump Action. Barrels will be available in 30" FC., 28" Mod. and 26" cylinder. Due to the great number of new models NAACO is producing this year, availability may be limited in 1961.

The above Model is fully covered by NAACO Factory Warranty and Service

AYA MATADOR SHOTGUNS



AYA MATADOR
G501

Model No. 45
"AYA" Imported, Side by Side, Double Barreled Shotguns

SINGLE SELECTIVE TRIGGER, AUTO. EJECTORS. DOUBLE TRIGGER ON 10 GAUGE ONLY.

Of the many types of guns available to the sportsman none can boast of the versatility, light weight, trim line and ease of handling of the double barrel shotgun. In the Matador, we have combined all of the best features of the "double" to produce a shotgun of a quality matched only by guns selling at more than twice the cost.

AYA Matador shotguns are built on the strong box lock action of the Anson and Deeley design, with double underlocks engineered to compensate for wear. All major internal parts, including sear bars, hammers, cocking levers, etc. are made by the latest precision investment casting methods, thus permitting the use of the tough, wear resistant steels, which are necessary for long wearing contact surfaces and trouble free, positive functioning of the shotgun as a whole. All moving parts are hand polished for smooth, easy operation. All Matador guns, except the 10 gauge Magnum, are supplied with a single selective trigger, engineered to provide positive, equalized trigger pull on both barrels. The trigger is provided with an inertia block as proof against doubling. The 10 gauge Magnum gun is supplied with conventional double triggers. Powerful selective automatic ejectors on all Matadors kick out only the fired shells when the gun is opened. Unfired shells remain in the gun, but are lifted for easy removal by hand. The trigger guard is of ample size to assure comfortable shooting, even when wearing gloves. Firing pins are individually spring mounted in bushings through the face of the action and are not an integral part of the hammer. The barrels, of finest steel, are each forged in one piece with one half of the locking lugs, thus providing utmost strength. Special attention is given to boring, chambering, choking, polishing to a mirror-like finish and maintenance of absolute concentricity. The stock and fore-end, of finest close grained European walnut, are carefully fitted to the metal to provide perfect mating of metal and wood. Fine hand checkering, well fitted butt plate and pistol grip cap and positive, easy working fore-end release, plus the carefully dimensioned butt stock and fore-end, the barrel and action which have been polished and blued to a velvety lustre, and the beautiful hand rubbed, weather resistant finish, add up to a shotgun unmatched in quality, value and beauty. The guns of each gauge are proportioned for that particular gauge. The .410 Matador is one of the very few shotguns that has an action specifically built for this gauge.

STOCK DIMENSIONS: Overall Length 28", with Barrels 47". Length of Pull 13¾", Drop at Comb 1⅜", Drop at Heel 2¼", Pitch Down 2⅛", Deluxe Beavertail Forearm finely checkered. Each gauge has its own proportionate balanced action.

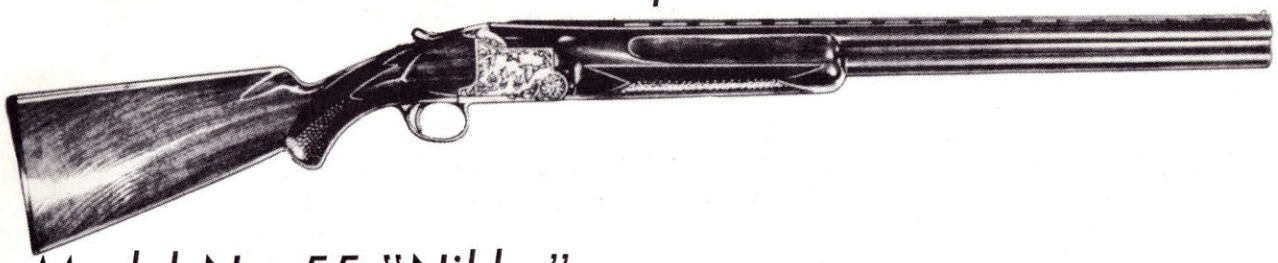
IMPORTED — OVER/UNDER SHOTGUNS



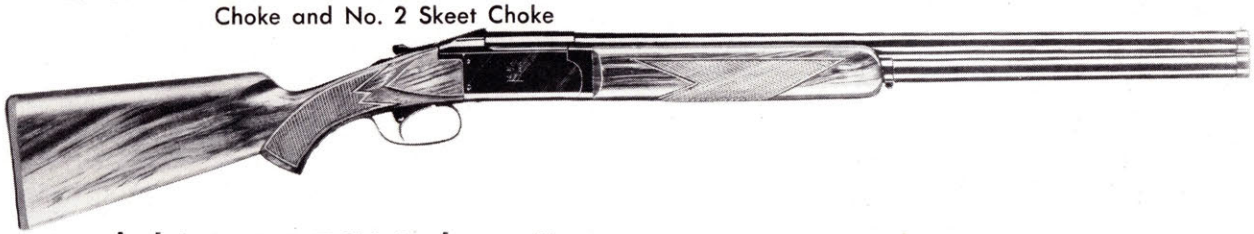
Model No. 55 "Nikko"
12 & 20 ga.

The new Nikko over and under shotgun is manufactured by one of Japan's outstanding arms plants and represents the greatest value in its field. The single trigger can fire either the top or bottom barrel with the selector which is incorporated with the safety thumb piece.

Combined with perfect balance, other features are automatic ejectors, ventilated rib, outstanding engraving and chrome plated barrels for life time wear and accuracy.

Available models are as shown below:

12 Ga. 2¾" Shell 28" Barrel F & M Choke
12 Ga. 3" Shell 32" Barrel F & F Choke
20 Ga. 2¾" Shell 26" Barrel No. 1 Skeet Choke and No. 2 Skeet Choke
20 Ga. 3" Shell 30" Barrel F & F Choke
20 Ga. 3" Shell 28" Barrel F & F Choke



Model No. 65 "Valmet"
12 ga.

The Valmet shotgun was designed specifically to meet the ever increasing demand for a moderately priced, well made, over and under. Made by Valmet of Finland, manufacturer of the world famous Finnish Lion Free Rifle, the Valmet features single selective trigger, hand checkered French walnut stock and forend, rubber butt plate, not to mention superior workmanship throughout and smooth operating time-proven action. Special ordnance steel is used in all metal parts. All parts are machined, no stampings throughout. Special attention is paid to the quality and strength of the barrel steel. The barrels are independent, therefore vibration and heat does not affect the alignment of the second barrel.

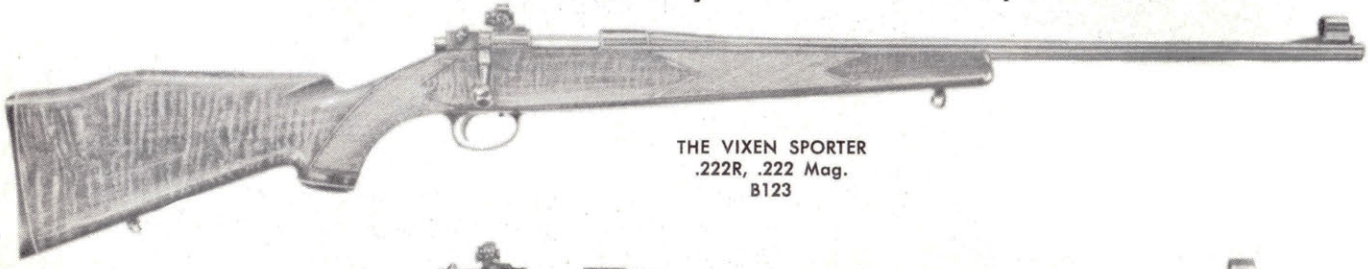
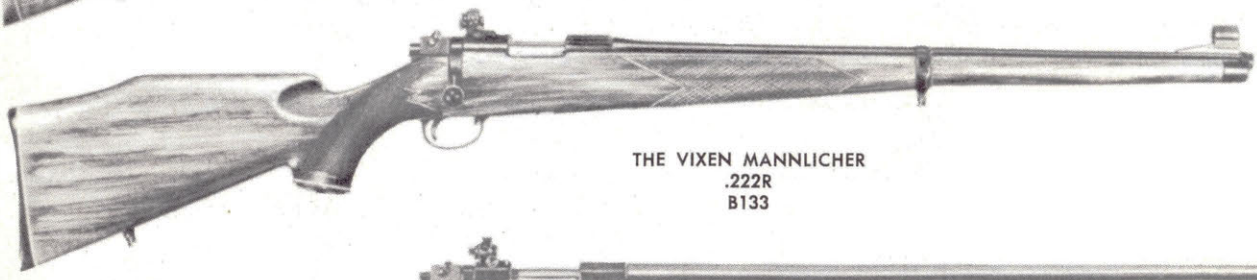
SAKO *Vixen* RIFLES

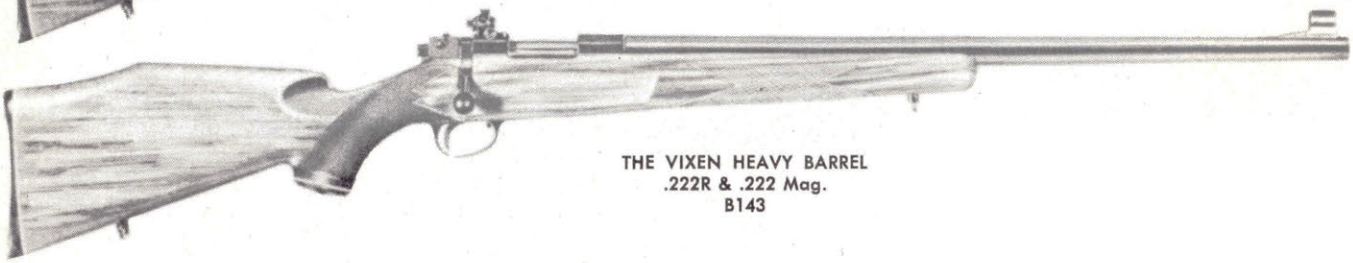
World Renowned Quality for Canadian Sportsmen



THE VIXEN SPORTER
.222R, .222 Mag.
B123



THE VIXEN MANNLICHER
.222R
B133



THE VIXEN HEAVY BARREL
.222R & .222 Mag.
B143

CREATED BY OY SAKO AB, Finland's most progressive and modern arms maker, the Sako Vixen Rifle was developed to meet world-wide demand for the ideal varmint rifle, combining light weight, accuracy and easy handling. Through efficient engineering and expert craftsmanship the demand was met and surpassed. The exceedingly tough action has integral tapered dovetail scope mount blocks, to permit easy and positive mounting of scope and peep sight. The barrel is precision made of fine Bofors steel and the stock is of choice hand checkered French Walnut. Perfect inletting and careful mating of wood and metal help to make this a rifle that meets every requirement of beauty, accuracy and rugged dependability. All Sako rifles are tested for accuracy and perfect functioning. No rifle that fails to meet the test leaves the factory. Available in three type: The Sporter, Mannlicher and Heavy Barrel models.

THE VIXEN SPORTER is a 6½ lb. featherweight. Reports from owners everywhere testify to accuracy unsurpassed by any rifle of its type.

THE VIXEN MANNLICHER, for those shooters who prefer the lines of the full length stock, is well balanced and proportioned for easy handling.

THE VIXEN HEAVY BARREL RIFLE, with high comb target type stock, having beavertail fore-end, is designed for the varmint hunter who wants the extra plus accuracy and better holding possible only in a heavier rifle.

All VIXEN RIFLES are supplied with stocks having the Monte Carlo Cheekpiece at no extra cost.

STOCK DIMENSIONS: SPORTER and MANNLICHER—Length of pull, 13½"; Drop at comb 11/16"; Drop at heel 1⅛"; HEAVY BARREL—Length of pull, 13½"; Drop at comb, 7/16"; Drop at heel, ¾".

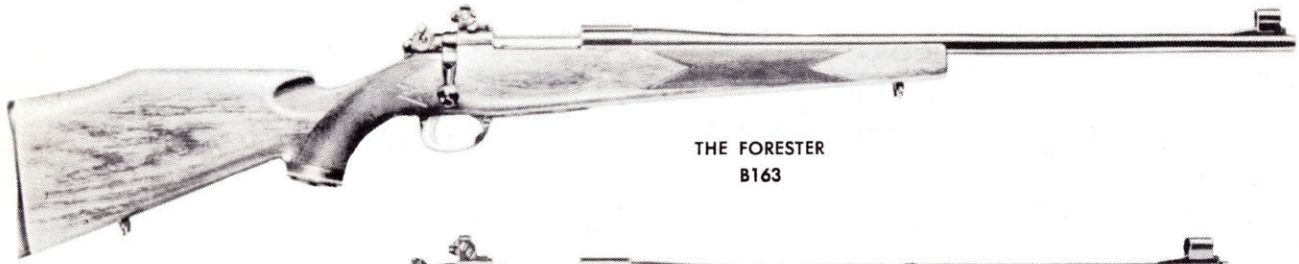
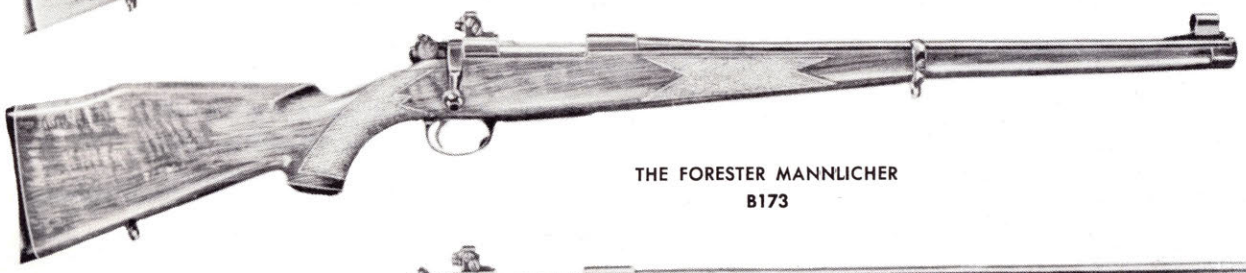
SAKO *Forester* RIFLES



THE FORESTER
B163



THE FORESTER MANNLICHER
B173

THE FORESTER HEAVY BARREL
B183

The above models have the new 1961 modification: i.e., No. 4 adjustable safety trigger and right hand safety as shown on SAKO Magnum Mauser Rifles.

When the short length, high intensity cartridges were developed they had to be handled in actions originally designed for the longer high power cartridges, such as the .30-06 and .270. Special adaptors had to be fitted into the magazines to accommodate these shorter cartridges. The development of a lightweight rifle, using these heavier actions, was almost impossible. Thus, the need became apparent for a shorter action designed to operate efficiently with the intermediate length cartridges. The development of the L-579 action, providing minimum weight with maximum strength, was the first step towards providing a sporting action with a weight and strength ratio best suited for the manufacture of an extra lightweight rifle with the super accuracy required of a varmint rifle and powerful enough for big game hunting. When the Forester rifle came into being it was chambered first for the .243 Winchester cartridge, then, subsequently, in the .244 and .308. It is now available in these three calibers in the LIGHTWEIGHT, the HEAVY BARREL and the MANNLICHER type models.

To build a perfect, all 'round rifle, the medium length L-579 action was combined with—a Bofors steel barrel, highly resistant to wear and corrosion, with 12 land, super smooth rifling—and—a new pattern stock with Monte Carlo cheekpiece and high comb, made of handsomely figured, selected European walnut, beautifully hand checkered and finished.

Other special features in the Forester rifle include: Integral tapered dovetail SCOPE MOUNT BLOCKS, to permit instant removal or replacement of the scope or the optional DUAL-RANGE PEEP SIGHT, without any loss of zero; field tested SAKO ADJUSTABLE TRIGGER which affords target type trigger pull; HINGED FLOOR PLATE with release inside of trigger guard; positive, easy working RIGHT HAND SAFETY which blocks firing pin and locks bolt; square post FRONT SIGHT on hooded ramp.

All Forester rifles are test fired with special high intensity proof loads to assure maximum strength and are then subjected to precision testing to assure top accuracy.

All models are fully covered by NAACO Factory and Warranty Service

SAKO DELUXE *Vixen* AND *Forester* RIFLES

SAKO FORESTER DELUXE RIFLE
B168

In addition to all the features offered on the standard Vixen and Forester rifles the Deluxe rifles have "extras" which have never heretofore been available on a semi-production line gun and which are seldom seen even on the most expensive custom made guns:

- Exceptionally high-grade French walnut stock, selected for beauty and strength.
- Custom skip-a-line checkering, painstakingly executed by hand by master Finnish wood craftsmen.
- Fitted fore-end tip and grip cap of contrasting exotic wood with white line spacers.
- All metal surfaces polished to a high gloss and expertly blued to provide the deepest, most brilliantly lustrous finish.
- Trigger guard and floor plate deeply engraved with a strikingly simple modernistic design, inlaid and finished in the same high gloss as used on all other metal parts.
- Sako's own rubber recoil pad with white line spacer, perfectly fitted for top comfort and appearance.

Even in their standard rifles Sako has given us accuracy, which is supreme and unchallenged. The finish of wood and metal has been lauded by sportsmen and gun experts throughout the country.

In a recent gun magazine, one of the editors remarked:

"I have never observed a quite so nicely polished and blued gun. The grade of wood used on the new L-579 (Forester) is far better than what most shooters are accustomed to seeing. The stock of the Sako incorporates features and styling usually available on super grade guns only. Although the classic lines and minimum weight of the L-579 (Forester) gun may be deceiving, this weapon is, without a doubt, one of the most accurate, best-looking and one of the safest guns to adorn my gun room rack. I have a strong hunch that a real shooter was in on the designing of this new gun. It is delivering benchrest accuracy for me."

These comments were unsolicited and were about the Standard Forester rifle.

VIXEN DELUXE:
Built on the L-469 action and designed especially for the smaller calibers, the Vixen Deluxe is the perfect combination of beauty, accuracy and reliability. Calibers: .222 and .222 Magnum only.

FORESTER DELUXE:
Built on the L-579 action for use with the medium length, high intensity cartridges, this beautiful, powerful, accurate rifle will form the focal point in any collection of fine guns. Calibres .243, .308.

SAKO *Vixen* BARRELED ACTIONS

Barrel actions are for sale to Gunsmiths only

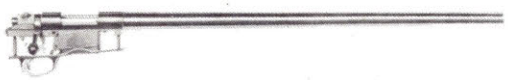
VIXEN LIGHTWEIGHT BARRELED ACTION

B223 .222 & 222 Mag.

VIXEN HEAVY-BARREL BARRELED ACTION

B243F .222 & 222 Mag.

The Sako L-469 Action, with all its fine characteristics, and a barrel of fine Bofors steel are joined to make an assembly completely finished and blued, ready to drop into a stock. The action, noted for rugged strength, precision and compactness, with its integral tapered scope mount blocks, positive right hand safety and fully adjustable trigger, is fitted with a barrel, engineered for long wear and accuracy, carefully bored, rifled and chambered. The assembly is rigidly inspected, gauged and proof tested. A Patridge type blade front sight on a matted ramp with removable hood and the Sako Dual-Range peep sight are installed, making a unit certain to give complete satisfaction when fitted with the stock of your choice. Custom stock makers and users who fit their own stocks are impressed by the ease of inletting made possible by the simple design of the action and the pleasing, clean profile of the barrel.



VIXEN HEAVY-BARREL BARRELED ACTION WITHOUT SIGHTS

B241F .222 & 222 Mag.

The Sako Vixen Mauser Barreled Actions are available in three types: THE SPORTER MODEL, best suited when planning for a light rifle which is accurate and dependable. The light weight barrel is designed to give maximum accuracy with minimum weight.

THE HEAVY BARREL MODEL, for the rifle maker or shooter who wants the extra accuracy possible because of the extra weight. Many match rifles are being made with this model. The straight tapered barrel is sufficiently heavy to effectively dampen vibrations and maintain accuracy.

THE HEAVY BARREL MODEL WITHOUT SIGHTS, for the heavier rifle which will be used with telescopic sights only. Ideal for a benchrest rifle or a super accurate varmint rifle. Supplied with the same heavy, straight tapered barrel as on the Heavy Barrel model.

SAKO *Forester* BARRELED ACTIONS

Barrel actions are for sale to Gunsmiths only

FORESTER BARRELED ACTION

B263

FORESTER HEAVY BARREL BARRELED ACTION

B283

The new Sako L-479 action, designed especially for use with the intermediate length, high intensity cartridges, is fitted with a long wearing, corrosion resistant Bofors steel barrel, made through the latest barrel making processes developed by Sako, resulting in barrels with super smooth rifling to assure top accuracy.

All Sako barreled actions are completely finished, polished and blued, proofed for strength and precision tested for accuracy.

THE FORESTER LIGHTWEIGHT BARRELED ACTION—for a really lightweight high power or varmint rifle with gracefully curved taper, minimum weight barrel.

THE FORESTER HEAVY BARREL BARRELED ACTION—for the high power or varmint rifle, where the shooter wants that extra weight for better holding, with a heavy straight tapered barrel.

FORESTER HEAVY BARREL BARRELED ACTION WITHOUT SIGHTS

B281

THE FORESTER HEAVY BARREL BARRELED ACTION, WITHOUT SIGHTS—for the rifle which is to be used with telescope only. It has the same heavy, straight tapered barrel, ideal for the serious minded, long range shooter, for benchrest work or super accurate varmint hunting.

Sako's method of barrel making is second to none. The proof of their abilities is borne out by the success gained by the users of target rifles, fitted with Sako barrels, in Olympic and other target matches throughout the world.

Sako's method of making barrels precludes the use of imperfect barrels in rifles or barreled actions. As the factory states, "It is very possible to make cheaper barrels, but in doing so it is probable that they will be inferior barrels, many of which must be discarded on inspection. It pays, then, to use the best available processes, materials, machines and labor."

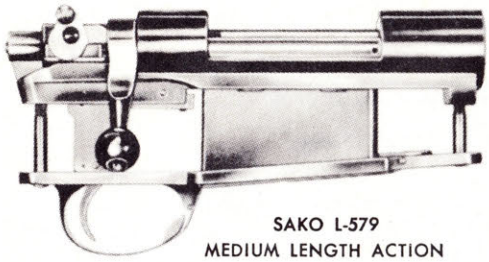
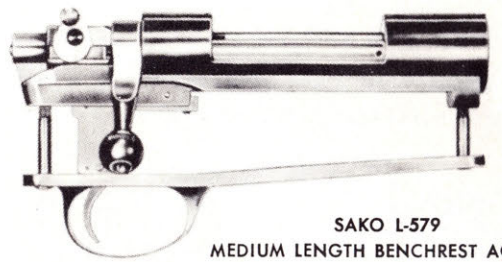
SAKO L-579 ACTIONS



SAKO L-579
MEDIUM LENGTH ACTION
B361



SAKO L-579
MEDIUM LENGTH BENCHREST ACTION
B311

The all new Sako L-579 medium length action, designed primarily for use with the medium length, high intensity cartridges, is the latest, feature loaded addition to the Sako action family.

The L-579 action is a bolt action which cocks on opening stroke. The bolt is equipped with a guide rail to aid in smooth functioning of the bolt. The bolt handle is relieved to accommodate even the lowest mounted scopes. The receiver has classically simple lines. Maximum strength is combined with a minimum of bulk and weight. Such a result could be achieved only through the use of the most modern materials and engineering techniques. The magazine, which is a staggered row Mauser type, holds five rounds and is provided with a hinged floor plate which has a latch located within the trigger guard. The new model actions have #4 adjustable trigger with safety parallel to stock for easy application. Photo shows old style. The firing pin depth can be adjusted at the threaded cocking piece for positive primer ignition through controlled firing pin protrusion. The trigger guard is shaped for easy use, even while wearing gloves. The adjustable trigger is serrated and carefully formed for easy operation. Integral dove-tail scope mount blocks hold scope mounts or peep sight in perfect zero. Most domestic mount makers supply scope mounts to fit the Sako base. Sako split ring mounts are available to accommodate most domestic scopes. High lustre finish assures long lasting beauty, even after reasonable abuse.

SAKO L-469 ACTIONS

SAKO L-469
MAUSER ACTION
B321

FOR
CALIBERS
.222 R, 222 Mag.

SAKO L-469 MAUSER
BENCHREST ACTION
B301

A MINIATURE MAUSER TYPE ACTION, designed for the smaller cartridges, the Sako Short-Action Mauser action has proven itself to be ideally suited as the basic component around which the most accurate varmint rifles are built. The proportions and simple design of the receiver simplify the inletting and fitting of the stock while assuring greater strength, pound for pound, than any other bolt action made commercially today. Integral tapered dove-tail scope mount blocks permit installation of lowest mounted telescopes with available Sako scope mounts. The design of the Sako scope mount is such that the telescope can be exchanged instantly for the Sako Dual-Range peep sight. Both scope mount and peep sight can be mounted and dismounted without tools. The bolt locks on two lugs at the front, while a safety block is formed by the bolt handle collar against a husky abutment at the rear of the action. The bolt handle is relieved to accept low mounted scopes. The safety on the right hand side of the bolt sleeve is a positive, easy working bolt lever, operating in a short arc. An indicator conspicuously signals "off safe" position. The magazine, of a clip type, holds three rounds in a vertical position. It is retained by a positive catch, located in the trigger guard for easy access. The trigger, fully adjustable for weight of pull, backlash and creep, offers the crisp, clean let-off so necessary for accurate, fast shooting. The firing pin, of one piece construction, has a length of fall of only .234" and is retained in the bolt by the cocking piece with an interrupted thread lock.

THE SAKO SINGLE SHOT BENCHREST ACTION differs from the Sako Short-Action Mauser Action in that the receiver is not cut on the underside for magazine loading. The solid bottom receiver offers increased rigidity not otherwise possible without extensive alterations. The pattern of the trigger guard further eases the inletting job. The Sako Single Shot Benchrest Action offers unmatched utility as the ideal action for the benchrest or target rifle. Many single shot varmint and sporting rifles are also being built on this action.

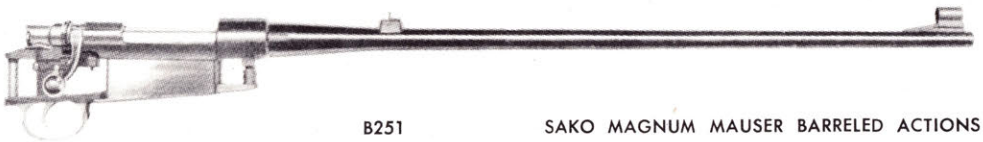
SAKO MAGNUM MAUSER BARRELED ACTIONS



B251 SAKO MAGNUM MAUSER BARRELED ACTIONS
FOR .300 H&H & .375 H&H MAGNUM CARTRIDGES

THE FAMOUS F. N. MAUSER ACTION, MODIFIED FOR THE MAGNUM CARTRIDGES, is fitted with the amazingly accurate Bofors steel barrel by Sako. The 24" barrel is precision bored and rifled and subjected to critical inspection and gauging. The barreled action is equipped with a two-leaf rear sight, Patridge type front sight on a hooded ramp and the Sako trigger, adjustable for weight of pull, creep and backlash. It is then proof tested, polished and blued to make a completely finished assembly, ready to fit into the stock of your choice. The action is drilled and tapped for scope mounts.

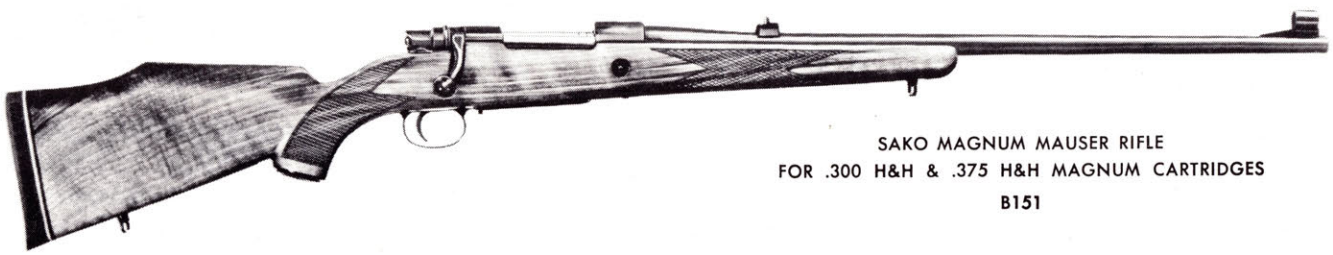
SAKO MAGNUM MAUSER RIFLES



SAKO MAGNUM MAUSER RIFLE
FOR .300 H&H & .375 H&H MAGNUM CARTRIDGES
B151

THE FAMOUS F. N. MAUSER ACTION, used by more gun makers for the building of sporting rifles than any other action, is superbly strong, easy to operate and keep clean, and positive in its function. To this fine action the Sako factory has added their own barrel of the finest Bofors steel, highly resistant to wear and erosion, carefully profiled for optimum weight and pleasing shape, bored and rifled with utmost precision.

THE SAKO TRIGGER, adjustable for creep and backlash, is installed for a clean and crisp pull, so necessary for accurate shooting.

THE SIGHT COMBINATION consists of a two leaf sight with one leaf folding and a Patridge type front sight blade on a matted ramp with removable hood. The action is drilled and tapped for scope mounts.

THE STOCK, of select European walnut, with scope-height comb and Monte Carlo cheekpiece, is well proportioned for comfortable holding and eye appeal. It is fitted with sling swivels, rubber recoil pad and grip cap. It is hand checkered and inletted by expert craftsmen.

The above Models are fully covered by NAACO Factory Warranty and Service.

STOCK DIMENSIONS: Length of pull 13"; Drop at comb 1⅝"; Drop at heel 2½"; Drop at Monte Carlo 1⅜"

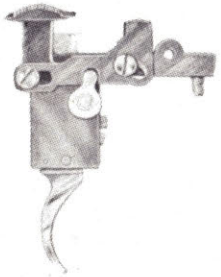
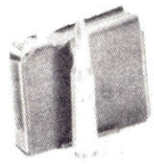
NAACO MISCELLANEOUS PARTS



SAKO #4 ADJUSTABLE SAFETY TRIGGER

All Sako magnum rifles and barreled actions are equipped with the new Sako #4 adjustable safety-trigger at no extra cost. It is also available as an accessory to fit all Mauser actions—with a minimum of alteration to the receiver.



B969

.222 SAKO SPARE MAGAZINE

Holds three rounds in vertical row for easy, jam-proof loading. The magazine is held in the rifle by a positive latch within the trigger guard. Magazines can be interchanged quickly and with a minimum of effort. Many hunters carry their extra ammunition in one or more spare magazines.

B939

SAKO DUAL-RANGE PEEP SIGHT

Exceptionally rugged—built to withstand abuse, the Sako Dual-Range peep sight will hold adjustment under all conditions. A choice of two predetermined range settings can be obtained by a flick of the wrist. Rotating the peep sight one half turn changes the range from approximately 100 to 200 yards. The peep sight disc is knurled and properly marked for positive operation. Opposing screws permit easy adjustment for windage and elevation. Available with an adaptor block for use on Mauser rifles.

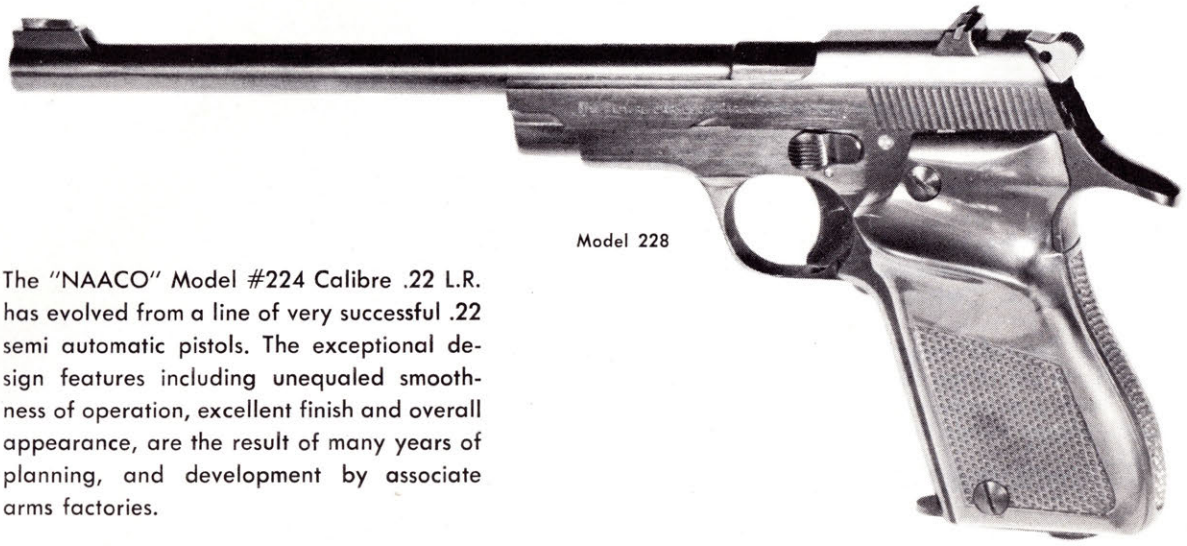
C919

STAR "OFFICIAL POLICE" HANDCUFFS

The most compact and lowest priced handcuff on the market, constructed of the best steel for light weight and rugged strength . . . heavily nickel-plated . . . meets all police requirements. Two keys, pick-resistant locks. Weight about 14 ounces.

The above items carry full NAACO factory Warranty and Service

UNIQUE PISTOLS



Model 228

The "NAACO" Model #224 Calibre .22 L.R. has evolved from a line of very successful .22 semi automatic pistols. The exceptional design features including unequaled smoothness of operation, excellent finish and overall appearance, are the result of many years of planning, and development by associate arms factories.

NAACO

NAACO IMPORTED STAR STARLITE PISTOLS

The light weight and compactness of these pistols were made possible only through the use of the especially developed "Starlite" alloy. The frames of these pistols are machined throughout and should not be compared with castings or mouldings used on some handguns for the sole purpose of lowering production costs. The "Starlite" alloy is used only to lessen the weight of the gun and to make possible the availability of various color combinations. Either of the Starlite pistols makes an ideal presentation piece.

THE STARLET, developed to replace the famous Star Model CO, improved throughout with streamlined frame of "Starlite" alloy, positive safety, unbreakable grips, external hammer. Caliber .25 auto. only.

STARFIRE: The light weight and small size of the Starfire could be achieved only through the use of the "Starlite" alloy to lessen weight and enhance the appearance. Truly a powerhouse in vest pocket size. 7 shots, almost a ton and a half of muzzle energy in less than a half pint package—14½ ounces. Caliber .380 auto. only.

STAR HIGH-POWER PISTOLS

CALIBER .38 SUPER & CALIBER 9mm LUGER PISTOLS: The Star pistols, Model A Super (.38 Super) and Model B Super (9mm Luger), meet the highest standards established by the Star factory, and combine perfect function with rugged endurance. These pistols are built on an especially strong frame to fire the powerful .38 Super cartridge, or the reliable 9mm Parabellum.

An exclusive feature of the Super models is the two second take-down, made possible through the use of a cam and ramp breech lock. Through this system the pistol can be field stripped for cleaning in a matter of seconds. In addition, the same system provides for longer wear-proof operation and increases the inherent accuracy of the pistol. Extra safety features that are provided include: The magazine safety . . . the live round indicator . . . the half-cock notch on the hammer . . . big, Patridge type sights . . . and the crisp trigger pull.

CALIBER .45 ACP PISTOLS feature the same lock breech mechanism as the popular Government Model pistol. While the take-down of the Model P is identical to that of the Browning system, the various internal parts are distinctive in their design for positive function and endurance. Among the features of the Model P pistol are: The full size ⅛" front sight blade . . . wide, square notch rear sight . . . the big, comfortable, checkered composition grips . . . the crisp trigger pull and positive safety for best shooting and safety.

NAACO IMPORTED ASTRA PISTOLS

ASTRA—Unceta y Compania, S.A, of Guernica, Spain, has applied the skills gained and techniques developed in over 50 years of manufacturing experience to produce the world famous line of Astra pistols, unequaled in strength, beauty, precision and safety. Astra's adherence to exacting specifications in design, their use of the best quality of material and uncompromising workmanship make it possible to unconditionally guarantee all Astra pistols against any defect of manufacture or material. Astra pistols are made in a variety of types, sizes, calibers and finishes.

ASTRA CUB, .22 SHORT RIM FIRE: The Astra Cub pistol was developed to fill the demand for a compact, light weight pistol which would use the caliber .22 Short cartridge and which would meet the requirements of safety, reliability, accuracy and low cost. It is the IDEAL SIZE AND WEIGHT for the outdoorsman, fisherman or hunter. IT IS SAFE. The combination of thumb safety, magazine safety and hammer half-cock notch effectively prevents accidental firing of the pistol, even when subjected to considerable abuse. IT IS RELIABLE. Extra care has been given to the design of all critical parts to assure close fitting with minimum tolerances for perfect functioning. IT IS ACCURATE. Even with the 2" barrel and comparatively short sighting radius, the Cub pistol is capable of surprising accuracy.

IT IS LOW IN COST. Although it's one of the best pistols on the market, it is among the least expensive. In addition, the cost of ammunition is less than a penny per round! It is the answer to the plinker's dream. The Astra Cub pistol is second to none in versatility. It is ideal for hunting small game or as a personal defense weapon. The Astra Cub pistol is normally supplied with a lustrous blue finish and unbreakable plastic grips. It is also available in the beautifully hand engraved deluxe model, chrome plated to provide a long lasting, corrosion proof finish.

ASTRA CAMPER, .22 SHORT RIM FIRE. The Astra Camper is identical to the Cub pistol in design, workmanship and quality. It differs only in that the longer 4" barrel provides a longer sighting radius, which is ideal for easier aiming. The overall length of the pistol is still under 6½" and the increase in weight is negligible. The Camper pistol is the perfect alternate where the convenience of the Cub's extra small dimensions can be surrendered for the sake of better accuracy.

ASTRA FIRECAT CALIBER .25, CENTER FIRE. Similiar to the Cub pistol in size and pattern, the Astra Firecat pistol has a concealed hammer and safety features that make it the safest .25 caliber pistol on the market. The 4 safeties of the Firecat are: (1) The thumb safety, which directly blocks the trigger. (2) The magazine safety, which prevents firing of the pistol when the magazine is removed, thus eliminating the possibility of discharging a round inadvertently left in the chamber. (3) The grip safety, which locks the sear in engagement with the hammer, preventing disengagement by the trigger bar. The pistol can be fired only if held in the hand with the grip safety depressed. (4) A live round indicator, which signals the presence of a cartridge in the chamber by means of a protruding pin which is readily visible by day and can be felt with the finger in the dark. The Astra Firecat is normally supplied in a lustrous blue finish, but is also available in the beautifully hand engraved model, chrome plated to provide a long lasting, corrosion proof finish.

Recommendations on cleaning your "Grizzly" Rifles

All Grizzly Rifles are completely oiled and cleaned at the factory after test firing and final inspection, before they are packed in carefully designed shipping cartons.

However, they may be opened at our dealers for display and NAACO recommends the following to insure your Grizzly Rifles will have long life and smooth operation.

First Remove all wrapping materials, checking at this time to make sure all parts such as bolt, sights, etc., are not left in wrapping. Assemble rifle completely and wipe with clean cloth using NAACO Special Gun Cleaning Solvent which will effectively remove all protective oil film applied at factory.

Second Wipe rifle with clean dry cloth.

Third Using clean cloth, go over complete gun using NAACO Special Gun Oil which will leave a very light film of oil over all parts of rifle which now may be placed in gun rack, ready for use at any time.

Fourth If shooting on a very cold day make sure all NAACO oil or grease is removed from rifle indoors, at room temperature before taking or using gun outside. This will assist in giving your gun efficient operation even in cold weather which can congeal oils and grease and cause malfunctions.

"Mallard" Shotgun should be treated in accordance with above care to ensure smooth efficient operation.

NAACO offers Canadian Sportsmen its own complete Gun Cleaning Accessories and recommends you see the complete line at your favorite dealer.

NAACO .22 Calibre Rifle Cleaning Kits — Model #22
NAACO High Power Rifle Cleaning Kits — Model #308
NAACO Shotgun Cleaning Kits .410 to 10 Ga. — Model # 12
NAACO Oil, Grease and Solvent Kits — Model #8

See other catalogue pages for complete specifications.

The above products are fully covered by NAACO factory warranty and service

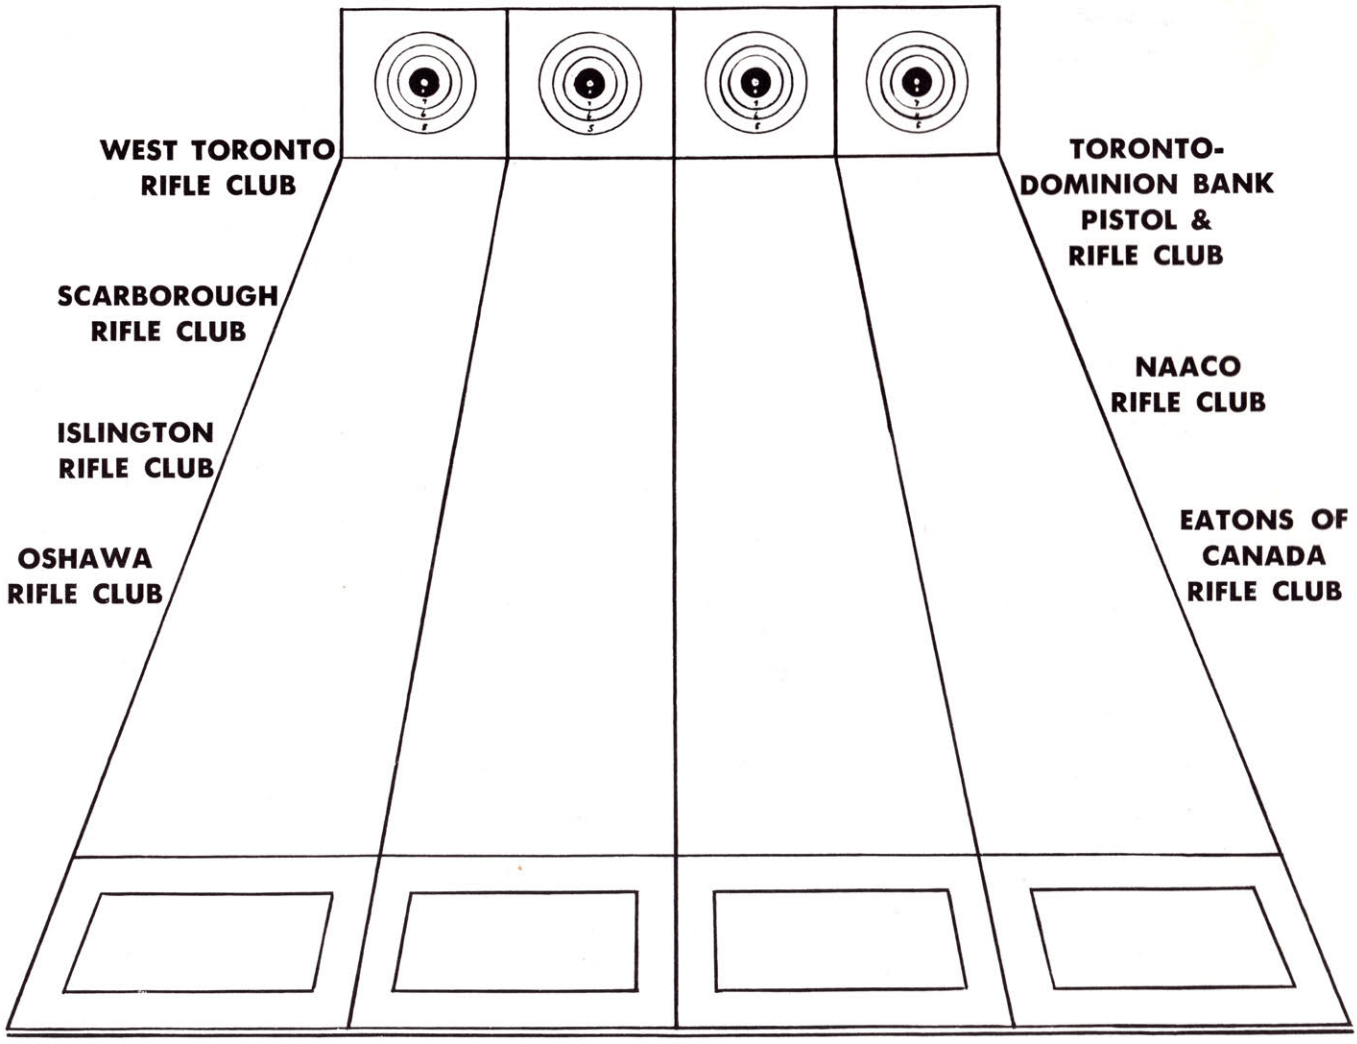
INDOORS with NAACO

NAACO will be "host" to many Rifle and Pistol Clubs who will enjoy our hospitality each evening.



Many Rifle Clubs will enjoy the safety features and modern conveniences at the NAACO Proving and Testing Range where every "Grizzly" Rifle and "Mallard" Shotgun is individually checked, fired, and proofed by our Master Gunsmith before passing final inspection. NAACO made in Canada quality is fast gaining recognition in world export markets and is establishing a new standard of excellence in Sporting Arms. Rigid Safety Rules are followed in the NAACO Target Ranges and young and old, male and female will enjoy one of the fastest growing sports, Indoors with NAACO.

NAACO Outdoor Suggestions

Hunting Clothes

Hunting clothes should be selected on a basis of light weight but embodying maximum warmth. The sleeve length is very important and should be on the long side to permit ease of movement when lifting your rifle or shotgun to firing position. This also applies to sweaters and shirts worn under your Hunting Jacket. Make sure all bulkiness is removed from pockets where your rifle or shotgun stock rests against your body or shoulder area.

It is suggested that your shoes also be examined periodically to make sure the sole has not worn smooth, which will cause you to slip or fall more readily than if sole is in good condition. Extra insoles are always handy and can be exchanged each time worn to keep the feet warm and comfortable.

Miscellaneous

Extra socks and gloves are always handy as well as large handkerchiefs, underwear, first aid kit, sunglasses and extra trousers that fit snug inside your hunting boots.

Hunting Areas

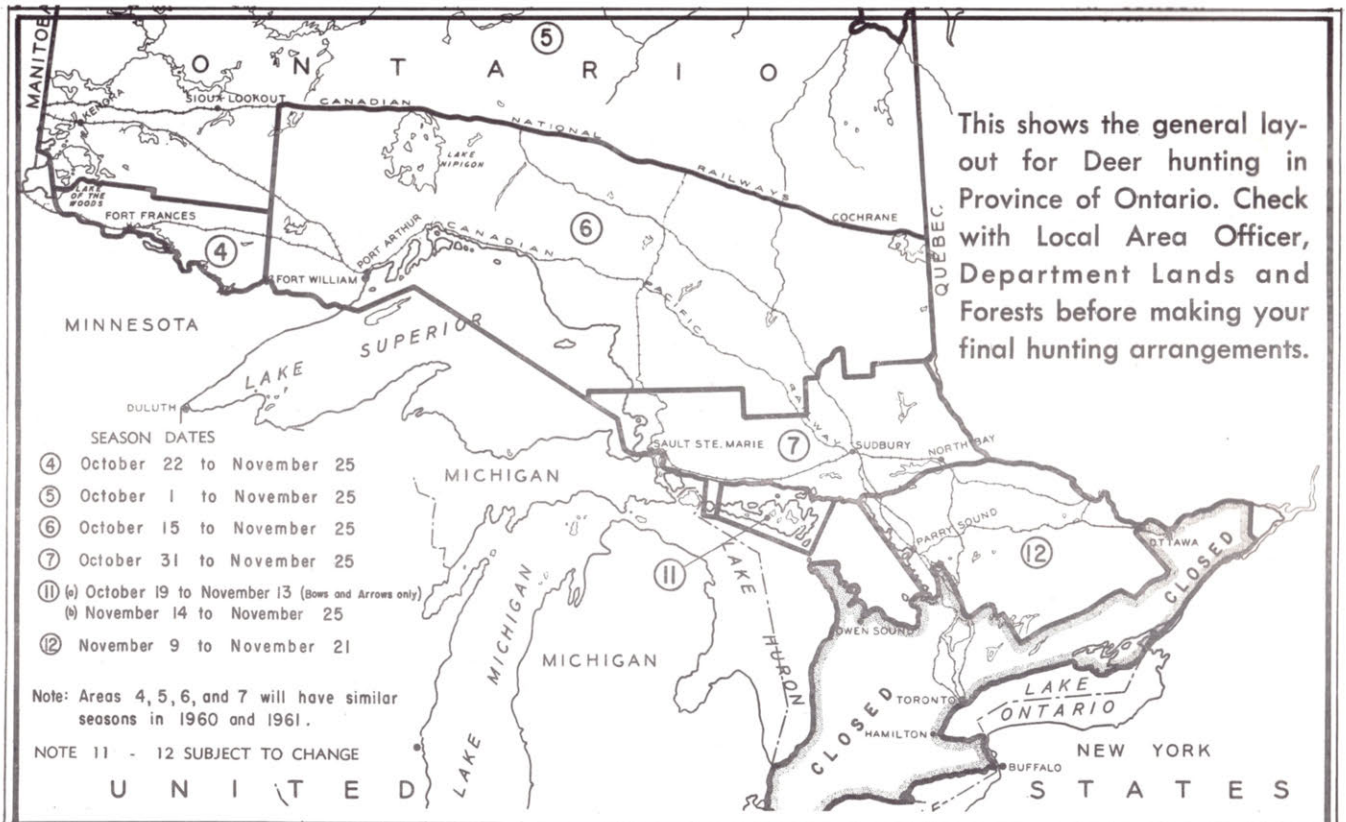
NAACO suggests that if you are not familiar with the specific area that you plan to hunt you contact the local office of Department of Lands and Forests, who can readily brief you on their local district. Also do not leave this important item until the last minute.

Hunting Regulations and Permits

NAACO suggests that a well organized hunt always has an elected Hunt Captain, who can always obtain, well in advance, from the Department of Lands and Forests, specific regulations covering the district you plan to hunt in. Your permit can be renewed or if a new permit is required members of the hunt can be advised in advance how to obtain the new permit.

OUTDOORS with NAACO

DEER and MOOSE HUNTING by AREAS



This shows the general lay-out for Deer hunting in Province of Ontario. Check with Local Area Officer, Department Lands and Forests before making your final hunting arrangements.

"TRADE AND CONSUMERS LETTERS RECEIVED BY NAACO"

NAACO extracts of interest to the Sportsman

19/10/59—NAACO, Just shot a 165 lb. buck with the first two shots from my new "Grizzly". My dad is going to order one for next year. Does it hold 4 or 5 shots? Please send me another set of literature. I lost mine.

L. M., North Bay

23/7/59—Received the Literature on your new .308 Grizzly Rifle. I like the easy method of installing the Scope Mount on the receiver without drilling and tapping. Let's have more of this type of design on the rest of your NAACO Made in Canada Sporting Arms.

A. T., Halifax

6/2/60—Are NAACO selling thru Distributors or direct to Dealers? I have been trying to obtain 3 more of your .22 Calibre Rifles and most Distributors are sold out. Can you advise what Distributor has your Model #10 in stock? Is your pump shotgun in production? Send Literature Direct.

K. R. R., Quebec City

WIRE—20/10/60—Ship Balance of Pump Shotguns at once. New Order #791 — 12 MORE. ADVISE BY Return if not available.

O. L. M., Winnipeg

19/6/59—Glad to hear that your new Sporting Arms Factory is producing a deluxe .308 Cal. Grizzly Rifle. I have an order in for one and look forward to receiving it as soon as possible. When will they become available? *J. H. D., Vancouver*

16/10/60—THANKS FOR PROMPT Shipment on Scope Mounts. Can you supply them in high, medium or low from stock? Advise Collect.

C. R., Montreal

10/1/61—Received your Model #30 .22 Calibre Grizzly Target Rifle with blonde stock for Christmas. Shot a 99 last Saturday. My chums are going to buy some soon.

RUGER®

.44 MAGNUM CARBINE

"Brushbuster"

CANADA'S LOWEST PRICED AUTOMATIC RIFLE

America's lightest semi-automatic rifle. Tubular magazine four shot capacity, or can be loaded single shot quickly - by dropping a shell in the receiver and closing the bolt.

This is a light weight, gas operated carbine designed purposely as a short range, brush cutting, hard hitting big game rifle. The new 240 grain jacket soft nose shell was designed by Remington especially for this gun.

AVAILABLE IN JUNE

$ 122.

The new Remington .44 Magnum cartridge with a 240 grain, jacketed, soft nose bullet.

$154.15

model 70 Standard

Its performance is insured by rigid quality standards — standards that are keynoted by skilled craftsmanship and painstaking attention to detail. No matter if you're a new shooter or a seasoned veteran, just a glance at a Model 70 Standard will show you the difference between **this** rifle and an ordinary firearm. Again your own good judgement should be the test . . . you can buy other rifles for less — you can also spend a great deal more . . . but you **can't buy better!** Available in 243 Winchester, 270 Winchester, 30-06 Springfield calibers with 24" barrels, and in 300 H & H Magnum caliber with 26" barrel.

SPECIFICATIONS

Magazine Capacity: Holds 5 cartridges except 300 H & H which takes 4. Sights: Bead front and folding leaf rear. Receiver: Tapped for most scope mounts and receiver sights. Overall Length: 44-5/8" except 300 H & H which measures 46-5/8". Stock: Monte Carlo with sling swivels; pull — 13-5/8"; drop at comb — 1-5/8"; at heel — 2-5/8"; at Monte Carlo — 1-15/16". Weight: 7 lbs., 15 oz. approximate.

SPECIFICATIONS

Magazine Capacity: Holds 5 cartridges. Sights: Bead front and folding leaf rear. Receiver: Tapped for most scope mounts and receiver sights. Overall Length: 42-5/16". Stock: Monte Carlo with sling swivels; pull — 13-9/16"; drop at comb — 1-11/16", at Monte Carlo — 2-1/16". Weight: 6-3/4 pounds approximate.

In the Model 70 Featherweight, Winchester has successfully combined high standards of accuracy, reliability and power in a sporting rifle with a new dimension of lightness that makes it a pleasure to carry in the field, all day — every day. Weighing approximately 6-3/4 pounds yet delivering the ultimate in hunting accuracy, this popular rifle is chambered for four of the world's outstanding cartridges, the 243 Winchester, 270 Winchester, 308 Winchester and the 30-06 Springfield. With a shorter, lighter 22 inch barrel and its gracefully designed Monte Carlo stock, the Model 70 Featherweight is truly a firearm of distinction. Whether you're tracking a Big Horn in the Rockies or hot on the trail of a record breaking Maine Whitetail, you'll be delighted with the effortless ease with which you'll tote this handsome rifle. And when that big moment comes . . . when you're slowly and surely squeezing off that important shot . . . you can bank on the Model 70's reliability and accuracy to deliver that knockdown punch. Concentrate on your hold and squeeze . . . your Featherweight will do the rest!

model 70 Varmint Rifle

$171.35

Looking for a rifle and cartridge combination that will give you the ultimate in long range, precision shooting? It's yours in the accurate, fast-stepping 220 Swift or 243 Winchester Varmint Rifle. Sporting a heavyweight 26" stainless steel barrel, this rifle is rapidly becoming the nemesis of the varmint population throughout the country. With all the features that have made the Winchester Model 70 the world's outstanding center fire bolt action, the VARMINT is designed for maximum hunting distances with superb accuracy, flat trajectory, low wind-drift and minimum recoil. Whether you're after woodchucks or prairie dogs, crows or coyotes, you'll discover a new thrill in small game shooting when you team up with a Winchester Model 70 VARMINT RIFLE.

300 H & H Magnum, 28" barrel, Bull Gun **$265.40**

Ask any serious big bore target shooter what qualities he demands from his rifle, and he's sure to answer — accuracy and dependability. And that's why you'll find so many of them rely on a Winchester Model 70 TARGET rifle . . . beyond any doubt, the choice of champions. Extra hours of fastidious inspection, hand finishing and meticulous assembly go into every Model 70 TARGET rifle . . . your assurance that here is a rifle that will give you tack-hole accuracy under all competitive conditions . . . limited **only** by the skill of the shooter behind it!

THE *WINCHESTER* FAMILY OF HIGH INTENSITY BELTED MAGNUMS

Winchester's answer for big game hunting the world over . . . from armor-hided African game to fast-bounding Wyoming antelope! These three great rifles, each designed for a specific type of hunting, bring you a smashing combination of high velocity coupled with walloping knock-down power. The Model 70 AFRICAN in 458 Winchester Magnum, for example, with over **two and a half tons** of muzzle energy is fast becoming the favorite of leading African white hunters, who rely on it for instant, one-shot kills on the toughest, most dangerous big game such as elephant and rhino.

A real powerhouse, the Model 70 ALASKAN has proven itself as a sure-stopper on Kodiak, Elk, Moose and Caribou . . . with its powerful 338 Winchester Magnum bullet punching through the thickest brush without deflection. And in Africa, it's built a tremendous record on all but the largest, most dangerous species.

The latest combination in this outstanding series is the Model 70 WESTERNER, chambered for the brand new 264 Winchester Magnum cartridge. This one's just the ticket for long range shots . . . where flat trajectory and high residual energy is a **must,** even at ranges in excess of 500 yards.

model 94

$93.05

Wherever big game and predators are hunted, this world-famous Winchester will be found in the hands or saddle scabbards of men who know rifles. More deer have fallen to this old favorite in the past six decades than to all other rifles combined. Noted for its dependability, light weight and ease in handling, this rugged, fast-operating carbine is popular throughout the West as a saddle gun and in the East as the ideal timber rifle. Guides prefer it because it is light, easy to carry and handle in thick brush. In 30-30 caliber it is the average deer hunter's choice, the ranchman's standby and the most important possession of those who dwell in the earth's remote places. The reliable 32 Winchester Special caliber is the favorite of many others who hunt deer and bear.

NEW!

A Magnificent Automatic Rifle

The *WINCHESTER Model* 100

SYMBOL	CALIBER	BARREL LENGTH
G1003C	308 Winchester	22"

Sleek . . . handsome . . . dependable . . . accurate . . . those are just a few of the words that can be used to describe the brand-new Winchester Model 100 . . . beyond any doubt and by all standards, the very finest automatic sporting rifle ever presented to the North American big game hunter. A direct descendant of the battle-proven M 1 Garand rifle, and the recently adopted M 14 rifle, the magnificent Winchester Model 100 is the proud result of years of experience in both designing and manufacturing the world's finest military firearms.

Everything about this new rifle is right. It's automatic . . . gets off five shots just as fast as you can pull the trigger. It's light . . . just a fraction over seven pounds with fast pointing, perfect balance. It's good looking . . . proudly carried in the field . . . a delight in any gun rack. It's a pleasure to shoot; because it has a minimum of aim-destroying recoil you stay right on target for the sometimes all-important second and succeeding shots. It's dependable . . . with the same type of flawless action relied upon by the U.S. Army and Marine Corps. And best of all . . . you can count on superb game-getting performance — at forty yards in the brush or 'way out there where drop-'em-in-their-tracks accuracy is a must.

No matter what you hunt or where you hunt it, here's a rifle you'll be proud to own . . . a truly great rifle, perfectly suited for any type of North American game from predator to moose.

G7708R	22 Long Rifle Tubular Magazine	22"

model 77 Automatic
22 Long Rifle, clip magazine **$53.15**
22 Long Rifle, tubular magazine **$59.75**

The superbly handsome Model 77 will delight you with its performance and excellent handling qualities. Typically Winchester in design and engineering, these two rifles without doubt give you more for your money in low-priced 22 automatics. Featuring the best of materials and workmanship, both Model 77 rifles are rugged and dependable, with accuracy fully up to Winchester standards.

The model with the detachable clip magazine has an 8 shot capacity, while the tubular magazine model holds 15. Both use a wide range of 22 Long Rifle Cartridges, standard or high velocity. The receivers are totally enclosed except for the small ejection port on the right side. The positive side lever safety is fast to operate and clearly indicates whether on "safe" or "fire"

- SPECIFICATIONS
- Magazine Capacity: Clip — 8; tubular — 15 L.R. cartridges only.
- Sights: Bead front and sporting rear.
- Receiver: Grooved for easy attachment of popular scopes. Bolt "hold open button" on receiver for additional safety and ease of cleaning.
- Overall Length: 40". Barrel Length — 22".

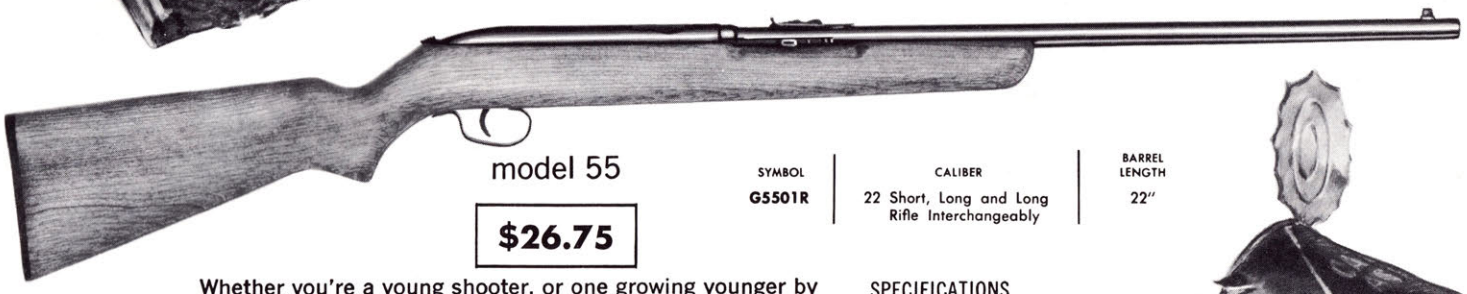
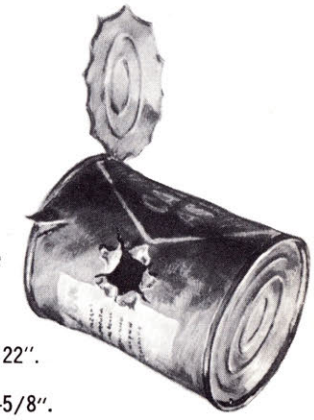
Fast firing fun at single shot price!



model 55

$26.75

SYMBOL	CALIBER	BARREL LENGTH
G5501R	22 Short, Long and Long Rifle Interchangeably	22"



Whether you're a young shooter, or one growing younger by the round, you'll find a lot to like about your Model 55 all through a day's shooting fun. It's a handsome gun to own, typically Winchester in appearance, quality and accuracy.

Operation of the Model 55 is simplicity itself. Once the rifle is cocked and loaded, ejection and recocking are automatic after the first shot is fired . . . all you have to do is push a fresh round through the convenient loading chute, release the safety, aim and squeeze away! The unique, highly-visible safety, which automatically locks the bolt when the rifle is loaded, must be released before the rifle can be fired . . . shows at a glance whether the rifle is on "Safe" or "Fire" position. And since the rifle is loaded from the top — with automatic recocking and automatic bottom ejection — the Model 55 is perfectly suited for either right or left handed shooters — an important factor in junior training programs.

SPECIFICATIONS

Single shot: Short, Long, or Long Rifle
Sights: Bead front and sporting rear.
Receiver: Enclosed; automatic safety easily released with thumb.

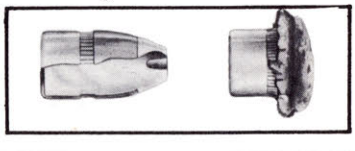
A NEW and MIGHTY *WINCHESTER*
THE MODEL 61 MAGNUM

$84.05

SYMBOL	CALIBER	BARREL LENGTH
G6105R	22 Win. Magnum	24"

chambered for the powerful 22 Winchester Magnum Rim-Fire!

This is the one you've been waiting for . . . Winchester's Model 61 MAGNUM . . . re-engineered for the hottest development in the 22 rim fire field in more than half a century — the low-in-cost, high-in-performance 22 Winchester Magnum Rim Fire cartridge! It's an ideal combination of the fastest of all the slide-actions and new ballistic efficiency . . . a combination that gives you real center fire punch and accuracy with rim fire economy. The 22 Winchester Magnum Rim Fire has enough speed and power to make it an outstanding favorite for controlling pests and varmints everywhere. Besides speed and power, the 22 Winchester Magnum boasts an entirely new concept in 22 bullet design . . . a highly accurate 40 grain, jacketed, hollow point expanding bullet — with upset characteristics matching many a big game load!



MODEL 61
Lightning-like slide action!

Rugged, strong, dependable — that's the Model 61. What's more, the straight line feed, fine balance and jam proof action gives you all of the fine accuracy you deserve. This 22 repeater is a favorite of shooters who really know firearms and do a **lot** of shooting. There's no wasted time — no missed shots — and you can load 20 Short, 16 Long, or 14 Long Rifle cartridges **interchangeably.**

22

WINCHESTER

Time-tested favorite for all young shooters!

A wonderful "first" rifle for the young or beginning shooter . . . with everything you need — safety, accuracy and dependability — and at a moderate price. Take safety, for example. The 67 is **not** ready to fire when the bolt is closed on a cartridge . . . it must be cocked by pulling back the knurled knob at the rear of the bolt. The safety itself, easily visible to both shooter and instructor, positively locks the bolt. This fine Winchester is easy to hold, easy to aim . . . a lot of fun for informal target shooting and plinking. Chrome plated bolt, bolt handle, serrated trigger and safety lock add to its attractive appearance.

SPECIFICATIONS
Single loading directly into chamber; cocked by hand after bolt is closed.
Sights: Bead front and sporting rear.
Overall Length: 42-7/8". Barrel — 27".
Stock Dimensions: Pull — 13-13/16"; drop at comb — 1-5/8"; at heel — 2-9/16".

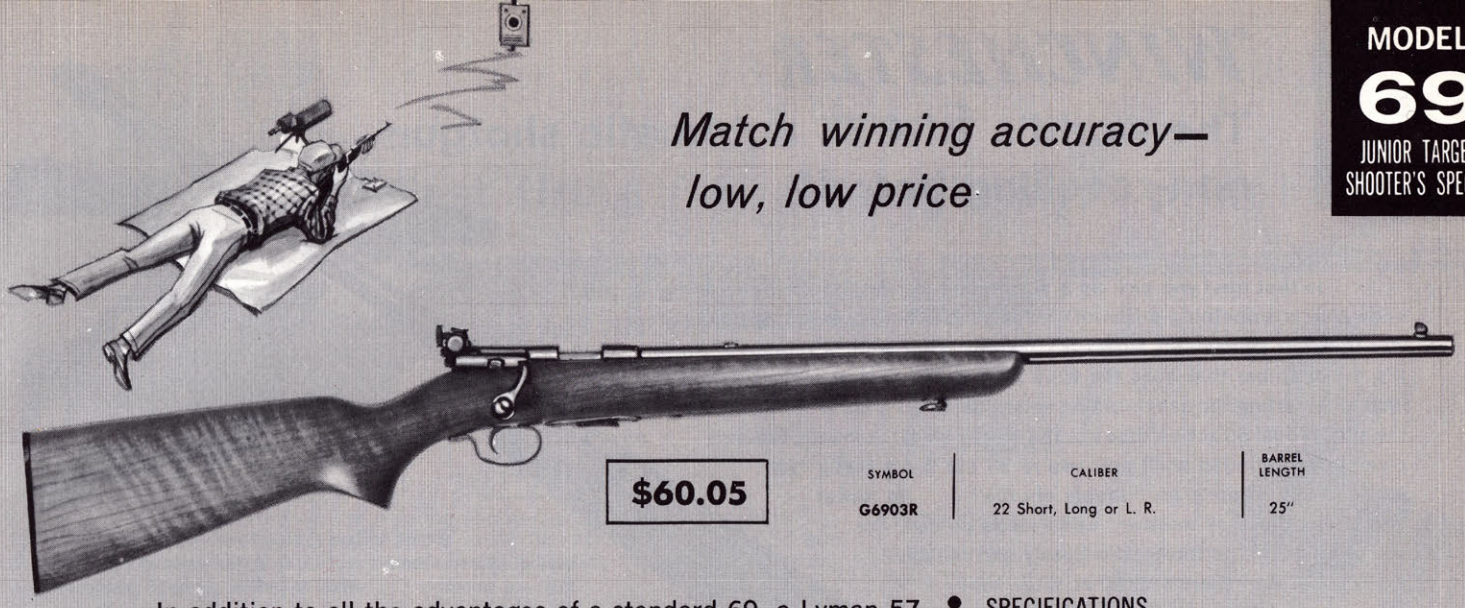
MODEL 69
JUNIOR TARGET SHOOTER'S SPECIAL

Match winning accuracy— low, low price



$60.05

SYMBOL	CALIBER	BARREL LENGTH
G6903R	22 Short, Long or L. R.	25"

In addition to all the advantages of a standard 69, a Lyman 57 rear sight and blade type front sight on the Junior Target Shooter's Special gives you a clearer, finer sight picture, while the addition of a sling to the forearm sling swivel gives you the steadiness that means bullseyes, time and time again. The famous Winchester Speed Lock, cocking on the opening of the bolt, is instantaneous, and trigger mechanism crisp and dependable. The convenient side lever safety positively locks both firing pin and bolt handle. All of Winchester's gunmaking skill is yours shot after shot . . . a rifle the junior shooter can really score with, one with a great reputation for accuracy and reliable performance.

- SPECIFICATIONS
- Magazine Capacity: Holds 5 Short, Long or L.R. cartridges. Sights: Lyman 57 Receiver Sight, Blade Type Front Sight. Stock Fitted with 1-1/4" Forearm Sling Swivel. MODEL
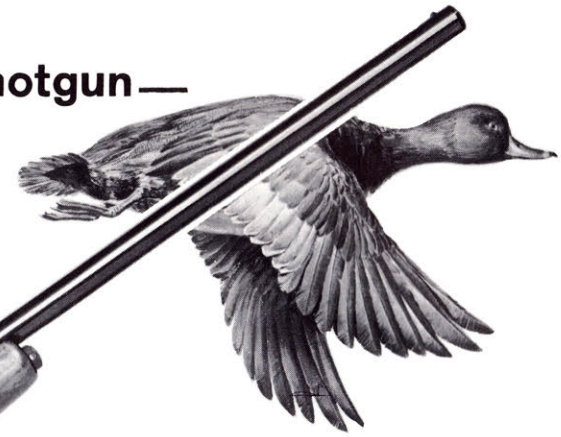
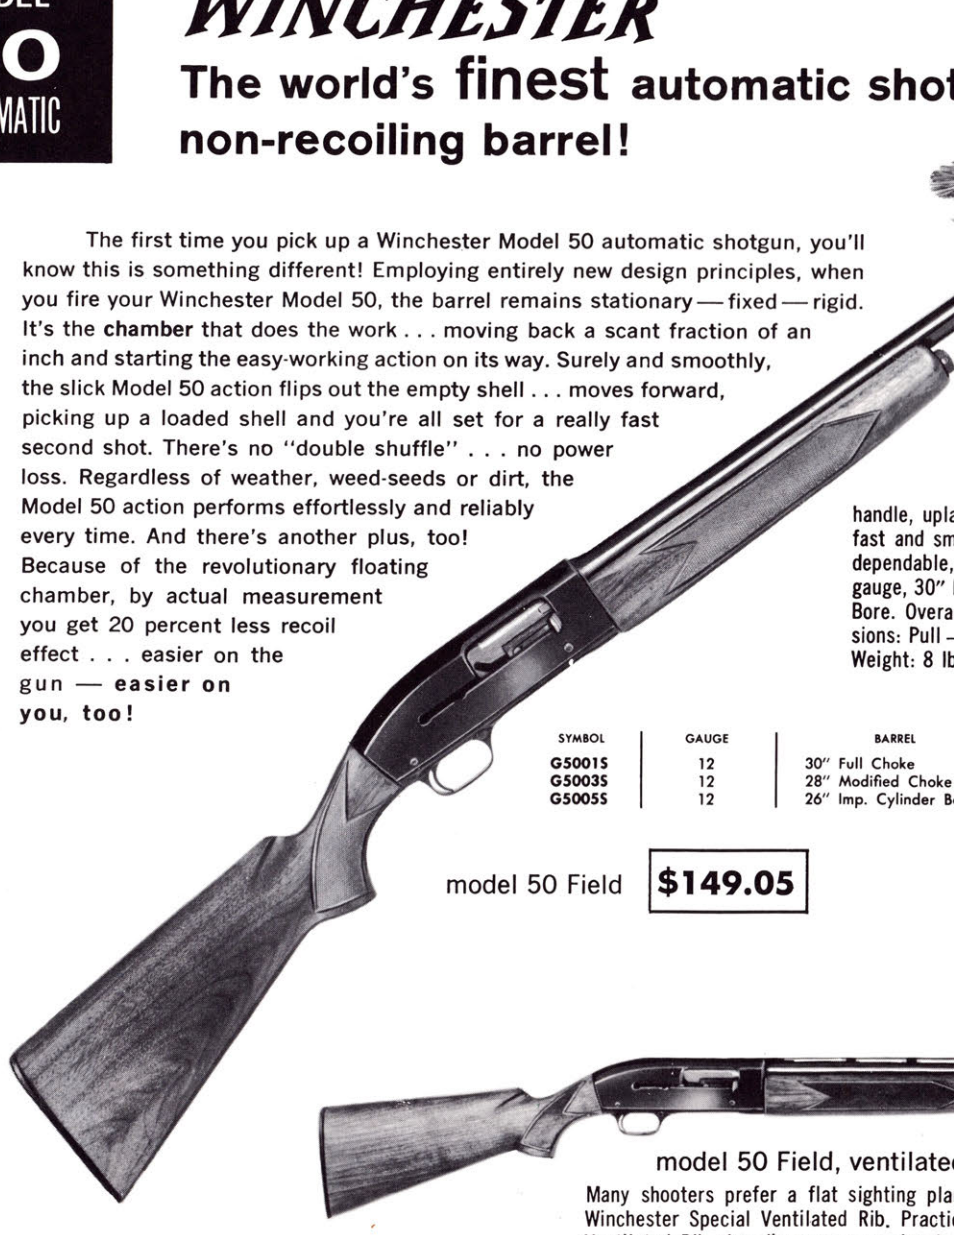
50
AUTOMATIC

WINCHESTER

The world's finest automatic shotgun— non-recoiling barrel!



The first time you pick up a Winchester Model 50 automatic shotgun, you'll know this is something different! Employing entirely new design principles, when you fire your Winchester Model 50, the barrel remains stationary — fixed — rigid. It's the **chamber** that does the work . . . moving back a scant fraction of an inch and starting the easy-working action on its way. Surely and smoothly, the slick Model 50 action flips out the empty shell . . . moves forward, picking up a loaded shell and you're all set for a really fast second shot. There's no "double shuffle" . . . no power loss. Regardless of weather, weed-seeds or dirt, the Model 50 action performs effortlessly and reliably every time. And there's another plus, too! Because of the revolutionary floating chamber, by actual measurement you get 20 percent less recoil effect . . . easier on the gun — **easier on you, too!**



Nicely balanced, easy to carry and comfortable to handle, upland shooters will thrill at the ease of "getting on" fast and smoothly . . . while waterfowl gunners appreciate its dependable, sure fire, hard hitting performance. Barrel: 12 gauge, 30" Full Choke, 28" Modified Choke or 26" Imp. Cylinder Bore. Overall Length: 45-7/16" for 26" barrels. Stock Dimensions: Pull — 14"; drop at comb — 1-9/16"; at heel — 2-3/8". model 50 Featherweight Skeet	G5077SV	12	26" Winchester Skeet Choke

SPECIFICATIONS
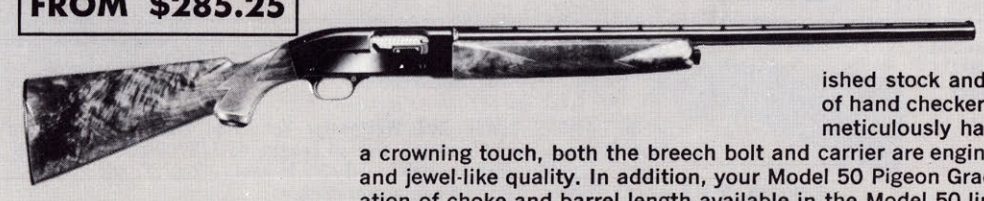
Capacity: Holds 3 shells — one in chamber, two in tubular magazine. Barrel: Winchester Special Ventilated Rib only, 12 gauge, 26" Winchester Skeet Choke. Overall Length: 45-1/2". Stock Dimensions: Pull — 14"; drop at comb — 1-1/2"; at heel — 2-3/8". Weight: 7 lbs., 7 ozs. approximate.

While many skeet shooters prefer a reasonably heavy gun that swings and follows through practically by itself, other clay target fans have been looking in exactly the opposite direction. They want lightness . . . even for all bore events . . . and that's just what you'll find in the Winchester Model 50 FEATHERWEIGHT Skeet Gun. Fast pointing — and with no "double shuffle" to disturb you on doubles . . . the Model 50's exclusive floating chamber assures minimum recoil, less fatigue and higher scores all the way down the line.

Model 50 Pigeon Grade

FROM $285.25



If you're a shooter who takes exceptional pride in his guns . . . if you want something more **luxurious** than standard models, then the Model 50 Pigeon Grade is for you. In either Standard Weight or Featherweight models, a Model 50 Pigeon Grade is truly a prized possession that you'll cherish throughout a lifetime of shooting pleasure. The hand finished stock and forearm are embellished with the finest of hand checkering . . . all working parts are carefully and meticulously hand honed for satin-smooth operation. As a crowning touch, both the breech bolt and carrier are engine turned, providing a finish of rare beauty and jewel-like quality. In addition, your Model 50 Pigeon Grade shotgun can be built with any combination of choke and barrel length available in the Model 50 line, and with stock dimensions to your individual specifications, within manufacturing limits.

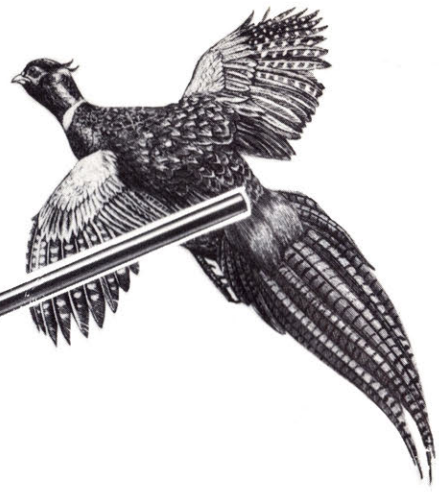
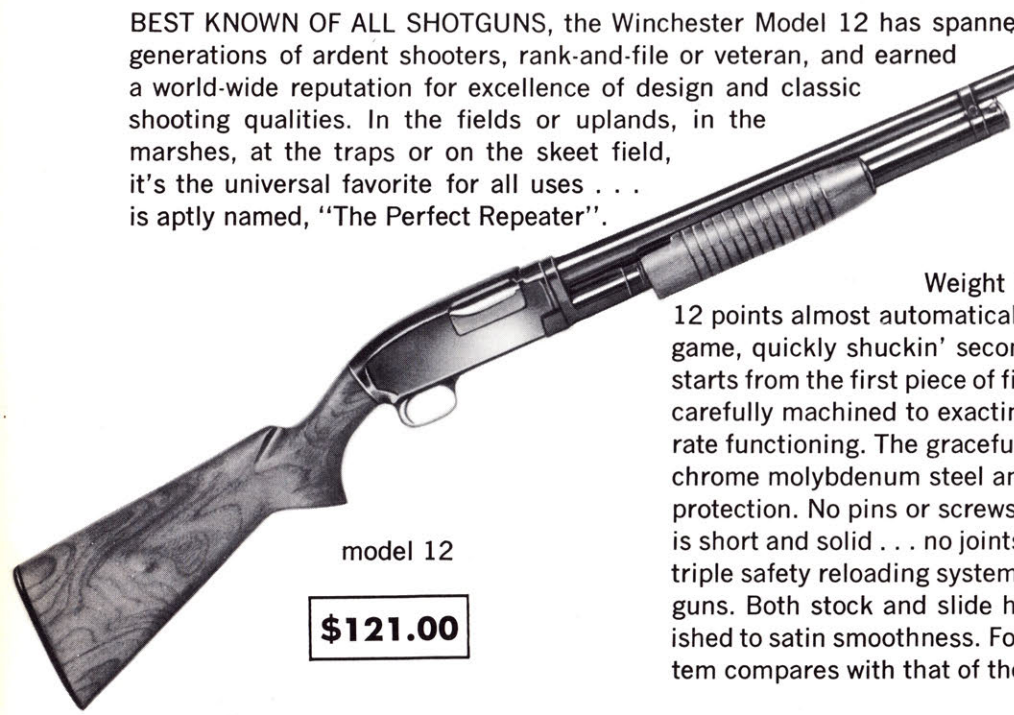
SLIDE ACTION

WINCHESTER

The Perfect Repeater



BEST KNOWN OF ALL SHOTGUNS, the Winchester Model 12 has spanned two generations of ardent shooters, rank-and-file or veteran, and earned a world-wide reputation for excellence of design and classic shooting qualities. In the fields or uplands, in the marshes, at the traps or on the skeet field, it's the universal favorite for all uses . . . is aptly named, "The Perfect Repeater".



model 12

$121.00

Weight is perfectly distributed . . . your Model 12 points almost automatically as you swing into action on fast flying game, quickly shuckin' second and third shots. Its sleek appearance starts from the first piece of fine gun steel that goes into it. Each part is carefully machined to exacting tolerances and rigidly tested for accurate functioning. The graceful receiver is forged from a single block of chrome molybdenum steel and closed at both rear and top for utmost protection. No pins or screws extend through its wall. The breech bolt is short and solid . . . no joints to wear, insuring generations of use. Its triple safety reloading system makes it the safest of all repeating shotguns. Both stock and slide handle are of rich American walnut, finished to satin smoothness. For simplicity and speed, no take-down system compares with that of the Model 12.

SPECIFICATIONS

Capacity: Holds 6 shells — one in chamber, five in tubular magazine. With factory installed removable plug in magazine, gun holds total of 3 shells.

Trap and Skeet guns

More than 50% of all registered trapshooters have chosen the Model 12 as "their shotgun." They know, by experience, they can depend upon long-enduring trouble-free performance — sure-functioning on doubles, and the careful construction that assures dense uniform patterns shot after shot, exactly where the shooter is pointing.

6¾ Pounds LIGHT!

Nicely balanced, comfortable to carry, you'll delight in the handling ease of this smooth operating Model 12 repeater, and come back from a long day afield far less fatigued. It has all the reliability and ruggedness of the standard Model 12, yet with the lightness demanded by so many shooters. All parts are designed in proper relation to each other, resulting in that fine balance, correct feel, grace of line and natural pointing qualities so admired by experienced shooters and so typical of Winchester firearms.

Model 12 Featherweight

$105.25

G1274S	12	28" Full Choke
G1273S	12	28" Modified Choke
G1272S	12	26" Improved Cylinder Bore

10-gauge performance in a 12-gauge gun is responsible for the ever-increasing popularity of this hard-hitting longer range repeater.

The heavier barrel, noted for its dense and uniform patterns, provides added strength, and the resulting forward balance favors the more deliberate style of gun-pointing associated with shooting waterfowl. The stock is slightly shortened to compensate for extra clothing usually worn.

Chambered for 3" Super Speed or Super-X 12-gauge Magnum shells with maximum shot loads, the Model 12 can also be successfully used with any 2¾" shotshell loads. It's unexcelled in reliability and long-range performance . . . the treasured companion of a multitude of American gunners.

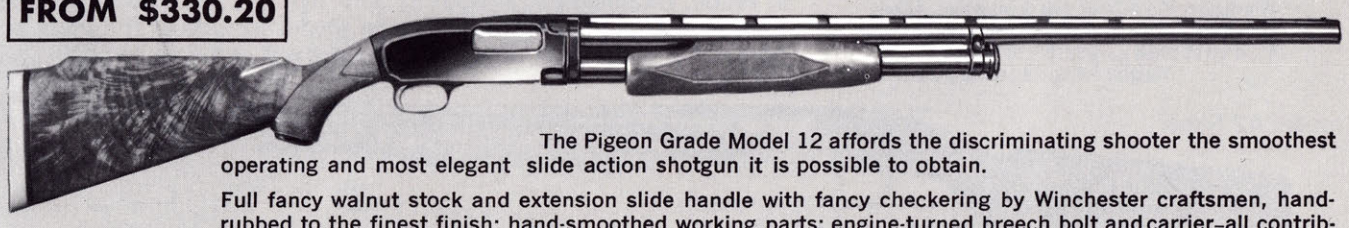
model 12 Pigeon Grade

FROM $330.20



The Pigeon Grade Model 12 affords the discriminating shooter the smoothest operating and most elegant slide action shotgun it is possible to obtain.

Full fancy walnut stock and extension slide handle with fancy checkering by Winchester craftsmen, hand-rubbed to the finest finish; hand-smoothed working parts; engine-turned breech bolt and carrier–all contribute to a superb firearm unrivalled in performance in the field and as a show-piece proudly exhibited to friends and fellow sportsmen.

Model 12 Pigeon Grade guns grace the gun cabinets of some of the world's most famous shooters and are used by many of America's top flight tournament performers at both Trap and Skeet.

Made on special order only in all regular Model 12 styles and gauges, with stock dimensions suited to individual requirements. Available at extra charge are stocks with Monte Carlo, cheekpiece or offset, extra fancy carving and checkering, as well as simple or elaborate engravings.

MODEL **59** AUTOMATIC

WINCHESTER

with the revolutionary Win-Lite barrel!

Here is a most remarkable advance in the history of shotgun design and manufacture . . . the totally new Winchester Model 59 12 gauge, featuring the revolutionary, patented* Win-Lite barrel! Here's an entirely new thrill in shooting pleasure — with the fastest-firing autoloading shotgun on the market, combined with fast-swinging, perfect-pointing lightness that's a pleasure to carry through the toughest days in the field. The heart of the Model 59 lies in the unique Win-Lite barrel — an ingenious bonding of steel and glass fiber . . . finely polished and finished . . . the lightest, strongest shotgun barrel ever made! Ideally balanced by a super-strength, ultra-light aluminum alloy receiver, the Winchester Model 59 has everything you want in a fine shotgun.

Value Packed! Low Priced!

Low in price but loaded with features that make it the most popular of all single shot shotguns, the Winchester Model 37 is an excellent combination of economy and sound, basic design. Used the world over for hunting, clay target shooting and pest and predator control, the Model 37 is an essential part of many a farmer's equipment and often has been a boy's first love.

Extremely rugged, the Model 37 boasts an all-steel frame with a well designed pistol grip stock and hand-filling fore-end. The cocking-piece of the semi-hammerless action is properly located for quick, easy operation . . . must be cocked for each shot — an important safety consideration especially for training novice shooters. The empty shell is ejected automatically when the gun is opened . . . makes it easy for a fast second shot even if your game is in the air or bounding away. Available in 12, 16 and 20 gauge as well as 410 bore, all with full choke, and a variety of barrel lengths.

WINCHESTER *Model 21*

Superb example of the Gunmaker's art!

There are always a fortunate few to whom price is not an object — but to whom pride of ownership is everything. It is to meet the extremely high standards of this select group that Winchester has established the new premier line of the famous Model 21 shotgun. Carrying on the highest traditions of the ancient art of gunmaking, Winchester, with the superlative Model 21, proves once again that American craftsmen, working with American materials, can produce the world's finest firearms.

To assure such a magnificent shotgun as the hand-crafted Model 21, Winchester has assembled a select group of the finest gun makers with instructions to spare neither time nor money, but to keep the goal of absolute leadership before them. There is only one criterion . . . use the best possible method for every one of the thousands of separate steps required. Nothing — neither labor, time nor materials — is spared to produce the world's finest shotgun especially made to your individual measurements and requirements.

New MOSSBERG Targo

22 cal. shotguns with accessories for aerial target shooting

Mossberg for accuracy

NOW—LOW-COST TRAPSHOOTING FOR EVERYONE

Smooth bore adapter

Rifled adapter

$48.55

• MODEL 340TR

Hand trap, included with gun, is easy and fun to use. Target carrier, also included, holds 20 targets, hooks on belt.

22 cal., 7-shot, bolt action TARGO shotgun with smooth bore and rifled adapters, target carrier and hand trap.

• MODEL 320TR

22 cal. Single Shot, bolt action TARGO shotgun. Same accessories as with Model 340TR.

TWO GUNS IN ONE

The TARGO shotgun is actually a "shotgun-rifle," a two-purpose firearm. With it are two, interchangeable adapter tubes, one smooth bored for use with 22 cal. Long Rifle scatter **shot shells.** The other is rifled and converts the gun to a very satisfactory—and accurate—rifle handling 22 cal. Short, Long or Long Rifle **cartridges.** As ballistics experts know, the 3½" rifling at the muzzle will impart sufficient spin to the bullet to hold it true in flight.

MODEL 340TR SPECIFICATIONS:

BARREL:—24" round, tapered, blued steel. Smooth bore with interchangeable smooth bore and rifled adapters.

STOCK:—Genuine American Walnut with pistol grip and Monte Carlo.

SIGHTS:—Open rear sight with "U" notch and adjustments for windage and elevation. Sporting bead-type front. Receiver grooved for scopes.

ACTION:—Hammerless, closed-breech operation, with 7-shot clip magazine for 22 cal. Long Rifle scatter shot shells, also Long Rifle, Long and Short cartridges. Positive, thumb-operated safety.

Weight 6½ lbs. Length over all 43½". Easy take down.

MODEL 320TR SPECIFICATIONS:

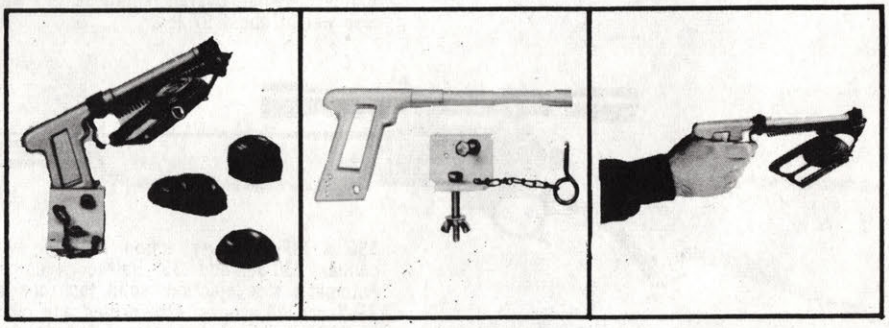
Same as 340TR except is single shot, top loader with walnut finish stock.

ONE-MAN TRAPSHOOTING

Shooter pulls trigger of trap to put target in flight, then points and fires

Trap mechanism weighs only 14 oz. and fits any single barrel, 22 cal., smooth bore or 410 gauge shotgun. Throws target when trap trigger is pulled. Ingenious spring balance construction prevents whip. Adjustment on tempered steel spring enables shooter to vary flight of target from about 40 to 65 feet.

A game with infinite variety. Excellent practice for field shooting. Shoot alone or with friends . . . NRA folder with specifications for Qualification Course and description of awards included with each TARGO gun.



MOSSBERG TARGO SPRING TRAP UNIT MODEL 1A:—At left, complete assembly used as stationary trap. Center, detachable aluminum base with adjustments for elevation to 10°, 30° and 45°. Also cast aluminum pistol-shaped hand frame to which trap mechanism mounts for use as spring hand trap as shown at right. **$16.20**

Prices shown are suggested Canadian retail.

TUBULAR TYPE

The "Cadillac" of .22's at a "Ford" Price

THE FIRST .22 RIFLE WORTHY OF THE NAME ITHACA

A He-Man's .22

BARREL — 22" special blued barrel steel, with Ithaca crafted rifling for pin point shooting. Chambered and rifled for .22 cal. Long Rifle cartridge only.

STOCK — Genuine walnut. Clip type has grooved forend. Tubular type has beavertail shaped forend. Both give perfect balance and smooth handling. Rich luster-sheen finish. Butt plate. Pistol grip.

MAGAZINE — For clip type, 7 shot clip supplied; 12 shot clips available at slight extra cost. For tubular type, tube has 16 shot capacity.

SAFETY — Double Safe Safety . . . locks the trigger and blocks the hammer. The really safe safety. "Safe" and "Fire" positions clearly marked.

BOLT — Similar to famous military bolt; free-working and non-fouling. Simplest and most positive ejector. Non-shuttling charging handle. Handiest and easiest to operate.

SIGHTS — Amazing new Ithaca RAYBAR® Front Sight. Gathers light rays for fantastic hair-splitting aiming ability. Only rifle so equipped. Also — extra black finish Ithaca RAYBAR® Sight furnished with each gun for lighting conditions where you prefer a black sight. Snap in, snap out, whichever you want in a matter of seconds — no tools needed. "V" type sporting rear sight. Receiver grooved for snap-on mount for telescope use.

TAKEDOWN — Most simple. Only one screw to loosen. No special tools needed. When you take this gun down you will find it is the "Cadillac" of small bore rifles at a "Ford" price.

Weight about 6 lbs. Just right for a steady, non-wavering, tack-driving hold. Length over all 40½".

FRANCHI AUTOMATIC SHOTGUNS

Luigi Franchi, designer and manufacturer of the guns that bear his name, is recognized as one of Europe's leading gun-makers.
He takes great pride in the success of this automatic shotguns for they are in use everywhere; the world's lightest - lightning fast and suited for all forms of field, skeet and trap shooting.

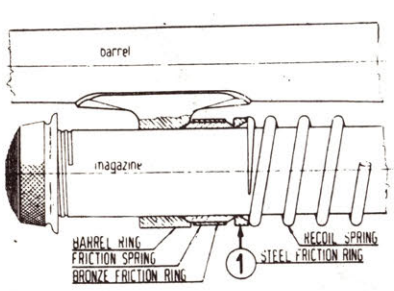
GENERAL INSTRUCTIONS FOR ALL MODELS

TO LOAD THE FRANCHI: Place the gun upside down in a horizontal position, hold it with the left hand, with the butt-end under the right arm. Push bolt release button with the index of your left hand. Lower the carrier by pressing it with the cartridge held between thumb and index finger of your right hand. Push the cartridge into the magazine with the right thumb until you hear the « click » of the shell latch. The shell is now securely locked in the magazine. Repeat this operation with the other shells.
To load the cartridge in the chamber, hold the gun with your left hand, as in firing position, lock the breech-bolt with your right hand acting on the operating-handle and pull it back until it is engaged. With the right hand insert the shell into the opening on the right side of the receiver, letting it fall inside on the carrier. Place your right hand under the receiver then press the bolt release button. The breech-bolt springs forward and pushes the cartridge into the chamber in firing position.

AUTOMATIC CUT-OFF: Unlike other self loading automatics, the Franchi has an automatic cut-off arrangement. It is always in operation and does not have to be set by hand. The automatic cut-off makes possible the quick substitution of the shell in the chamber whenever the shooter finds it necessary to change cartridge while hunting. It acts also as a safety device since the gun will not reload its chamber unless it is fired. In the act of firing the barrel comes back under recoil and unlocks the cut-off.

TO UNLOAD THE FRANCHI: Clear the chamber by pulling back the bolt. Then press the bolt release button and allow bolt to close on empty chamber. Now to empty magazine, turn gun upside down and push bolt release button with left index finger. Depress carrier with right hand index finger and press in the magazine shell latch on left side of receiver. The first shell in magazine will slide into the palm of your hand. Repeat till magazine is empty.

FRICTION RINGS: The Franchi Automatic Shotgun harnesses a portion of the recoil energy to operate the action and, in doing so, it reduces the amount of recoil felt by the shooter. For this reason the friction rings, which are designed to lend resistance to the rearward motion of the barrel and bolt, play a very important role in the operation of the gun.



POSITIONING OF THE RINGS: To avoid firing troubles or malfunctions, it is necessary to have the friction rings placed in the right position.
The bronze friction ring must always be assembled between barrel ring and steel friction ring.
The steel friction ring must be placed between bronze friction ring and recoil spring.
When gun is new or standard or light loads are shot, the steel friction ring must be assembled with inside bevel toward recoil spring (see fig. 1).
When using heavy loads, inside bevel of steel friction ring must be against bronze friction ring (see fig. 2).

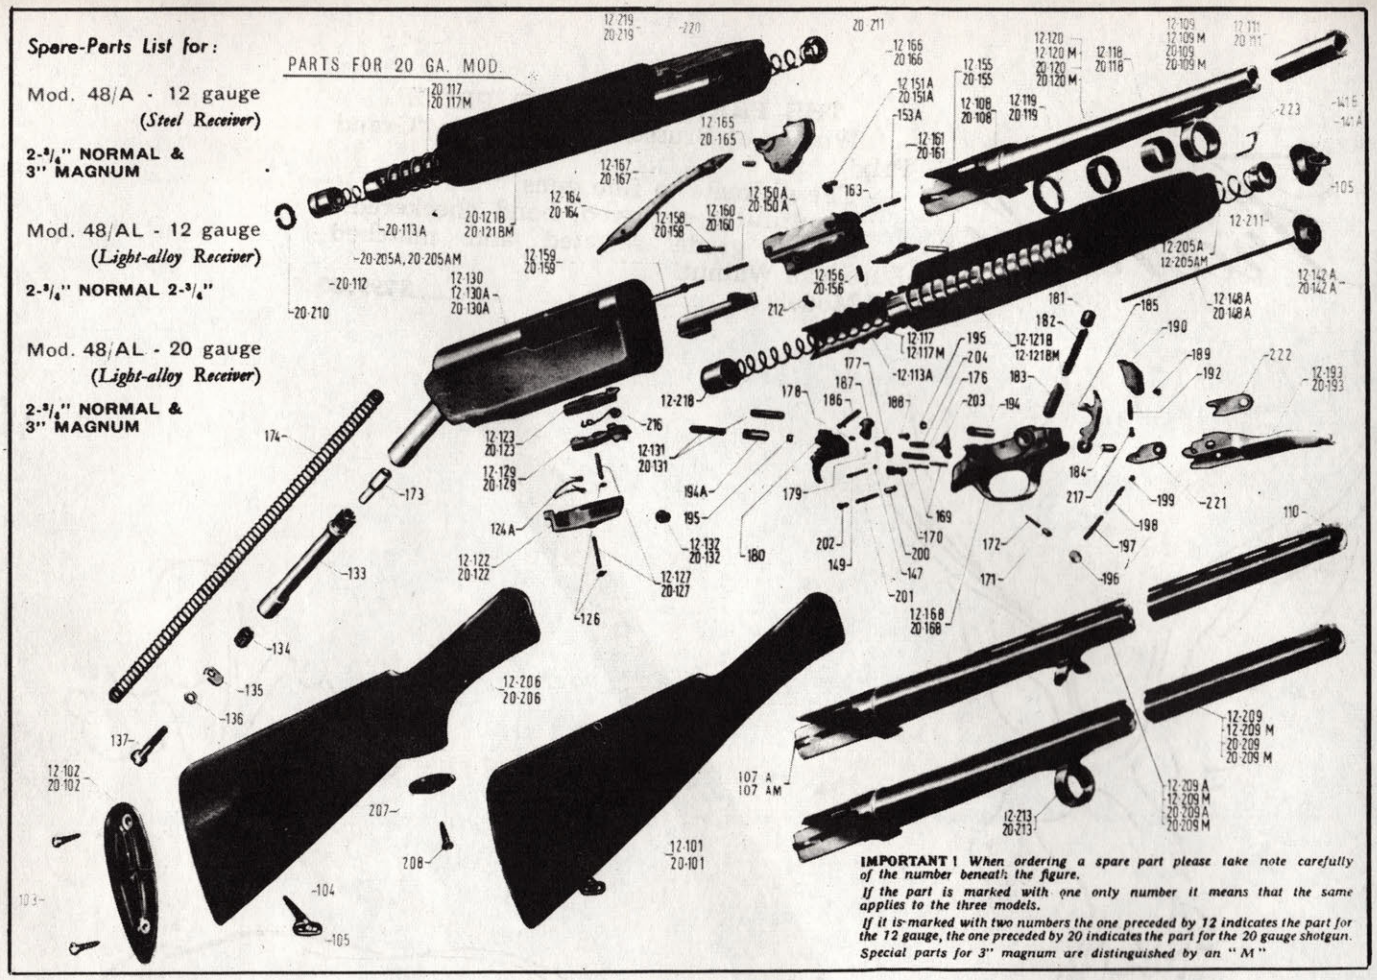
Spare-Parts List for:

Mod. 48/A - 12 gauge
(Steel Receiver)
2-3/4" NORMAL & 3" MAGNUM

Mod. 48/AL - 12 gauge
(Light-alloy Receiver)
2-3/4" NORMAL 2-3/4"

Mod. 48/AL - 20 gauge
(Light-alloy Receiver)
2-3/4" NORMAL & 3" MAGNUM



IMPORTANT ! *When ordering a spare part please take note carefully of the number beneath the figure.*
If the part is marked with one only number it means that the same applies to the three models.
If it is marked with two numbers the one preceded by 12 indicates the part for the 12 gauge, the one preceded by 20 indicates the part for the 20 gauge shotgun.
Special parts for 3" magnum are distinguished by an "M"

SMITH & WESSON
SPRINGFIELD 4, MASS

We have long realized that due to the necessity for shipment to the United States, the occasional adjustments required under our warranty have been a problem in Canada out of all proportion to their rarity. Accordingly we are particularly pleased to announce that Peterborough Guns Limited have agreed to serve as our warranty and parts center within the Dominion.

They are staffed with factory-trained personnel equipped with a complete assortment of current spare parts for immediate warranty service on all Smith & Wesson handguns. Any gun or part thereof in need of attention may be shipped prepaid to Peterborough Guns Limited, Box 205, Peterborough, Ontario, to the attention of their Warranty Department, within one year from date of registered purchase for service in accordance with our Warranty dated April 15, 1955.

We feel that this new service will be of real convenience to our valued Canadian customers, eliminating delay and customs charges on repairs and spare parts.

Naturally the Service Department at the Smith & Wesson factory in Springfield continues to stand ready to assist you on any major work.

Sincerely yours,

SMITH & WESSON, INC.

D. R. Hellstrom,
Export Manager.

Smith & Wesson Handcuffs

1. Designed by Smith & Wesson with quality the first consideration.
2. Light Weight — All Steel 8⅝ oz.
   Aluminum with stainless steel lockwork 3¾ oz.
3. Heat treated internal parts for ruggedness and durability.
4. Welded chain and cheek construction for greater strength.
5. Lock has two safety devices to prevent picking — the key serves the dual purpose of setting the double locks or unlocking both handcuffs.
6. These handcuffs are made for the right and left hand so that both may be clamped DOWN onto the wrists of an offender with both keyholes toward the body and away from the hands.
7. No sharp corners to cut the wrists or cause wear on clothing or case.
8. Nor can they accidentally lock in your pocket, due to the swing-through design of the jaw.
9. Rotating jaw allows cuffs to be pressed smoothly onto the wrists of a prisoner; if necessary they can be speedily clamped on a violent offender.

MODEL 90	Regular Finish BLUE or NICKEL	**$16.50**
MODEL 91	Polished BLUE or NICKEL	**$19.50**
MODEL 926	AIRWEIGHT POLISHED	**$22.00**
MODEL 925	AIRWEIGHT NICKEL	**$25.00**

10. Lock securely in 19 positions, fitting the smallest to the largest wrist.
11. A double locking feature is provided on each cuff. By depressing a plunger on the rim, the jaw is made secure against travel in either direction.
12. Naturally these handcuffs will be furnished in the well-known Smith & Wesson finishes famous for their fine appearance and durability.

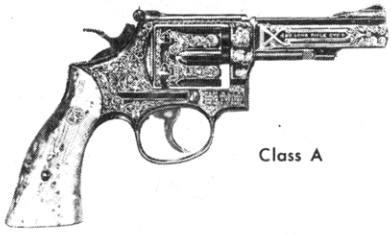
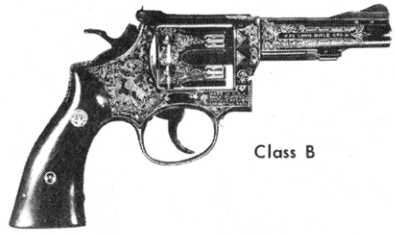
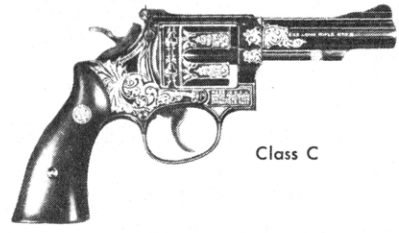
Smith & Wesson Engraving



Class A



Class B



Class C

Produced by our own skilled artisans in three classifications — all hand work with individual patterns and styles. Prices on application to any Smith & Wesson distributor.

STATEMENT OF LIABILITY

These guns are classified as FIREARMS or DANGEROUS WEAPONS and are surrendered by us with the express understanding that we assume no liability for their re-sale or safe handling under local laws and regulations. Smith & Wesson assumes no responsibility for physical injury or property damage resulting from either intentional or accidental discharge, or for the function of any gun subjected to influences beyond their control, and will honor no claims which may result from careless handling, unauthorized adjustments, defective or improper ammunition, corrosion or neglect.

For your protection, examine your gun carefully at the time of purchase, then fill out and mail to us promptly the prepaid registration card bearing your gun's serial number which accompanies all new guns.

WARRANTY

The company will replace or adjust to its commercial standard any gun or part thereof returned prepaid to the factory and found by us to be defective in either material or workmanship. Such service will be made free of charge for one year from date of registered purchase. This warranty and statement of liability supersedes all previous warranties and commitments.

PRESENTS THE NEW

SUPER BLACKHAWK

$149.

Integral ribs on frame protect adjustable rear sight.

.44 Magnum Calibre, 7 1/2" Barrel, Weight 48 ozs., Includes cloth lined Mahogany case.

Wide spur, low contour, hammer cocks with minimum disturbance of grip.

Trigger is full width of guard bow and sharply grooved for perfect control.

Newly designed steel grip frame enlarged and contoured to minimize recoil effect.

A MASTERPIECE OF POWER AND PRECISION

The SUPER BLACKHAWK is the first new RUGER product to come from our new manufacturing facilities. Long a part of our firearms development program, the SUPER BLACKHAWK represents a logical advance in the construction of high-powered single-action revolvers. The shape, size and mechanical design of this magnificent firearm have been perfected with the object of taking full advantage of the power of the .44 Magnum cartridge and the result is a sporting and defensive weapon of capabilities that have never previously been possible in a handgun.

HI-STANDARD .22 OLYMPIC PISTOL

For the first time in 36 years the United States, competing against 35 nations, won a gold medal for pistol accuracy at the Olympic Games. With tensions at the peak, a U. S. Marine Corps Captain calmly shot a tie score with two of his opponents, a Russian and a Finn. In the shoot-off to decide the champion, the U. S. Marine again came through with a 147 (out of 150 possibles on 4-second targets) to win the 33rd Gold Medal of the 1960 Olympics.

brings in 33rd gold medal for U.S. in Rome

The pistol used by the 33rd gold medal winner was Hi-Standard "Olympic". Every "Olympic" . . . **production target models, all** . . . offers the same built-in accuracy, the identical handling ease and dependability. Fitted with gold trigger, gold safety button and lettered in inlaid gold. You select from two barrel lengths: 6¾", 8"

All "Olympics" feature rebounding firing pin, diamond checkered Walnut grips, indexed (click-adjusted) rear sight, undercut front blade sight with serrated ramp. See all Hi-Standard pistols and revolvers at your dealers, or write for illustrated Handgun Catalogs.

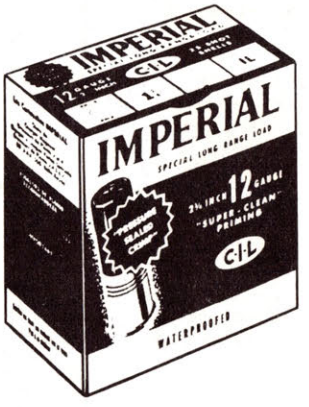
'Imperial' Magnum

You can be sure of more kills, fewer cripples with the 'Imperial' Magnum Load because it has 20% more shot. The denser, more effective pattern gives you smashing power at long ranges; yet these shells are safe to use in any modern gun in good condition and chambered for 2¾ inch shells. The 'Imperial' Magnum features 'Pressure-Sealed Crimp' for uniform patterns, triple-action wads, triple waterproofing, 'Super-Clean' Primers - plus 20% more extra-hard shot. There isn't a better shotshell at any price. Available with BB, 2, 4 or 6 shot in 12 gauge, 2, 4 or 6 shot in 16 and 2 and 4 shot in 20 gauge.

3" Magnum. The most powerful 12 gauge shotshell with a 1⅝ ounce load. Available with BB, 2, 4, 5 or 6 shot.

$4.40 per box



'Imperial' Special Long Range

'The King of Shotshells' for high, fast flying ducks and wary geese. 'Imperial' Shotshells have all it takes to knock them down - speed, long reach, power and punch! Designed for the sportsman who demands the utmost in performance, the 'Imperial' offers all of these outstanding features: 'Pressure-Sealed Crimp'; extra-hard shot; triple-action wads; specially-selected, progressive-burning smokeless powder; reinforced, extra-high brass heads; 'Super-Clean' Primers and triple waterproofing. Available in 12, 16, 20 and 28 gauge (2¾") and 410 (2½" and 3").

$3.95 per box

'Maxum' Long Range

The 'Maxum' brand combines power, long range and dependable performance in an outstanding shell at a medium price. Equal or superior to the premium brands of other manufacturers. Ideal for ducks, geese, small game and pests, this shell really reaches out and gets them. Available in 12 gauge only. 'Pressure-Sealed Crimp' for balanced, hard hitting patterns; reinforced high brass heads; triple-action wads; triple waterproofing and 'Super-Clean' Primers.

$3.75 per box

'Canuck'

Canada's favourite general-purpose shotshell. In a wide variety of gauges, it is ideal for waterfowl, upland game birds, small game and pests. Embodying many of the features ordinarily found in the most expensive shells, the 'Canuck' will give you honest service and dependable performance at lower cost. Available in 10, 12, 16 and 20 gauge, with modern smokeless powder; chilled shot; reinforced heads; triple-action wads; triple waterproofing and 'Super-Clean' Primers.

'Canuck' Heavy Load available only in 12 gauge, gives a harder-hitting shell in the low price field. An exclusive C-I-L Shotshell manufactured for Canadian waterfowl shooting, it compares favourably with long-range shells produced elsewhere.

$3.25 per box

There's a wide range of C-I-L Shotshells

'Imperial' Rifled Slugs

The perfect, short range, big game load for the shotgun owner. Precision-made and finely balanced, it has greater striking energy and many times the accuracy of the old-fashioned, single ball load. 'Imperial' Rifled Slugs can be used in guns up to full choke either in plain barrel or with choke devices. When you are out for upland game, but have both game bird and big game licenses, carry a few in your pocket for the unexpected shot that may give you a trophy. Available in 12, 16, 20 and 410 gauge.

$1.10 per box

Target Loads

C-I-L looks with pride upon Canada's clay target shooters who have brought such world renown to our country in capturing national and international championships. Their achievements testify to the effectiveness of C-I-L Target Loads. Lightning-fast, sure-fire ignition with 'Super-Clean' Primers; power-plus yet minimum recoil with progressive-burning smokeless powder; perfect patterns with perfectly formed shot and no top wad to obstruct the shot column C-I-L Target Loads inspire confidence and provide the exacting quality demanded by top scatter gunners. Available in 12 gauge with 7½ and 8 shot for trapshooting, and in 12, 20, 28 and 410 gauge with 9 shot for skeet shooting.

$2.95 per box

Blank Shotshells

Available in 10 gauge with black powder, and 12 gauge with either black powder or smokeless for signalling, dog training, field trials, etc. Note: blanks are dangerous and should never be fired in the direction of any person.

A complete line of rim fire cartridges for rifles, pistols and revolvers

$1.50 per box

22 BB cap 'Super-Clean'

For 22 calibre single shot rifles, pistols and revolvers.

General information

Gun repairs

Makeshift repairing of guns is a cause of serious accidents. Guns should be overhauled at regular intervals by a competent gunsmith.

Do not install homemade parts.

Do not alter the shape of gun parts.

Do not weld or overhaul any portion of the gun barrel or receiver.

If a new gun does not function properly, it should be returned to the dealer or manufacturer for examination.

Trap and skeet supplies

For information on where to buy Clay Targets, Trap, Skeet and Hand Traps, write to the nearest C-I-L Ammunition Division sales office.

Paper targets

Official competition targets, for use at all recognized ranges with pistols and smallbore rifles, are available from the Canadian Civilian Association of Marksmen, P.O. Box 635, Station B, Montreal. Apply to the C.C.A.M. for information and prices.

Canadian Industries Limited, Ammunition Division, prints three targets for sighting-in rifles and informal shooting.

C-I-L 100 yard Sighting-In Target
C-I-L 25 yard Practice Target
C-I-L Good Luck Target

Dealers may purchase these C-I-L Targets through their distributors or directly from Dominion Marksmen, P.O. Box 10, Montreal.

CAUTION NOTES

Shotshells

1. Do not use long range or heavy load shotshells in guns not specially designed for them. In particular, smokeless powder loads of all classes should not be used in guns having Damascus or other twist steel barrels.

2. Do not use shells in shotguns of a larger gauge than the shells.

3. Do not use shells of greater length than the chamber of the gun. The shotshell length indicated on boxes of C-I-L Shotshells is the full length of the shell when the crimp has been opened out.

4. Shotshells should be stored in a clean, cool, dry place. Extreme heat can reduce the moisture content of the powder and alter its ballistic properties.

5. Steel Balls or Steel Air Rifle Shot should not be hand-loaded into shotshells. They will groove and ruin a shotgun barrel in a few shots.

6. Do not tamper with factory loaded shells.

Rifle cartridges

Do not try to shoot cartridges in a rifle of a different calibre. This is extremely dangerous and may not only seriously damage the rifle, but is liable to injure the shooter. If the calibre is in doubt, see your dealer or a competent gunsmith.

Do not use military cartridges in sporting rifles of any calibre, even cartridges for 303 British or Lee Enfield. Due to storage conditions, many military cartridges may now develop extra heavy pressures; as a result they are not at all suitable or safe for sporting arms. As well, many military bullets are incendiary, explosive, or tracer types; these may be safe to shoot but can cause fires and property damage.

There are numerous 6 mm., 7 mm., 8 mm. and 9 mm. foreign cartridges. Only a few of these are interchangeable with Canadian, British or American cartridges. Do not attempt to use these in weapons which appear to be of the same calibre. The results may be dangerous.

Revolver cartridges

It is extremely dangerous to fire cartridges made for automatic pistols in revolvers to which they are not adapted. Even though some of the cartridges will fit, they are loaded to pressures two and three times greater than ordinary revolver cartridges. For similar reasons do not use any military sub-machine gun cartridges in automatic pistols or revolvers. Many serious accidents have resulted from ignorance of these conditions.

Use 'Dominion' 25-20 Winchester, 32-20 Winchester, 38-40 Winchester and 44-40 Winchester cartridges in rifles only, never in revolvers.

Cartridges not listed in this catalogue

Although C-I-L manufactures a complete range of popular centre fire cartridges, occasional requests are received for cartridges not listed in this catalogue. In Canada there are many rifles and pistols of foreign manufacture; other firearms are becoming obsolete or are new and have not yet gained widespread popularity. The small quantities of cartridges required for these firearms cannot be economically manufactured in Canada but as a service to its customers, C-I-L imports a number of them for resale.

Deliveries cannot be guaranteed because of import regulations and uncertain supplies. For latest information, inquire of a distributor, or write Canadian Industries Limited, Ammunition Division, P.O. Box 10, Montreal, Que.

Free motion pictures

Canadian Industries Limited maintains a well-rounded library of shooting and hunting films available without charge to any responsible group or organization. If you have the use of a projector for 16 mm. sound films, send for the free C-I-L Film Catalogue. Just write Canadian Industries Limited, Motion Picture Section, P.O. Box 10, Montreal, P.Q.

'Dominion Marksmen' program

Shooting is one of the most highly organized sports in Canada with regulating bodies at national, provincial and often municipal levels. At the same time, 'Dominion Marksmen' operates a nation-wide program of competitions without charge. Boy Scouts, civic and service clubs, veterans' organizations, police and fire departments, churches, community recreation departments, gun clubs, conservation groups and agencies – these and many other notable organizations sponsor shooting programs. Nearly all of them are affiliated with 'Dominion Marksmen.'

For communities without rifle programs, 'Dominion Marksmen' conducts an attractive program – what might be called a correspondence course – with free detailed instruction booklets, paper targets, everything needed for safe progression in shooting skill under supervision. 'Dominion Marksmen' also has many helpful publications at little or no cost.

Upon request 'Dominion Marksmen', P.O. Box 10, Montreal, will supply full information on its competitions, booklets, free films, and answers to questions on the shooting sports.

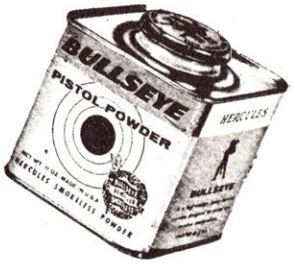
HERCULES POWDER

1. THEY IGNITE READILY WHEN USED WITH ANY MODERN PRIMER.
2. THEY GIVE UNIFORM SHOT - TO - SHOT PERFORMANCE.
3. THEY PRODUCE A MINIMUM OF SMOKE AND MUZZLE BLAST.
4. THEY LEAVE NO RESIDUE OR FOULING IN THE BORE OR BREECH.
5. THEY ARE UNIFORM IN PERFORMANCE FROM LOT TO LOT.



Six types of Hercules smokeless powders are available to handloaders from dealers. These have been selected from the wide range of powders produced for factory loading to provide at least one grade that can be used efficiently and economically for reduced and moderate loads for each type of ammunition.
These include:

		PRICE
BULLSEYE a high-energy, quick-burning powder designed for pistol and revolver ammunition; available in 11-ounce canisters, 3-pound kegs, and 15 pound kegs.	11 Ounces 3 Pounds 15 Pounds	3.50 13.00 54.00
UNIQUE an all-round powder, designed for large caliber pistols and for medium-gauge shot shells. It can also be used for gallery (very light) loads in rifle cartridges; available in 13- ounce canisters, 4- pound kegs, and 15-pound kegs.	13 Ounces 4 Pounds 15 Pounds	3.75 17.50 54.00
HERCULES 2400 a fine-grained powder intended for small capacity rifle cartridges and for reduced loads, or light projectiles in larger capacity rifle cartridges, 410-gauge shot shells, and high - velocity loads in some revolvers; available in 1-pound canisters.	1 Pound	4.25
HiVel No. 2 a larger grained powder designed to burn longer, thus developing desired velocity in military and sililar large-capacity center-fire rifle cartridges; available in 1-pound canisters.	1 Pound	4.25
HERCULES RED DOT the preferred powder for light and standard shot shell loading; available in 8-ounce canisters, 3-pound kegs, and 12-pound kegs.	8 Ounces 3 Pounds 12 Pounds	2.50 13.00 45.00
HERCO a coarser grained shotgun powder for use in heavy loads; available in 4-pound kegs	4 Pounds	17.50

Savage, all new Models 99's and calibers, including 40 and 45, 23A, B, C, 19, 34, 15, 84, 4. (Model 99F, Listed No. 655.)
Springfield and Stevens, 083, 084, 053, 056, 325, 219, 85, 15, 84, Mossberg 151, 140.
Marlin 88C, 89C, 100, 88-DL, 80-DL, 80-C, 56 Levermatic.

SIZE No. .730 (47/64") fits:

Winchester 71, 86, 95, 54, 70, 52 Standard. Remington 721-722. Springfield and Enfield. On Winchester 86 and 71 will fit magazine tube. Savage 340. Weatherby Mag., F. N. Mauser, M-455.

SIZE No. .785 (25/32") fits:

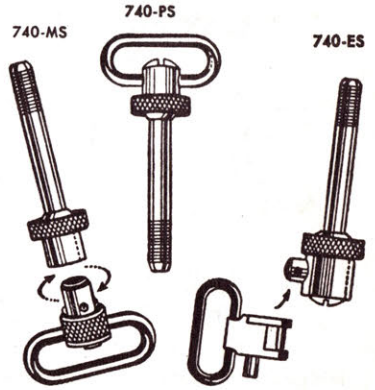
Remington 14 and 141, will fit on slide ring holding magazine tube. Remington Model 721, 300 H. & H. Magnum.

740 REMINGTON GROUP

WITH BARREL STABILIZER

The 740 Auto Loading Rifle requires special fittings with a long forend bolt to replace factory equipment. We have developed outstanding swivel fittings for all types, which incorporate in their design a BARREL STABILIZER which permits a positive return to ZERO, regardless of the number of times the rifle has been disassembled.

740-MS 740-PS 740-ES



740-MS—Fits either Standard or ADL Grade (QD-100 Swivels) ..... $5.75 Set

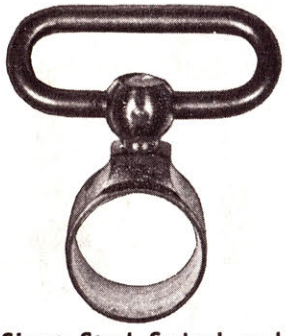
WILLIAMS "On the Range"

Swivels, Magazine Bands, Swivel Installations Accuracy Block

there are more Williams Swivels in use today THAN ANY OTHER!



Short Stud Swivel and Magazine Band

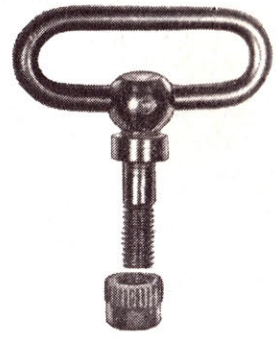
Magazine band complete with special front swivel for 94 Winchester, 336 Marlin magazines and barrels of .650". Short stud swivel for straps of ⅞", 1" and 1¼" can be used in forend caps, magazine rings, etc.

Magazine Band $2.00
Short Stud Swivel ..... .95
Band and Swivel $2.95

BARREL JACKET SWIVEL

Barrel Jacket Swivel shown on 81 Remington (next page) and detached (above). All model 81s and most model 8s drilled and tapped at the factory for this swivel. Made in ⅞", 1" or 1¼" sizes to accommodate straps of ⅞", 1" or 1¼".

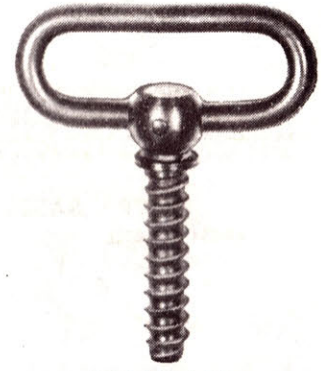
Price ..... .95¢ each



STANDARD FOREARM SWIVEL

Complete with escutcheon; available in ⅞", 1" and 1¼" sizes, and will accommodate ⅞", 1" and 1¼" straps of all types.

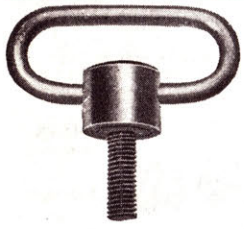
Price ..... .95¢ each



STANDARD STOCK SCREW SWIVEL

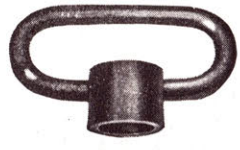
Available in ⅞", 1" and 1¼" sizes, and will accommodate ⅞", 1" and 1¼" straps of all types.

Price ..... .55¢ each



760 Swivel Complete in ⅞", 1" or 1¼" width $3.50

760 Bolt $1.35

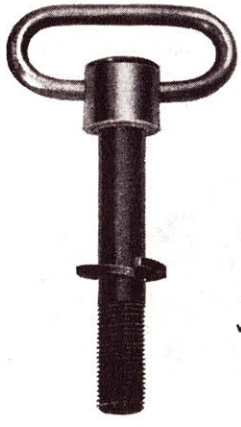


760 Swivel and Sleeve Only in ⅞", 1", or 1¼" $2.15

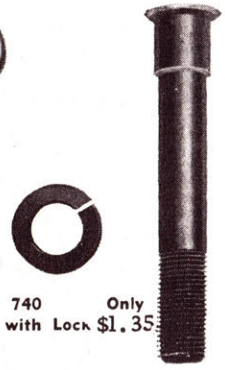
SWIVEL INSTALLATION ON 760 REMINGTON

On the standard grade a smaller bolt is used, and it is necessary to purchase swivel complete with sleeve and bolt. Drill and tap Thread size 10-32. Drill #21.

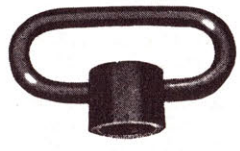
The 760 swivel bolt, having standard 10-32 thread, isn't interchangeable with the ADL bolt — —this isn't important as on the ADL you simply use Williams swivel and sleeve. Remington's thread size is not used because they choose to use a "mongrel" size, and it would be practically impossible to obtain a tap unless on special order and at considerable extra expense.



740 Swivel Complete in ⅞", 1", or 1¼" width. $3.50



740 Only with Lock $1.35



740 Swivel and Sleeve Only in ⅞", 1", or 1¼" width, $2.15

NOTE: Remington changed the forend bolt assembly at serial number of approximately 159058. They are now using a double threaded bolt. For installation of the Williams swivel, remove forend bolt, drive out the forend bolt sleeve, insert the accuracy block, then the swivel.

Use model "S" for rifles with serial numbers below 159058. Model "L" for all new rifles.

SWIVEL INSTALLATION ON THE 740 REMINGTON

In the case of the 740, it is only necessary to replace the fore-end screw with the Williams swivel, which is furnished with a bolt with proper thread size to interchange with the screw that Remington normally supplies. With the standard grade 740, the swivel is supplied with the large bolt and lock nut. On the ADL models, as the rifle comes from the factory with the swivel already attached, about the only real need to change the swivel would be if you want to use a strap of different width than that which the factory supplies. Normally, the factory swivels come through for a 1" strap. The Williams swivel for the 740 is so made that the swivel and sleeve can be sold separately from the bolt, and this swivel and sleeve can replace that which is furnished by Remington.

WILLIAMS ACCURACY BLOCK FOR THE 740

When the barrel of the 740 heats up, or the forearm screw is tightened or loosened you will shoot an erratic group. The accuracy block, inserted between the forearm and stud, brings the muzzle to perfect alignment and stabilizes the point of impact.

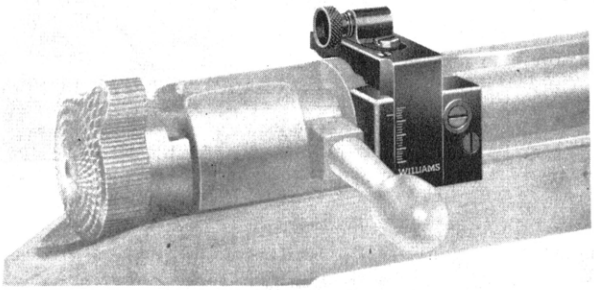
5D SIGHTS FOR BIG GAME RIFLES – SHOTGUNS – .22s

5D-JEMS
for the Jap, Enfield, Mauser, Springfield

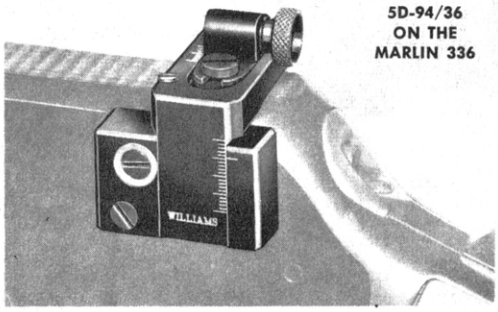


5D JEMS ON THE JAP

THE COMPANION SIGHTS TO THE FOOLPROOF

Now available for some of the more popular big game rifles — the inexpensive, quality made 5D sight. These sights are patterned after the Foolproof. They have the same strength, light weight, and neat apperance; but without the micrometer adjustments. Designed for rugged hunting use, the 5D sights are dependable and accurate. Positive locks. Clear unobstructed vision. No knobs or side plates to blot out shooter's field of vision.

5D-94/36
ON THE
MARLIN 336



AN INEXPENSIVE QUALITY SIGHT

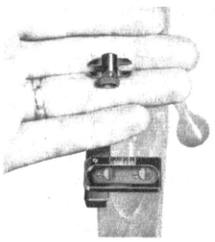
Wherever possible, the manufacturers' mounting screw holes in the receivers of the guns have been utilized for easy installation. The upper staff of the Williams 5-dollar sight is readily detachable. It is only necessary to loosen one screw so that the upper staff slides easily in the close-fitting dovetail. The angular bushing locks this upper staff in a positive manner.

A set screw is provided as a stop screw so that the sight will return to absolute zero upon detaching and reattaching.

The material used in the manufacture of the Williams 5-dollar sight is one of the highest grade alloys obtainable. There has been no sacrifice of quality as we are using one of the most expensive, highest tensile strength alloys that money can buy. Laboratory tests show that the material used has a tensile strength approximately twenty-five per cent greater than mild steels.

This high-grade alloy is finished with an anodize in a deep blue-black that adds even further to the strength of the sight by creating an extra hard surface.

5D - 94/36
for the 94, 64, etc., Winchesters and 36-336 Marlin lever actions



Note two positions for aperture holder to give double the amount of windage.

Standard thread sizes, the same as used on the Foolproof, permit the use of a wide range of apertures for all sighting conditions.

THE FINEST INEXPENSIVE RECEIVER SIGHTS MADE

5D-12*	Winchester 12-25, Remington 11-'48, Spt's-'48, 870 and 31 models, Stevens 620.
5D-22-410	For the .22-410 over and under Savage or Stevens:
5D-37*	Ithaca 37.
5D-39A	Marlin 39A lever action. No drilling or tapping necessary. Non-extension model.
5D-43	For the 43 Winchester bolt action varmint rifle.
5D-46M	Mossberg 46, 26, 42, 44, 50, 51, 151 (factory drilled and tapped).
5D-55	For the 55 Winchester single shot.
5D-56	For Marlin Levermatic and 88, and 100 Winchester.
5D-61	Winchester 61 slide action .22
5D-63	Winchester 63 and 03 auto.
5D-66	For the Remington Nylon 66.
5D-70	For 70 and 54 Winchesters and 721, 722, and 725 Remingtons.
5D-74	Winchester Model 74 .22 auto.
5D-75	Winchester 75, 72 and 69 (some factory drilled and tapped).
5D-77	For the Winchester 77, .22 auto.
5D-81	Marlin 80, 81, and A1 rifles (factory drilled and tapped).
5D-87	For the Stevens-Savage .22 autos models 87 and 6 and other Stevens-Savage bolt action and autoloading rifles having 10-32 mounting screws.
5D-94/36	For 94, 64, etc., Winchesters and 36-336 Marlin lever actions.
5D-97*	Winchester 97 (not extension models)
5D-121	For the 121 and Model 12 Remington slide action .22s.
5D-241	Remington 241-24 Autos Browning 22 Autos.
5D-510	Remington 510, 511, 512 and 513 (some factory drilled and tapped).
5D-550	Remington 550 auto (it will also fit some of the Stevens-Savage .22s that are not drilled and tapped).
5D-572	For Remington 572 .22 slide action.
5D-620	For the Mossberg, 620Ks, 640Ks, 340s, 342s, 346s, 350s, 351s, 352s (check the 300 series).
5D-760N—740	For the Remington 760 with serial numbers above 154,965 and 740s above serial number 64,046.
5D-BDA*	For Browning Double Auto Shotgun.
5D-CR	For the Crosman air rifles.
5D-JEMS	For Jap, Enfield, Mauser and Springfield.
5D-Krag	For American Krag.
5D-MBA	Fits Mossberg bolt action shotguns — 185DC, 185K, 190, 85B, 85D, 185D.
5D-N. Krag	For Norwegian Krag.
5D-03-A3	For the 1903-A3 Springfield.
5D-SH	For Sheridan Model "C."
5D-SMLE	For British Short Magazine Lee Enfield.
5D-SSM*	Square stern models of Remington, Browning & Savage auto shotguns.
5D-X5	For the Ithaca Lightning 22 auto.

*** Special shotgun aperture supplied unless otherwise indicated.**

3/8" OD Aperture with 093 inner hole furnished unless otherwise specified.

Some of the Higgins guns are made by Marlin. Usually if the model number 103 is on a Higgins gun—then it's made by Marlin. Consequently, some of the sights we have designed for Marlin will fit a few models of the Higgins.

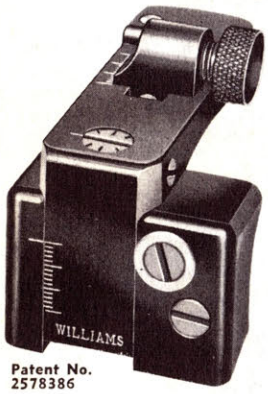
WILLIAMS
"On the Range"

WILLIAMS
RECEIVER SIGHTS

NO KNOBS
NO POSTS
NO SIDE PLATES
NOTHING TO 'BLOT OUT' SHOOTERS FIELD OF VIEW

OUTSELLS ALL OTHER MAKES AND MODELS OF HUNTING SIGHTS PUT TOGETHER

THE FOOLPROOF — THE FINEST RECEIVER SIGHT MADE



Patent No. 2578386

One of the reasons the Foolproof is so popular is that it is free from knobs and other obstructions that impair and blot-out much of the shooter's field of vision.

Internal micrometer adjustments have positive internal locks—there is nothing—no exterior knobs or posts—that could be accidentally jarred or moved to throw the sight out of adjustment.

The Foolproof is strong, rugged, dependable. The alloy used to manufacture this sight has a tensile strength of 85,000 lbs. Yet the Foolproof is light and compact, weighing only 1½ ounces.

For big game hunting, the Foolproof will outsell all other makes and models of receiver sights put together.

Most rifles are now being drilled and tapped at the factory for installation of the Foolproof.

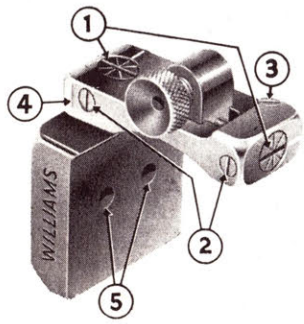
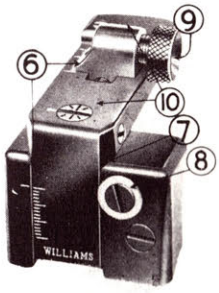
FP SSM	for square sterned auto shotguns.*

HERE ARE SOME OF THE REASONS WHY THE FOOLPROOF IS THE MOST POPULAR HUNTING SIGHT



1. Internal micrometer adjustments for elevation and windage.
2. Positive lock for elevation and windage.
3. Rigidly supported at outer end by steel set screw.
4. Upper bracket is one solid milled piece.
5. Manufacturers' mounting screw holes used wherever possible.
6. Windage and elevation markings are calibrated.
7. Dovetailed base for maximum rigidity and neat appearance.
8. Dovetailed angular locking bushing eliminates unsightly side plates.



* Supplied with special large shotgun aperture unless otherwise indicated.

The new line of Canadian made Gun Cleaning Equipment featuring the new gun cleaning kits, the new rust preventive gun oil and solvent with the new Chieftain recoil absorbers and the ultimate in Duck and Goose calls.

BUY CANADIAN

The Finest for Modern Gun Maintenance

STAG LUBRICANT COMPANY LIMITED

ROCKWOOD - ONTARIO

"THE FINEST FOR MODERN GUN MAINTENANCE"

Stag Frigidized Gun Oil

No. 301

IMPROVED

A new additive that eliminates rust for months, even gives salt spray protection, has been included with the Frigidized Gun Oil to make it the finest in the country — guaranteed not to freeze actions of firearms at temperatures to minus 50 degrees. It is non-gumming and non-drying. Suggested for use in all moving parts of firearms, fishing reels and machinery. The perfect one coating storage protection.

Packed 1 dozen in display carton.
Weight 3¼ lbs.

Suggested List .40 ea.

Stag Nitro Powder Solvent

No. 302

IMPROVED

A new additive that increases rust protection nearly 100%, plus the bonus of increased lubricity. This solvent cleans and protects the barrels and actions of all rifles, shotguns, pistols, revolvers and automatics. The Stag Solvent removes leading, copper fouling and other residue quickly and efficiently —Harmless to bluing.

Packed 1 dozen in display carton.
Weight 3¼ lbs.

Suggested List .55 ea.

Stag Gun Blue

No. 303

The newest in **"Instant Gun Blues"** — Produces a rich, durable lustrous blue-black finish on iron and steel, quickly and easily. Will not injure steel or cause dimensional change. No skill or experience necessary, just follow simple directions on package.

Packed 1 dozen in display carton.
Weight 3¼ lbs.

Suggested List 1.25 ea.

Stag Pre Blue

No. 304

A useful, general purpose product designed primarily for firearms, but excellent for general household use. Pre Blue removes blueing, rust and corrosion from barrels and actions of firearms. Offers perfect bond for **Stag Gun Blue.** Effective upon iron, steel, chrome, copper together with all lubricants.

Packed 1 dozen in display carton.
Weight 3¼ lbs.

Suggested List .50 ea.

Stag Stock Finish

No. 305

This fast drying, grain revealing Super Lin Dry Gun Stock Finish produces a real oil finish of great durability. The highly refined penetrating oil dries completely with rapidity for a tough finish. Super Lin Dry is also an excellent finish for any wood that has original finish removed.

Super Lin Dry contains no resins, rosin lead, wax or silica, it is not edible.

Packed 1 dozen in display carton.

Weight 3¼ lbs.

Suggested List .75 ea.

Stag Cleaning Patches

No. 311

One box of patches to do all calibres. A continuous roll type of patch. Carton marked to specify lengths. Easy to cut any size for any calibre. Made of good quality flannelette - excellent for cleaning.

Packed 1 dozen in Carton.

Weight ½ lb.

Suggested List .50 ea.

"STAG LUBRICANT PRODUCTS"

"THE FINEST FOR MODERN GUN MAINTENANCE"

Staglube Grease

No. 306

Finally a grease has been produced that will cover the entire outdoor field. A lithium based grease developed for firearms and fishing reels having all the qualities required for each. Acid free, non gumming, rust inhibitor with a tremendous temperature range. The finest grease available.

Packed 1 dozen in carton. Weight ⅝ lb.

Suggested List .35 ea.

Stag Clean-N-Polishing Cloth

No. 312

Two SILICONE cleaning and polishing cloths, 192 square inches. These two cloths prevent finger prints, rust and corrosion leaving a soft lustrous finish.

Packed in poly bag one dozen to a carton. Weight ¾ lb.

Suggested List .75 ea.

Stag Economy Gun Cleaning Kit

No. 321

STAG'S Standard Kit now containing Stag Lube. A most reasonable priced Kit, Contains gun oil, nitro powder solvent, Stag lube and patches. The necessities for field and storage care.

Weight 7½ lb. Packed 1 doz. to carton.

Suggested List 1.25 ea.

Stag Stock-N-Blue Kit

No. 322

A kit for the complete refinishing of your firearms. The Stock-N-Blue kit includes the Gun Stock Finish and the Gun Blue plus pads of 3/0 steel wool and cotton waste. If used as per instructions these components will make an old gun like new.

Weight 7 lbs. Packed 1 dozen in Carton.

Suggested List 2.00 ea.

Stag Clean-N-Blue Kit

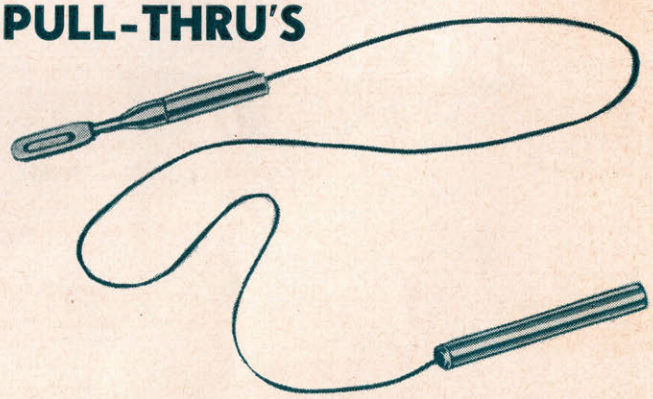
No. 323

This kit contains Pre Blue and Gun Blue plus a pad of 3/0 steel wool and cotton waste. Regardless of how badly rusted or pitted it is now possible to refinish the metalwork of your gun to look like new. The Pre Blue cleans and removes rust and the Gun Blue reproduces a factory-like finish.

Weight 7 lbs. Packed 1 dozen in Carton.

Suggested List 1.75 ea.

Stag PULL-THRU'S



No. 101 fits all calibres from .22 - .27. **Sug. List .65 ea.**
No. 102 fits all calibres from .30 - .45. **Sug. List .65 ea.**
No. 103 fits all gauges. - - - - **Sug. List .80 ea.**

Solid brass fittings with extra strong cord — individually packaged one dozen in attractive box.

The STAG line of Gun Cleaning Kits - shotgun and rifle in aluminum, brass and wood.

Deluxe Kits

Contains all the necessary equipment and materials for Modern Gun Maintenance, aluminum cleaning rod, improved frigidized gun oil, Staglube, improved nitro powder solvent, patches and brush with the Stag Gun Cleaning Booklet—in the new unbreakable plastic box.

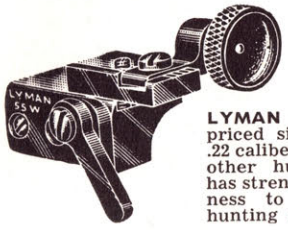
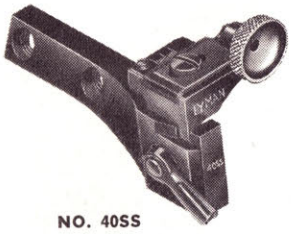
Lyman

METALLIC SIGHTS



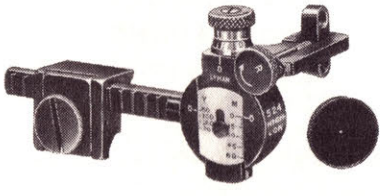
LYMAN NO. 55 is a low-priced sight for popular .22 caliber bolt action and other hunting rifles. It has strength and compactness to meet rigorous hunting requirements. **$5.25**

LYMAN NO. 42 is compactly designed and conveniently located to give increased sight radius. It has close elevation adjustment and the slide can be instantly locked in any desired position. Lateral adjustment is obtained by releasing aperture locking screw. Two screw holes only are necessary for mounting. **$6.95**

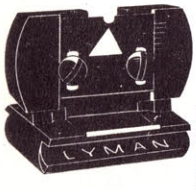


NO. 40SS

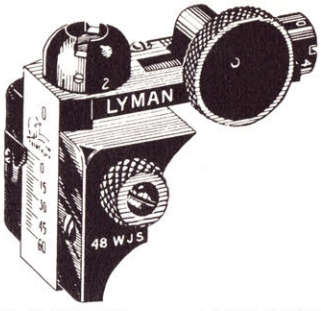
LYMAN NO. 40 has simple, strong design. By releasing locking lever slide can be easily and quickly adjusted for elevation. Elongated slot in aperture permits horizontal alignment. Gives sight radius of 30". Raising or lowering the slide one graduation gives a change in the center of the group approximately 5" at 100 yards. Windgauge graduations give a change of 2½" at 100 yards. **$6.95**



LYMAN NO. 524 is precision-made with positive windage and elevation adjustments. Telescopic line of sight..... **$21.50**

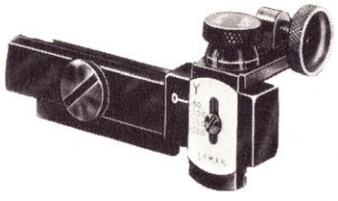


LYMAN NO. 16 MIDDLE SIGHT can be installed on barrel without interfering with scope mounting and serves as a primary rear sight and as an auxiliary sight for twilight shooting, or to check the alignment of receiver and front sight. Folds tight to barrel when not in use. Two heights: A (high), .400 to .500 high B (low), .345 to .445 high **$3.85**

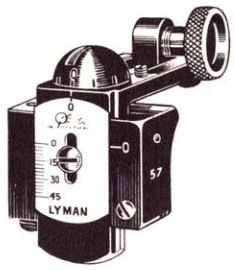


LYMAN 48 SIGHTS are precision instruments, designed and constructed to last a lifetime. They have rugged features for hunting, with accurate adjustments that make them equally at home on the target range. Exclusive features put 48 Sights in a class by themselves.

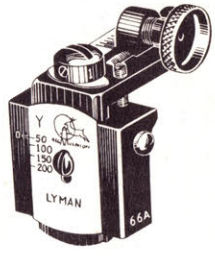
1. ¼-minute micrometer click adjustments for windage and elevation free of lost motion. Stayset knobs for hunting are optional.
2. Quick release of slide assembly for quick changeover to scope.
3. Dovetail slot for maximum strength and accuracy.
4. Adjustable zero scales for both windage and elevation. Elevation Stop Screw for locating elevation zero is provided for use in connection with the quick release feature. **$17.25**



NO. 60 SIGHTS — Brand new precision micrometer rear sights for use on popular medium-weight, small-bore target rifles. Feature positive-position windage and elevation screws with precision ¼-minute adjustments — and "Stay-tight" fit of extension arm and sight base. Quick-detachable extension rear sight permits choice of 3 positions of eye-relief. **$13.50**



LYMAN 57 SIGHTS feature modern, compact design and fit snugly on the receiver. They have ¼-minute micrometer click positive adjustments for both elevation slide and detachable target disc. Windage scale and elevation range plate can be zeroed. When the rifle has been properly sighted in, the slide can be removed and returned to the proper yardage line by means of the quick release feature. If the group is not centered only a click or two is necessary for adjustment. Choice of large knurled target knobs, or coin-slotted Stayset knobs for hunters. In every way, 57 Receiver Sights are unexcelled in the field of low-priced receiver sights. **$11.75**



LYMAN 66 SIGHTS are especially designed to fit lever and slide action rifles having flat side receivers. Sights fit close to the receiver for practical use, and good appearance. Located on the rear of the receiver, the aperture is conveniently close to the eye for "snap shooting," and provides a long distance between front and rear sights, so essential for accurate results. Extremely precise ¼-minute adjustments have distinct, audible clicks for easy sighting-in. The quick release slide allows this sight to be used interchangeably with a telescopic sight, without removing the sight base. Choice of target or Stayset knobs. **$11.75**

LYMAN COLOR FILMS FREE
FOR GROUP SHOWINGS

Lyman invites you to show these 16MM films without charge. Demand makes it necessary to limit to group showings. Order at least 30 days in advance as during peak periods bookings are dependent on our supply from:

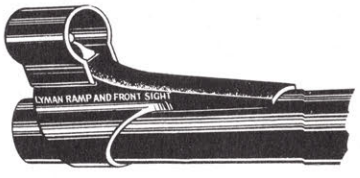
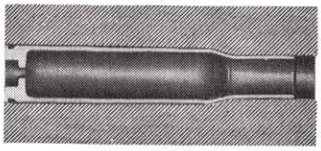
LYMAN SLOT BLANK replaces the factory rear sight when using a receiver sight or the front sight of a ramp when scope only is to be used. Beautifully machined and hand finished to gauge, this blank is indespensible for both dressing up the rifle and eliminating sharp edges. **85c**



LYMAN RAMP AND FRONT SIGHT
Converts military rifles into accurate performers for range or field shooting. Streamlined shape with the tail of the ramp in close, attractive contact with the barrel. Comes furnished with Lyman bead sight in position under the detachable hood. Choice of ivory or gold bead. Ramp diameters available: .550, .595, .605, .610, .620, .630, .640 inches.
Ramp Front Sight complete **$10.95**
Ramp only **8.50**
Hood only **35c**

RELOADING TOOLS



FULL-LENGTH RESIZING DIE When cartridge cases will not fit into the chamber without sticking, they can be resized easily with this die in a small vise. Ideal Size-Ezy Lubricant is useful when working brass cases.....**$4.80**

SIZE-EZY SIZING GREASE

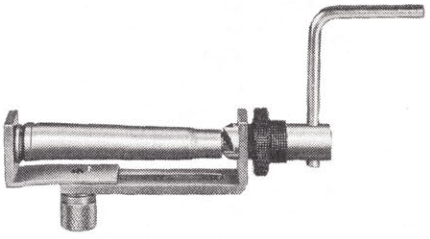
Makes for easy operation, perfect results in full length resizing **70c**

PRIMER POCKET REAMER

For removing rough metal edges in the primer pocket. Can be furnished for large or small primer pockets.... **$3.50**

SHELL CHAMFERING REAMER

Tapers the opening of the cartridge case mouth **$4.15**



CASE TRIMMER

Trims metallic cases to exact length desired. Each calibre needs a separate pilot rod **$9.75**
Extra pilot rods **$2.10**

POWDER FUNNEL

Transparent, takes all calibres... **$1.50**

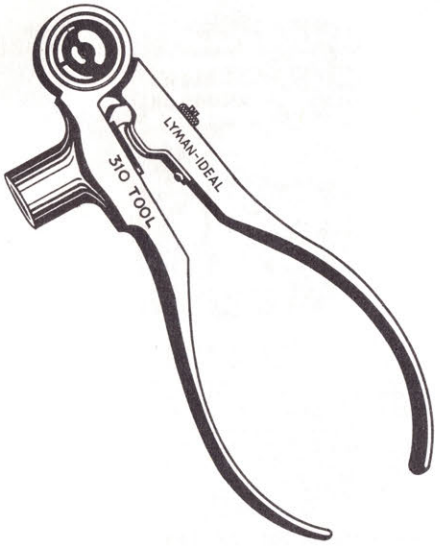
BULLET PULLER

Adapts to all calibres. Removes bullets without marring case or bullet...**$10.50**

BULLET CASTING SET has everything for casting and preparing lead alloy bullets for low-cost accurate cardridges. A wide choice of Ideal bullet designs is available for any type of shooting.

The Bullet Casting Set includes: an Ideal No. 45 Bullet Lubricator and Sizer with Sizing dies for one bullet style; a Single Cavity Bullet Mould for any solid base or point Ideal Bullet design desired; a Lead Pot; Lead Dipper; 3 lbs. of Bullet Metal; and Gas Checks when required. **$51.75**

LYMAN RELOADING TOOLS and DIES



IDEAL NO. 310 TOOL performs reloading operations on metallic pistol or rifle cartridges with Ideal dies. This low-cost portable tool is a favorite among smaller-quantity reloaders, and those who desire a complete reloading outfit that is compact and handy for use at the rifle range or a hunting trip. No. 310 Tool handles are equipped with an adjustable extractor hook so that many types of rimmed or rimless cases can be processed in the same handles.
The Adapter Die allows many cartridges to be reloaded in the same set of handles, since a correct-size adapter is furnished with each set of different cartridge dies.

NO. 310 TOOL
Handles (less dies) specify large or small **$ 6.90**

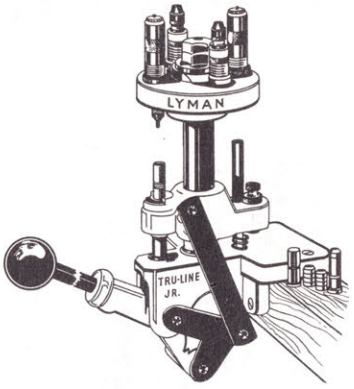
DECAPPING PINS

Fit All Ideal, Tru-line, All-American Dies
Package of 10 ..... **$1.50**



IDEAL TRU-LINE JR. bench reloading press produces accurate and reliable ammunition with a minimum of effort and time. It uses any standard Lyman Ideal dies, with the exception of the No. 310 Tool priming chamber. In place of this the priming punch and shell holder are used. Once the dies have been placed in proper position, hundreds of cases can be processed without changing the dies. The #55 Powder Measure can be mounted in turret along with dies.

TRU-LINE JR.
Tru-Line Jr. Press (less dies) **$23.95**

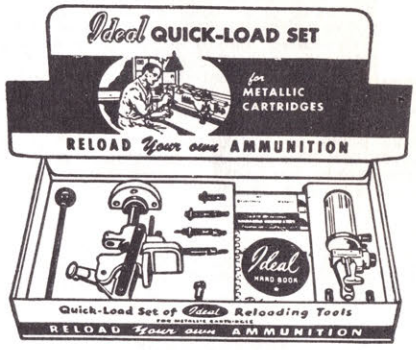
LYMAN AMMUNITION-MAKER is a low-cost kit that reloads ammunition and casts bullets. Contains mould in proved-performance bullet design for casting top accuracy bullets; famous Ideal 310 Tool and complete set of reloading dies and bullet-size chamber for one particular caliber; lead ladle, powder charge measure, loading block, and illustrated instruction manual. All the equipment you need to turn out complete ammunition at low cost!

Available in .222 rem., .243 and .244, .257, .270, .30-30, .308, .30-06, .303BR., .300 Sav., .38 Spec., .357 Mag., .44 Spec., .44 Mag., .45ACP, .45 Colt. **$34.50**



QUICK-LOAD SET was designed to produce large quantities of accurate rifle or pistol ammunition in a short time. The complete set of dies can be mounted in the turret head and, when progressing from one stage to the next, the reloader merely rotates the turret to bring the desired die into operation.
Set contains: The Ideal Tru-Line Jr. Reloading Press, a complete set of dies for one particular caliber; an Ideal No. 55 Micrometer Powder Measure; and a complete edition of the latest Lyman Reloading Hand Book.

Any rifle or pistol calibre **$63.50**

IDEAL ECONOMY SET contains a complete set of tools for reloading one particular caliber. The sturdy No. 310 tool with precision dies is packaged with the accurate Ideal Powder Measure and the latest hand book on reloading. With this equipment the beginner can easily learn to reload his own rifle or pistol cartridges safely. **$46.00**

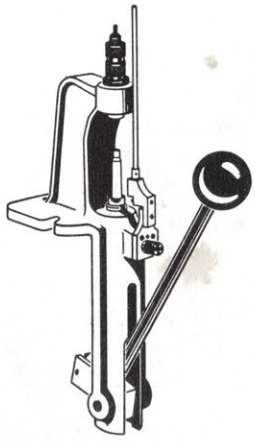
LYMAN RELOADING TOOLS and DIES



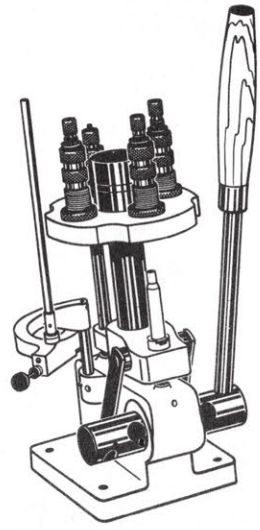
LYMAN ALL-AMERICAN COMET RELOADING PRESS quickly and accurately reloads rifle, pistol, and shotshell cases All operations from full-length case sizing or bullet seating are performed. The Comet can be used with upstroke or downstroke pressure by a simple adjustment of the handle lever bar. The optional "Slip-in" primer feed automatically drops a primer into the proper spot so the reloader never has to slow down.
All-American 7/8" x 14 chrome dies are used in this press, or Ideal Dies with a 7/8" x 14 Adapter Die. The All-American Comet is truly a remarkable buy with its ruggedness, versatility, and low cost.

ALL-AMERICAN COMET

A. A. Comet Press (less dies) $33.50
Slip In Primer Feed for A. A. Comet Press ..... $ 7.95

ADAPTER DIES

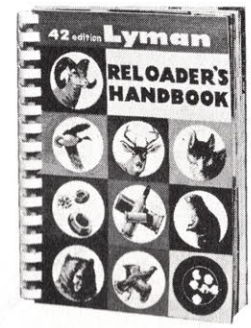
Make it possible to use Ideal 310 and Tru-Line Jr. Dies in A.A. Presses.
7/8" x 14 ..... .70c



LYMAN ALL-AMERICAN TURRET RELOADING PRESS is the champ for reloading rifle, pistol, and shotshells, the easy way. By combining maximum speed with maximum ruggedness, fine ammunition is produced fast and accurately. The die turret head permits complete reloading of a cartridge without removal from the shell holder. There's even a turret station for the No. 55 Ideal Powder Measure with the new threaded drop tube.
In every detail the Turret is a "dream": tremendous power for all operations; reversible handle for upstroke or downstroke; quick-change in operations with adjusting dies; optional "push-button" primer feed.
All-American 7/8" x 14 chrome-plated dies are used in this press, or Ideal Dies with a 7/8" x 14 Adapter Die.

ALL-AMERICAN TURRET

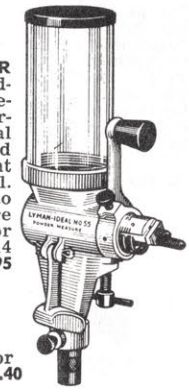
A. A. Turret Press (less dies) $67.50
Push-Button Primer Feed for A. A. Turret Press 11.95



LYMAN RELOADING HAND BOOK with ten big color sections blankets every phase of shooting. It's easy to learn how to reload your own custom ammunition and save money. Two hundred pages of fascinating facts and data on reloading ammunition for rifles, pistols, shotguns; making bullets; muzzle loading; international shooting. The bible for hunters and target shooters!
Lyman Reloading Hand Book No. 42 (packed in dozen lots with display)..... $2.25

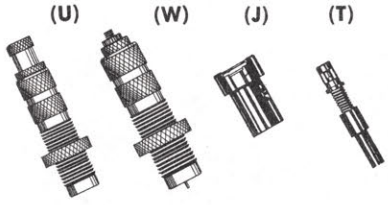
LYMAN HAND BOOK OF CAST BULLETS is a must for every serious shooter! Traces the fascinating history of bullets. Presents the most complete data and facts ever assembled on how to cast bullets for every need. You'll discover how you can make your own bullets at a fraction of normal cost, that outperform anything you can buy! $2.25

IDEAL NO. 55 POWDER MEASURE has precision adjustments for measuring desired powder charge accurately. Handles all commercial powders, both black and smokeless, and transparent chamber shows powder level. Drop tube is threaded to allow mounting the measure in the Tru-Line Jr. turret or other presses with 7/8" x 14 adapter. $21.95



Extra Drop Tubes—Large or small $1.40

ALL-AMERICAN DIE SETS 7/8" x 14



RIFLE DIE SET includes (T) Priming Punch, (J) Shell Holder, and Reloading Dies (U) and (W).

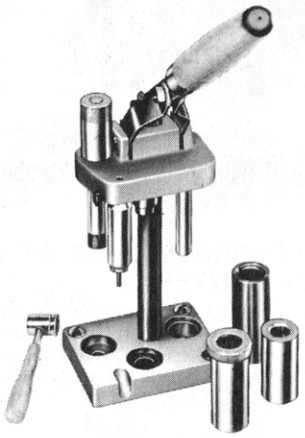
LYMAN SHOTSHELL RELOADING EQUIPMENT

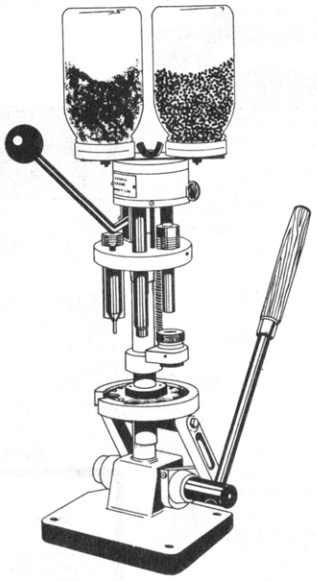


THE VANDALIA SHOTSHELL RELOADING SET

Fast—Turns out 50 to 75 units per hour. Completely new, this high speed shotshell reloading outfit is especially designed to produce large quantities of precision shotshell handloads. Here is a powerful bench press which performs all operations, including full-length resizing, with equal ease and speed. Accurate wad-seater pressure gauge is built in — assures precise seating of wads so necessary for uniform performance from shell to shell. The new VANDALIA also features a newly designed crimping plug which produces perfectly finished shells even for the beginner.

This press converts readily from one set of shotshell dies to another. The new VANDALIA die sets are available in 12, 16 and 20 for 2¾" shells using "New Style" crimp. Die sets for 12 and 20 gauge also reload the 3" Magnum shells **$42.95**

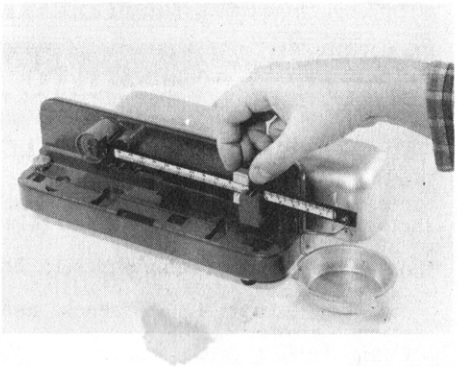
Dies to convert to another gauge **$11.95**



Lyman

GRAND AMERICAN PROGRESSIVE SHOTSHELL RELOADING PRESS

Easiest shotshell reloading "assembly-line" press you ever operated. Six separate steps on six separate shells at six individual stations take place SIMULTANEOUSLY with each single stroke of the operating handle. Press is delivered with all dies and powder and shot hoppers complete. Metering is accomplished by bushings set in openings in meter-disc. You get favorite 12 gauge bushings set for 23 gr. Red Dot powder and 1⅛ oz. shot. **$144.95**



OHAUS PORT-A-WEIGH

Magnetic damper — speeds weighing by minimizing beam oscillations. No oil well to become clogged or to spill. 560 grain capacity allows user to weigh large shells. Deep dish pan with pouring spout. Leveling screw in base. Almanox bearings retain accuracy for life of scale. Self contained carrying case — Easy portability can be used anywhere. **$26.95**

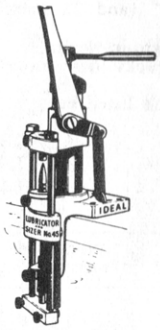
REDDING POWDER AND BULLET SCALE

Combines accuracy, ease of operation, attractive appearance and low cost. Particularly useful in checking the charge thrown by the No. 55 powder measure. **$18.95**

ADJUSTABLE POWDER AND SHOT DIPPER

For measuring bulk smokeless and black powder (ingrains) as well as lead and copperized shot (in ounces) **$2.75**

BULLET CASTING EQUIPMENT



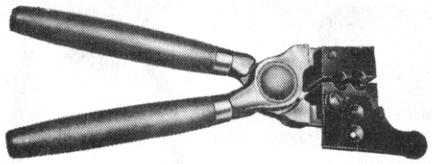
IDEAL NO. 45 LUBRICATOR & SIZER prepares cast bullets for use by reducing their diameter to correct size and adding lubricant to their grooves to prevent barrel leading. It lubricates, sizes and seats a gas check, when required, all in one operation. It's very fast, powerful and precisely accurate. Sizing dies are changeable for different diameters.

No. 45 Lubricator and Sizer (less Die H and Punches G and I)... **$24.00**
Die H and I (State Bullet) **4.85**
Top Punch G—(State Bullet) **2.10**
Lubricant Stick for bullets ..... **.85**
Colloidal Graphite Lubricant Stick **1.00**

No. 310 Bullet Sizing Die performs the same sizing operation as the No. 45 sizer —but is designed for use with the portable 310 tool.

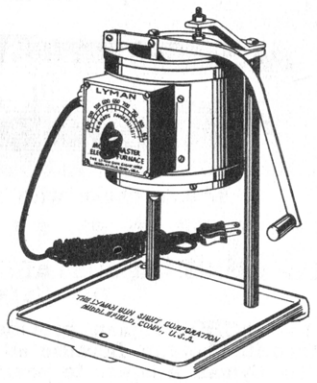
310 Sizing Chamber and Plug **4.15**
Sizing Chamber only **2.70**
Plug only **1.45**

KAKE KUTTER—Cuts excess lubricant off cast bullets **1.40**



IDEAL SINGLE, DOUBLE and 4 BULLET MOULDS are strong, lightweight, cool and easy to handle. Mould blocks for hundreds of different bullets are available. Precision machining and finishing to closest tolerances allow bullets that are uniformly perfect. The Double Cavity Mould casts two bullets at each pouring —the Four Cavity is ideal for fast production.

Single Cavity Block Only **$9.00**
Hollow Point or Hollow Base... **13.75**
Single Cavity Handles **4.85**
Double Cavity Block Only **13.75**
Two different Cavities **17.25**
Double Cavity Handles **4.85**
Four Cavity Blocks Only **22.00**
Four Cavity Handles **4.85**
Note — Double Cavity and Four Cavity not available for Hollow Base or Hollow Point Bullets.
Gas Checks 22 to 38 caliber per 1000 ..... **5.25**
Gas Check 44 & 45 caliber per 1000 ..... **5.50**



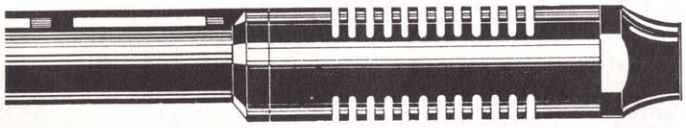
LYMAN MOULD MASTER BULLET-CASTING FURNACE

Large capacity and thermostatically controlled even heat assures uniform quality and high output. Bottom spout designed for easy pouring, offers positive control of metal dispensed. 115 Volt A.C.-D.C., 1000 watts, thermostatically controlled from 425 to 875 degrees fahrenheit. Capacity 11 lbs. Portable for easy handling, storage **$59.95**

LEAD DIPPER handles easily, stays cool, holds just the right amount of metal. **$2.10**

LEAD POT **$3.50**
LEAD POT HOLDER **$1.40**

CUTTS COMPENSATOR



FOR SKEET TRAP FIELD SHOOTING

Perfect patterns with choice of smooth-bore or adjustable tubes. Maximum recoil reduction and consistently uniform shots for 12, 16, 20, 28 gauge and .410 bore. Choice of steel or aluminum.

Cutts Compensator complete set; body with silver front sight,
Adapter (except .410), Wrench, and choice of one smooth-bore
Comp Tube $22.50
Cutts Compensator with Adjustable Tube 31.50

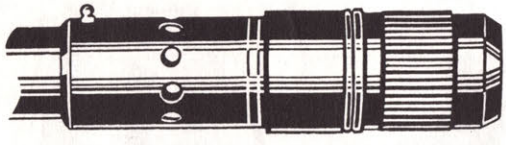
LymanCHOKE



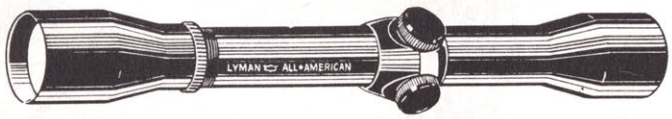
Lyman choke with recoil chamber

NEW QUICK ADJUSTABLE FOR ALL KINDS OF GAME!

New LymanCHOKE plan provides 2 systems for choking your favorite shotgun. Because **all parts are interchangeable,** you affix Lyman Adapter to your gun, and you have choice of elements to add. Either thread on LymanCHOKE Adjustable with or without Recoil Chamber . . . or, attach Lyman Single-choke Tube which provides individual choke pattern suited to your needs. For instance, if geese and ducks are your meat, Lyman Adapter and Long-Range Tube offer an economical package. If you use your gun for many purposes, Lyman Adapter, Recoil Chamber and LymanCHOKE Adjustable is your best bet. Available 12, 16 or 20 gauge.

Lyman choke with recoil chamber—Adjustable..... $20.75
Lyman choke without recoil chamber—Adjustable.... $17.25
Recoil Chamber only ..... $ 3.50
Adapter only ..... $ 2.75
Single Choke Tubes ..... $ 4.50
Long Range (full choke); Upland (Imp. cyl.) all purpose (modified)
Adapter Sizes: 12 gauge: .795, .812, .825, .840; 16 gauge: .740, .765; 20 gauge .690, .715.

LYMAN All-American



LYMAN "ALL-AMERICAN" SCOPES WITH "PERMA-CENTER"

Unique system now keeps crosswires permanently centered optically. Achromatic ground, aherrotion-free lenses are coated both sides for maximum (86%) light gathering qualities. Users get perpetual accuracy, lifetime ruggedness and dependability with the new All-American Perma-center hunting scope.

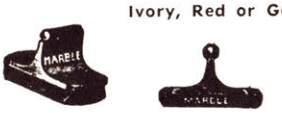
MARBLE'S SIGHTS

STANDARD FRONT SIGHT

Ivory, Red or Gold Bead



Handsome and well made. The ivory beads are from whitest elephant tusks. The lustrous Pope's Island Gold beads are visible in dim light. Also, available with red ivory beads for use on snow. For all American made rifles, in 1/16 and 3/32 inch beads with flat face which do not reflect the light. Order by number.

Standard Sight **$2.10**

MARBLE-SHEARD "Gold" Front Sights

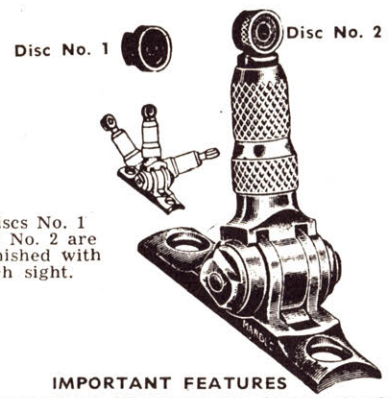
Guaranteed to show up well in the darkest timber, under any and all circumstances, and not to "blur". Order by number.

Sheard Sight—with medium bead, each .. **$4.20**

SLOT BLANK

No. 87—For standard slots .. **$ .75**
No. 87S—For Stevens and Savage rifles with 5/32" slots ..... **.75**
No. 87A—For Rem. Nos. 8 and 81 Auto Loaders ..... **.90**
No. 87R—For Standard Slot. Rounded top ..... **.90**

FLEXIBLE REAR SIGHT



Discs No. 1 and No. 2 are furnished with ch sight.

IMPORTANT FEATURES

Automatic Joint. Whenever the sight is struck on front or back, the coiled spring in the hinge brings it constantly into position for shooting. Can be locked down.

Elevation Lock. The lower sleeve, when turned up against the elevating sleeve, prevents it from being turned and holds the disc stem true and rigid at any elevation.

Interchangeable Discs. Discs having various sizes of outside diameter and different sizes of apertures can be used.

Flexible Rear Sight **$9.75**

For Remington Rifles (Not Flexible)

They cannot be made with flexible joint because they must be made low, but they have all other features of Marble's flexible rear sights. They can be folded down to tang. Furnished with Discs Nos. 1 and 2 having different apertures and proper screws for attaching sight to gun.

No. R7—For Models 12 & 121. .22 repeater **$8.50**

Super Light

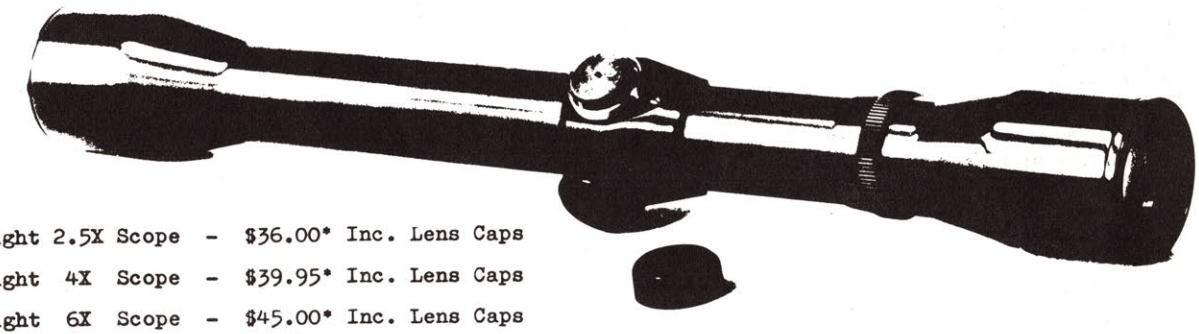
HUNTING SCOPES

Canada's lowest priced scopes with permanently centred reticule, designed and engineered to specifications for Canadian hunting conditions.

FEATURES OF SUPERLIGHT SCOPE

1. Light Weight - 10 ounces.
2. Finest precision ground, hard coated lenses.
3. Brilliant illumination.
4. Wide field of vision.
5. Micrometer adjustments, positive and easily adjusted by thumb and finger.
6. Fixed reticule; the most important development in scopes in recent years. The crosshairs remain constantly centred, even when adjustments are made for windage or when mounting holes are not properly aligned, or when barrels are out of line.

ASK YOUR DEALER TO SHOW YOU HOW IT WORKS



Superlight 2.5X Scope - $36.00* Inc. Lens Caps

Superlight 4X Scope - $39.95* Inc. Lens Caps

Superlight 6X Scope - $45.00* Inc. Lens Caps

* With Crosshair reticule only

Post & Crosshair reticule available in all scopes - $2.50 extra

Dot reticule available in all scopes - $6.00 extra

Power	Field of View 100 yds.	Tube Dia.	Length	Relative Brightness	Eye Relief	Eye Piece Dia.	Objective Tube Dia.	Weight
2.5X	42 ft.	1 in.	11-5/8	164	3	1.44	1.5	9½ oz.
4X	30 ft.	1 in.	11-5/8	64	3	1.44	1.5	10 oz.
6X	20 ft.	1 in.	11-3/4	28	3	1.44	1.5	10 oz.

HOW TO CHOOSE THE PROPER SUPERLIGHT SCOPE FOR YOUR HUNTING NEEDS

The 2.5X Superlight is used primarily for short to medium range for big game hunting. It has a large field of vision for quick aim on running game. It has a large objective lens with exceptional light gathering qualities when shooting in brush or in fading light.

The 4X Superlight is used for big game shooting in open country. It has enough field of vision for running shots and sufficient magnification for long shots, but can also be held steady for quick off-hand shots. A fine all round scope for big game and for medium range varmint hunting.

The 6X Superlight is a varmint hunter's scope. Clear and distinct for those long range shots. This is the scope to use when extreme accuracy is needed to kill Crows, Woodchucks, and other small game at extreme ranges. This scope is used often by big game hunters in the mountain or on the plains, where game is stalked and many times shot at very long ranges.

WEAVER SCOPES

Here's the most complete line of scopes and mounts on the market today—and it's the line with the most advanced features, too. You'll find a Weaver-Scope that's just right for any type of hunting and shooting—at a price to fit any budget.

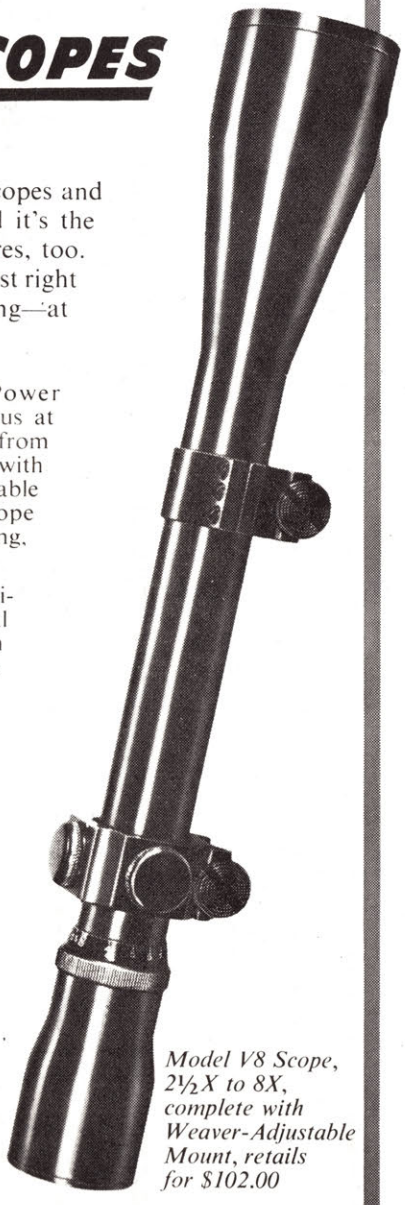
THE ALL NEW V8 Variable Power Weaver-Scope is always in sharp focus at any full or fractional power setting from 2½X to 8X. Instant power change with one-third turn of eyepiece. First variable power scope with unobstructed scope tube—no turret, no power change ring, no joints.

All lenses are hard coated. New Multi-Range Reticle available at additional cost. Compression sealed and nitrogen filled. Sold only equipped with the New Weaver-Adjustable Mount; no extras to buy.

MODEL K WEAVER-SCOPES are the choice of experienced hunters everywhere. All K Models (except the K1) have the fixed reticle with internal adjustments.

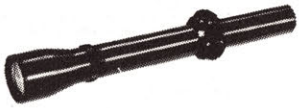
MODEL J WEAVER-SCOPES are quality hunting scopes with long eye relief for use on high-powered rifles—yet they're moderately priced.

MODEL B WEAVER-SCOPES are ideal low-priced scopes for .22's and other rifles of light recoil. On and off in seconds with the Weaver Tip-Off Mount.



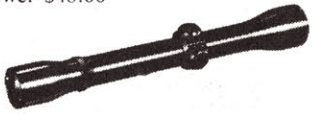
Model V8 Scope, 2½X to 8X, complete with Weaver-Adjustable Mount, retails for $102.00

K1 • 1-Power $44.00



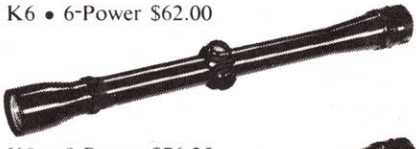
K2.5 • 2½-Power $48.00

K3 • 3-Power $48.00



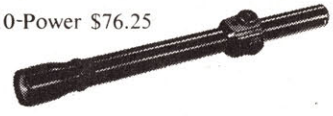
K4 • 4-Power $57.50

K6 • 6-Power $62.00

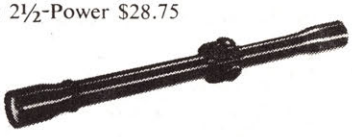


K8 • 8-Power $76.25

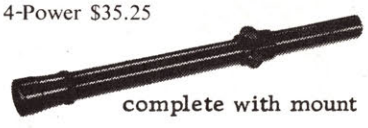
K10 • 10-Power $76.25



J2.5 • 2½-Power $28.75

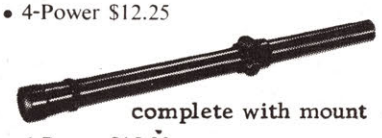


J4 • 4-Power $35.25



complete with mount

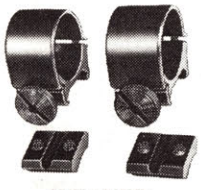
B4 • 4-Power $12.25



complete with mount

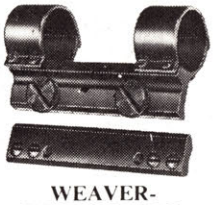
B6 • 6-Power $15.80

$13.10



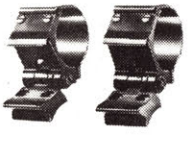
WEAVER-DETACHABLE TOP MOUNT

$13.10



WEAVER-DETACHABLE SIDE MOUNT

$16.85



WEAVER-PIVOT MOUNT

These three popular Weaver-Mounts, with split rings, are all made in three diameters: ¾″, 1″, and 1.023″
